The Canadian Shipbulding Company successfully launched for the Niagara Navigation Company last Saturday the latest addition to their fleet, the steamer "Cayuga." This handsome and roomy steamer will be propelled by twin screws, having engines capable of nearly 4,500 horse-power, of a speed of 22½ miles an hour. Her length is 318 feet, and her carrying capacity over 2,000 tons. She will have a permit, we are told, for 2,000 passengers.

More details are to hand regarding the Canadian Southern Railway, which recently filed incorporation articles at Pierre, S.D., and the capital of which is fixed at $50,000,000. The line is to run from Winnipeg through North Dakota, South Dakota, Nebraska, Kansas, Oklahoma and Texas to Galveston. It will cross the Missouri river at Pierre, and will have branches running through other parts of South Dakota. The incorporators include E. A. Hill, of Galveston; P. E. Gilegan, Highmore, S.D.; A. P. Sawyer, Elias Jacobson, and others, of Pierre.

Figures have come to hand of the shipments of ore last year from the Cobalt district of Northern Ontario, which aggregated 2,144 tons from seventeen mines. They were: Silver, 2,441,421 ounces, valued at $1,355,306; cobalt, 118 tons, valued at $100,000; nickel, 75 tons, valued at $10,525; arsenic, 549 tons, valued at $2,693, an aggregate value of $1,448,524. The returns in value would have been larger but for the fact that during the latter part of the year the ore sellers received nothing for cobalt, nickel or arsenic, the buyers declining to pay for those ores on the ground of the difficulty in treating them. The Canadian Copper Company now have a plant in operation at Copper Cliff for treating these ores, and, another company having bought the old Hoepfner refining works at Hamilton is now installing a modern. plant there.

BRITISH COLUMBIA AGENCY REQUIRED
By commercial traveller who has represented a leading Canadian manufacturer for fifteen years—Either Clothing or Dry Goods. Address Commercial Agent, Box 29, Victoria, B.C.

The linemen and groundmen employed by the British Columbia Telephone Company in Vancouver last week went out on strike for a recognition of union principles.

The new plant of the Singer Sewing Machine Company at St. John's, Que., was opened amid celebrations last week. It is an immense affair, believed to be one of the most complete institutions of its class in the world, comprising over twenty buildings, and turning out every part of the machines. When complete the capacity of the new factory will be in the vicinity of 150,000 machines per year.

A proposal is said to be under consideration for the construction of an extension of the telegraph line in connection with the Duluth, Virginia and Winnipeg Railway by way of International Falls, Minn., to the Canadian boundary line, where it would connect with the telegraph line of the C.P.R.

The Dominion Government statistics are to hand for the canal traffic for the year 1904. The Welland Canal was used during the season of navigation by 299 Canadian vessels of 435,049 tons, and by 634 United States vessels, of 416,964 tons. The St. Lawrence canals were used by 8,674 vessels of 2,137,249 tons, of which 7,532 vessels, of 1,858,385 tons were Canadian, and 1,146 vessels, of 278,864 tons were American. The total amount of freight transported on Canadian canals in 1904 was 8,256,236 tons, a decrease of 947,581 tons, as compared with 1903. Of the total freight transported in 1904 no less than 3,478,687 tons was in transit between United States ports. This was about half a million tons less than the quantity transported from one United States port to another through the Canadian canals in 1903. Fifty-six Canadian and sixteen American vessels took cargoes of 11,085 tons of freight through the canals to Montreal intact in 1904. For the seasons of navigation of 1903 and 1904 all the Canadian canals were declared free, consequently no tolls were collected. Had the tolls previously in force been levied in 1904 the revenue would have been $291,676, which is some $64,000 more than was collected in 1902.

A project is under way to construct an electric railway from Petrolea through the townships of Sombra, Moore, Enniskillen to Sarnia.

The Canadian Pacific Railway has now completed the purchase of the North Shore Railway from Quebec to Aylmer, known years ago as the Quebec, Montreal, Ottawa and Occidental Railway, the amount of purchase price being $7,000,000.

* * *

TORONTO MARKETS.

Toronto, March 8, 1906.

Drugs and Chemicals.—Opium is still in the dull and rather uninteresting position that has characterized it for some time past. Quinine is very similar. Menthol is firmer, and so is camphor, which is rather a scarce article on the market just now. Some improvement is not unlikely in quinine owing to the reports concerning the coming sales at Amsterdam, which say the offerings will be much smaller than usual. A firm tone has set in for acetanilid. Glycerine is easy. Advices from New York say that the volume of business has been more than usually large during the past few days in general lines. Locally, the trade in Toronto and country districts is much as before reported, with a normal movement going on.

Dry Goods.—This week has seen a large influx to the city of out-of-town buyers in connection with the spring millinery openings, more extended reference to which will be found elsewhere in this issue. These visitors, as they usually do, have seized the occasion to look over general dry goods stocks, and many purchases have been recorded as a consequence. This for one thing has caused a noticeable activity in wholesale quarters. In no lines have these active conditions been more apparent than in the departments making a special feature of displays of novelties, umbrellas, parasols, ladies' neckwear, and other small fancy goods. The staple lines of goods have made but little change. They still retain a very firm tone, which is not weakened by any idea on the part of retailers that values are at all likely to drop, the advices coming to hand all telling an opposite story. Linens are very firm, a statement which applies to all branches, not only in dress goods, but in housekeepers' articles. Some complaints are heard—and they are increasing—of difficulty in obtaining delivery of goods, which seems to be becoming worse rather than better.

Flour and Grain.—Little business is being done in either flour or wheat. The prevailing quotation for ninety per cent. patents is $3.05, bid by exporters, but holders consider this scarcely enough under the circumstances. Oats is fairly firm, while other grains are more or less nominal as to prices current.

Hardware.—The only feature of interest is the strong position of glass, which was recently raised in price 5 per cent. by Toronto dealers. A report from Cleveland states that the manufacturers there have made another increase of 5 per cent., and that still further advances are expected. The coming of a glass factory into Canada, which is announced, is a piece of news of considerable interest to the trade. The volume of trade in general hardware lines being carried on by wholesale Toronto hardware merchants is considered very satisfactory by those concerned. Activity in the building trades is a fact which has helped. The iron and metal trades report a very brisk movement. Advices from England say, however, that last month was a disappointing one in the pig iron trade. Prices have steadily declined, and in fact since early January there has been a steady fall of about 2s. 9d. per ton in Scotch iron, and 6s. per ton in Cleveland. The production of pig iron is in excess of the demand, and stocks already heavy are increasing, although shipments are good. There is naturally but little business doing, buyers only covering their actual present requirements. The manufactured iron trade generally is, however, in fairly good condition. Copper has had a steady month, fluctuations being unimportant, and the value is only slightly lower; business is mainly for near positions, prices for forward delivery being considerably lower than for prompt. Tin also has been moving fairly well, being barely £1 per ton lower during the month; latterly there has been a good business, and the market steady. Spelter is about 20s. per ton lower, and is dull. Lead after falling 7s. 6d. has recovered 2s. 6d., and is at present steady.

Hides and Leather.—Our quotations for hides are a cent lower this week, while sheepskins have advanced another 10c. to 15c. An average trade is going on for the time of the year. No decline is likely in leather owing to the fall in hides, as the latter is due largely to the usual falling off in quality. In Chicago no further change has occurred in hides.

Groceries.—Refined sugars advanced in New York a few days ago ten cents per hundred, and the situation is stronger in sympathy in local markets. A distinctly firm tone has developed in currants, and other dried fruits are beginning to show an improvement in the demand. Canned vegetables continue strong. No special feature presents itself in respect to local and provincial trade, of which no particular complaint is heard.

Provisions.—There is considerable firmness in the values of choice butter, which is not coming forward in very large quantities. Cheese is firm, but presents nothing new in the situation. Eggs are firmer in keeping with the cooler weather and the usual increasing demand at this time of the year. Chickens are firmer.

MONTREAL MARKETS.

Montreal, 7th March, 1906.

Ashes.—The market continues lifeless, and, though spot supplies are in very narrow compass, quotations are barely steady at $5.15 for first quality pots; seconds, $4.60 to $4.65; pearls, about $7 per cental.

Cements and Firebricks.—With the approach of spring a little more interest is being developed in cements, and we quote Belgian makes at $1.90 to $2.10; English and Canadian, $2 to $2.20; firebricks, $18 to $23.

Dairy Products.—The butter market has developed some advance since last writing, more particularly in fancy creamery, of which there is a limited supply, and 23 to 23½c. is quoted for said grade; undergrades, 21½ to 22c.; dairy, 19½ to 20½c. The Liverpool cable is again a shade firmer on cheese, and local holders of desirable stock are firm in their ideas at from 13 to 13½c. per pound.

Dry Goods.—The millinery openings this week have brought in quite a respectable number of buyers in this line, mostly district merchants, with a fair sprinkling of visitors from far-away points, who all tell the same tale of shelves still pretty full of fall and winter stuffs, but their selections of spring goods are fairly liberal. City retail trade is brisker than last month, and general collections are moderately good. The 4th of the month was a comparatively light day, and some of the larger houses report from 75 to 80 per cent. of customers' paper as being met.

Groceries.—Following a strengthening in the raw sugar markets and an advance in refined in New York the local refiners have increased quotations on all their grades by 10c. per cental, making the present factory figures for standard granulated $4.10 in barrels, and $3.70 for No. 1 yellows in barrels. This advance has greatly stimulated the demand from jobbers, and one of the refining companies report that their sales for the past week have been equal to the total business of February. In molasses there has been no recent change, the latest cable from the island being 14c., first cost. Teas show a firm front, and blacks are reported dearer from a halfpenny to a penny. Stocks of dried fruits are getting within very narrow compass, especially Valencia raisins and small-sized prunes, and prices are firmer in some lines. Fine off-stalk Valencias are held in a jobbing way at 4 to 4¼c., and selected at 5 to 5½c.; ordinary Sultanas, 6½ to 7c.; fancy ditto, 8½c. Tomatoes are again advanced to $1.10, and corn is likely to go up in price at any moment. Tapioca is steadily advancing, and would now cost 6c. to lay down.

Hides.—Offerings of new lambskins are still very light, and the price is likely to remain at 10c. for several weeks. Calfskins are easy at 12c. per pound for No. 1, and 10c. for No. 2. For No. 1 beef hides; the general quotation is 10½c. per pound, with 11c. paid for occasional lots. There is no great amount of business doing.

Leather.—The movement is described as a moderate one, boot and shoe manufacturers not anticipating their wants to any great extent. No. 2 manufacturers' sole is firm at 25c.; No. 2 jobbing, 26c., and slaughter at 29 to 30c. All lines of black leathers are firmly held at last quotations.

Metals and Hardware.—The week has developed no special changes in these lines. Pig lead is again a little easier, and the present jobbing quotation is about $4.35. Antimony has become very scarce, and is held at 15¾ to 16c.; copper continues steady at 20 to 20½c.; tin, 39½ to 40c.; spelter, a shade easier at 7c. There has not as yet been any apparent weakening in iron values, as some seemed to anticipate several weeks ago, and English advices are all of a very firm tone. General quotations of bars, nails, sheets, etc., as given last week will hold at date.

Oils and Paints.—The quotation for genuine turpentine is very firmly held at 98c. per gallon for single barrels, but it is said there is a good deal of adulterated turpentine on the market, which can be had at lower figures. Linseed oil is unchanged at 55 to 56c. for raw, and the usual advance for boiled; castor, 8 to 10c. per pound, as to quality. Paris green, 17½c., in packages. Leads and putty remain at former figures.

Wool.—The next series of London wool sales opens on the 14th inst., when further stiffening of values is deemed not improbable. The business being done at the moment by importers here is of a very light character, but values are even firmer than a fortnight ago. Capes are quoted at 20 to 23c.; good B.A. is held at 40 to 45c., and low-grade crossbreds at 32 to 40c.; domestic pulled, 29c. Holders of North-West wool in Winnipeg are said to be asking 22 to 23c.

* * *

BELL TELEPHONE COMPANY.

The Bell Telephone Company held their annual meeting in Montreal on the 22nd ult. The chief announcement made was by Mr. C. F. Sise, the president, to the effect that the directorate contemplated increasing the capital stock of the company from ten to fifty millions of dollars, as already they had been hampered in extension work by lack of ready capital, the idea being not to issue all this new stock at one time, but as the increase of business made necessary new plans, new lines, and all that went to make up a telephone service in a country which was growing as fast as Canada is. The number of directors is also to be increased, one new one in the person of Mr. H. D. Warren, of Toronto, having already been appointed. In the old days an exclusively Montreal directorate was sufficient, but with the growth of the corporation's business in other parts of the country it is considered better to include men representative of all sections. Some reference was made to the Parliamentary investigation into telephone systems last year, and Mr. Sise was glad to be able to say that not a single thing had developed to cast discredit on the company. Some talk has been heard in Manitoba of the municipal ownership of telephones, Government ownership, etc., but the Bell Company purpose to go on doing business in that Province just the same. In fact, of the total sum of $2,000,000 spent on new work last year, no less than $600,000 had been spent in Manitoba.

The annual statement of the company showed that the gross earnings for the year had totalled $3,517,000, while the operating expenses had been

$2,615,000, leaving the net earnings at $902,000. During the year the sum of $1,910,000 was added to the plant and patent account, placing it at $11,184,000. During the year 12,035 new subscribers had been secured, and the number of the telephone instruments now earning rental was 78,195. During the year 4,871 miles had been added to the long-distance system, increasing the mileage to 37,000 miles. The election of directors resulted as follows: C. F. Sise, Hon. Robert MacKay, F. D. Fish, Robert Archer, William R. Driver, Hugh Paton, Charles Cassils, Thomas Sherwin, and H. D. Warren.

UNITED STATES FINANCIAL CONDITIONS.

Henry Clews & Co., New York, in their weekly circular of March 3rd, say: The speculative situation fails to show any improvement. There has been a noticeable dwindling of numbers in the bull ranks, and a waning courage on the part of those who have been conspicuous on that side of the market. The impression that the top wave in the securities market has been reached, for some time to come at least, is steadily growing, and from day to day it becomes increasingly evident that the technical situation has been materially weakened by liquidation quietly effected when the market was at its best in December and January. As prices decline there is a singular absence of inside support, even from the prominent leaders or insiders, who are popularly supposed to be on the bull side of the market. As a matter of fact, many of these gentlemen are convinced that the market must seek a lower level before any substantial inducements can be found for reinvestment or for the conducting of a fresh bull campaign.

At the moment the market is suffering somewhat from absenteeism; a large number of wealthy operators taking the respite from business responsibilities which is becoming so customary at the end of the winter. The absentee list, moreover, has been considerably swelled by the quiet disappearance of numerous individuals who wish to avoid testifying before the various investigating committees, which are not confined to New York alone, but are at work in Washington and other political centres. The investigation fever has had not a little to do with the present reaction in Wall Street. It has not only caused a good deal of personal anxiety among many of the responsible heads of corporations whose doings would not stand the glare of sensational publicity; but it has also made more difficult the promotion of new financial operations and is breeding a spirit of pessimism and personal animosities in the financial district, which more or less threatens the spirit of harmony that has prevailed during the last three or four years. New lines of cleavage are being formed and antagonisms created which sooner or later must show themselves in market operations. It is unnecessary to cite the friction and animosity which have been created by the insurance investigation, none of which was anticipated in the remotest degree a year ago. Nobody foresaw the consequences of disputes which began in the Equitable last summer; and, while the results eventually are certain to be beneficial to the public, and will unquestionably raise managerial standards, still the intervening period of agitation and readjustment is a disturbing one, impairing confidence temporarily and necessarily having an adverse effect in higher financial circles. The money market situation is still a cause of apprehension. Last week the surplus reserve was down to about $5,000,000—the lowest at this period in sixteen years. The loan account continues to show much expansion, and apparently nothing but enforced liquidation in the stock market will strengthen reserves. The interior demands for currency are large, owing to the activity of business, while farmers both South and West are holding on to their crops longer than usual. The result is funds are not returning with their accustomed freedom.

GOVERNMENT COMMISSION ON INSURANCE.

The names of the commissioners to investigate life insurance companies we gave last week. They are Messrs. McTavish, Langmuir and Kent. Appointment has since been made. Mr. I. F. Hellmuth, K.C., of Toronto, and Ald. G. R. Geary, also of this city, have been appointed by the Ontario Government to represent the policy-holders of Ontario before the Insurance Commission. It may be that others will be appointed to represent other interests. For instance, some of the life companies may wish to be represented, either severally or jointly.

The scope of the Royal Commission, as set forth in the order in council making the appointment, is as follows:

1. To enquire into (a) the general subject of life insurance and life insurance systems in Canada; (b) the operations of the various companies chartered by the Parliament of Canada, or by any Province, and licensed under the Insurance Act, transacting life insurance in Canada, including expenses of management, investment of funds and other allied questions.

2. To make the like enquiry, so far as deemed necessary, into the operations of companies other than those chartered by the Dominion or Provinces, transacting in Canada the business of life insurance.

3. To enquire into the operation of the laws of the Parliament of Canada relating to and governing the business of life insurance, both as regards Canadian companies and companies other than Canadian, and to consider and report upon any amendments thereto that may be deemed necessary.

4. That the Commissioners so appointed have power to employ expert assistance, to summon before them witnesses, and require them to give evidence, on oath, orally or in writing, or on solemn affirmation, if they are persons entitled to affirm in civil matters, and to produce such documents and things as such Commissioners deem requisite to the full investigation of matters hereinbefore referred to, and generally to exercise all the powers conferred by the said Act.

EVIDENCES OF ENTERPRISE.

The annual meeting of Thos. Ryan & Company, Limited, wholesale dealers in boots and shoes, was held at their office in Winnipeg last week, when the following shareholders were present: Thomas Ryan, George Ryan, T. D. McGee, Thomas M. Ryan, J. P. Clarke, A. McKillop, and W. J. Stevenson. The reports presented for the year showed, we are told, the largest volume of business in the history of the company, its results being very good.

The president outlined the company's policy for the coming year, which was endorsed by the directors, namely, that the authorized capital be increased to four hundred thousand dollars; that a modern warehouse be erected on the company's property on Princess Street, sufficiently large to handle their business, and that branches be opened in

dmonton and in Calgary early in the pring to enable them to meet the increasing demands of their Western trade. The officers elected for the ensuing ear were: President, Thomas Ryan; ice-president, George Ryan; secretary-reasurer, T. D. McGee. The board of directors consist of the above-named, and Thomas M. Ryan, J. P. Clarke and A. McKillop.

* * *

—A complaint has been made to me, says the writer of City Echoes in the "Drapers' Record," of London, and I seem to have heard it before, touching the substitution of new travellers for old. The buyer who makes it this time says that he has no objection to being "waited on" by a boy, so long as he is a good boy, and knows his trade. He adds, however, that few boys do know their trade, and the substance of his charge is that certain houses have now a habit of selecting very young men for trial on the road before they have had a sufficient experience in the department or departments which they are to represent—leaving them to gain that knowledge of the goods on their grounds. This sounds a severe trial.

Mercantile Summary.

At Moncton, N.B., the Maritime Woolen Manufacturers' Association met and discussed matters relating to the woolen trade. D. I. Welch, barrister, of that place, was chosen permanent secretary.

The American Window Glass Co. has decided on another raise of 5 per cent. in the price of window glass, effective March 5th. Several smaller manufacturers have followed suit. The Manufacturers' Glass Co., of Cleveland, the second largest makers of window glass in the States, have also raised prices. Possibly a still further advance will come. The position in the Canadian market is a strong one.

The annual meeting of the shareholders of Rhodes, Curry & Co., at Amherst, was held some days ago, when there were present the president, N. Curry; vice-president, N. A. Rhodes; secretary-treasurer, J. M. Curry, and the following directors: J. C. Robertson, Springfield, Mass.; Senator Mitchell, of Drummondville, Que.; B. F. Pearson, of Halifax; C. T. Hillson and J. R. Douglas. Mr. Victor G. Curry was elected a director to fill the vacancy caused by the death of the late Hon. T. R. Black. A dividend of 6 per cent. was declared on all capital stock. The report showed that the year's business had been a satisfactory one.

* * *

—The following are recent enquiries relating to Canadian trade received at the Canadian Government Office, 17 Victoria Street, London: A London metal firm desires names of Canadian producers and shippers of antimony. Received at the City Trade Branch, 73 Basinghall Street, London, E.C.: A London firm desires the names of Canadian makers of pick, shovel and hammer handles who can supply goods suitable for the South African market. A London firm wishes to secure the agency of a Canadian shipper of bacon, eggs and butter. A North Country manufacturer of fancy leathers, such as sealskins, walrus, dolphin, and also Levant Cape goatskins, would like to obtain a share of Canadian trade.

—There is a good deal of humor, intentional and unintentional, to be found in my solid and staid contemporary, the "Globe." I take the following paragraph from its issue of the 24th ult.: "We note in the 'London Gazette' for January 19th that Mr. Thirungeswaram Veerahadra Mudalliar, of Gangadareswaran Covil Street, Madras, has becom insolvent. Our sympathies are also ex tended to Messrs. Thumalapullee Nar singa Row, of Tholasingaperuma Street, Triplicane, and P. V. Aiyasawn Pillay. The case of Mr. Trichinopol Duraisawmy Pillai, a gumastah in th service of Venkatapathy Naidu, Choolay, is more explicable. Many time have we warned our old frien Trichinopoly, with tears in our eye not to become a gumastah, but he woul do it. It is significant that in many in stances these insolvent gentlemen live and had their being in a district calle Pursewalkum. Appropriate, in the ci cumstances."—Mercantile Guardian, Fe 21st.

The Mutual Life Assurance Co. OF CANADA.

has had another prosperous year as may be seen from the following table:

Insurance written in 1905..	$ 6,014,576

MANAGER FOR CANADA:
B. HAL. BROWN.

THE METROPOLITAN LIFE INSURANCE CO

(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the Peopl

ASSETS, $151,663,477.29

It exceeds by two millions the entire population of the Dominion of Canada. Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. It has on deposit with the Government of the Dominion of Canada, in Canadian securities, dollar for dollar of its Canadian liabilities. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec and Ottawa.

Significant Facts.

This Company's Policy-claims paid in 1905 averaged in number one for each minute and a quarter of each business day of 8 hours each, and, in amount, $105.83 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395 per day in number of Claims Paid.
6,972 per day in number of Policies Issued.
$1,502,484.00 per day in New Insurance Written.
$123,788.29 per day in Payments to Policy-holders and addition to Reserve
$77,275.94 Per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City

Amount of Canadian Securities deposited with the Dominion Governme for the protection of Policy-holders in Canada, over $3,000 000.00

More Than $7,000,000.

Over and above premiums received, more than $7,000,000 has already been paid or credited to its policyholders by the

GEO. WEGENAST, Manager.

DIRECTORS' REPORT

Your directors have pleasure in submitting for your consideration the thirty-sixth annual report for the year ending December 31st, 1905, together with the financial statement duly audited.

In every department, the business has been entirely satisfactory, and largely in excess of any previous year.

INSURANCE ACCOUNT.—The volume of new business was 3,637 policies for $6,014,576, being an increase over 1904 of 185 policies for $966,408. With the exception of $65,000 written in Newfoundland, the new business was all written within the Dominion of Canada. The total amount of assurance in force is $44,199,954, under 29,788 policies, being an increase over 1904 of $3,722,984.

INCOME.—The total income for the year was $1,956,518.91, derived from premiums $1,547,506.45, interest and rents, $407,563.94, and profit from the sale of real estate, $1,448.52.

PAYMENTS TO POLICYHOLDERS.—The payments to policyholders consisted of death claims, $231,924.10; matured endowments, $159,450; purchased policies, $64,168.88; surplus, $87,928.85, and annuities, $9,422.56; being a total of $552,914.19. The death claims which fell in during the year amounted to $269,214, and, though slightly in excess of those in the preceding year, were very light and much below the expectation.

THE EXPENSES AND TAXES were $348,491.76, and profit and loss, $1,519.18, making a total of $350,010.94; or 17.8 per cent. of the total income.

ASSETS.—The cash assets at the close of the year were $8,846,658.42, and consisted of mortgages, $4,265,533.86; debentures and bonds, $3,245,401.89; loans on policies, $988,670.39; premium obligations, $28,810.60; real estate, including the head office building, $56,281.08; and cash in banks and at head office, $261,960.60. Adding to this the due and deferred premiums, $272,121.08, interest and rents dueand accrued, $177,312.65; the total assets amount to $9,296,092.15. It will be observed that, as in the past, we still continue to invest our funds in securities of a non-speculative character, and that we hold them on our books at their net cost.

The interest on our investments has been very well met, especially in the city of Winnipeg, where on mortgages amounting to $745,555 the interest in arrear at the close of the year was only $227. In the Province of Manitoba and the West generally, there is a tendency to defer payment of instalments of principal on account of the desire to purchase more land. All payments both for interest and principal have, however, been very well met, and were quite equal in that respect to the previous year. In Ontario and elsewhere the mortgage collections have been exceptionally good, and at the close of the year there was interest in arrear of only $16,317, the largest part of which fell due in the closing days of the year, and has since been paid. The active demand for money during the year kept our funds well employed at good rates of interest. The average rate realized on our funds was 5.1 per cent.

THE LIABILITIES were again computed on the same standard as in former years, namely; Combined Experience Table with 4 per cent. interest for all business up to January 1st, 1900. From that date to January 1st, 1903, on the Institute of Actuaries Table with 3½ per cent. interest; and thereafter on the same table with 3 per cent. interest. The reserve computed upon this standard of valuation amounts to $8,210,064.24, and the total liabilities are $8,342,091.03. The surplus over all liabilities on the company's standard of reserve, as above mentioned, is $952,001.12, being an increase for 1904 of $179,928.25. On the Government standard of valuation our surplus would be $1,261,905.

As in former years, the executive committee has examined all the securities and verified all the entries relating to them on the company's books.

On behalf of the Board, R. MELVIN, President.

The various reports having been adopted, the retiring directors, Robert Melvin, Sir F. W. Borden, W. J. Kidd, B.A., and Wm. Snider, were unanimously re-elected. After a number of able and thoughtful addresses had been made by members of the board, prominent policyholders and others, the meeting adjourned.

The directors met subsequently and re-elected Mr. Robert Melvin, president; Mr. Alfred Hoskin, K.C., first vice-president; and the Hon. Mr. Justice Britton, second vice-president of the company for the ensuing year.

(Booklets containing full report, comprising lists of death and endowment claims paid, of securities held, and other interesting and instructive particulars, are being issued, and will in due course be distributed among policyholders and intending insurants.)

Waterloo, March 1st, 1906.

W. H. RIDDELL, Secretary.

IMPORTANCE TO ONTARIO OF HUDSON BAY.

Fourth Paper.

3. Prompt, up-to-date transit facilities extending to the great Canadian sea via Ontario will add more to the prestige and influence of this Province than any railway of like cost in its history.

For this wealthiest Government and people in the Dominion to delay commercial access to the great Canadian sea until some other Province can claim that honor will be a stigma and reproach upon this generation of Ontario citizens, which will go down in history as an indefensible blunder. (The extracts from a leading Montreal journal to be found on a following page afford proof of this conclusion.)

That this danger is imminent a telegram from Winnipeg, as published in Toronto at same date, and copied in annexed note, will indicate:

> Winnipeg, December 1st, 1905.—With three railroad companies moving towards Hudson Bay, the eyes of all shippers in the Middle West are turned toward the great inland sea.
>
> The Canadian Northern has surveyors in the field running a line from Prince Albert, in Saskatchewan, to Fort Churchill, on the shores of the Bay.
>
> A mysterious company, known as the Manitoba and Midland, is now letting contracts for construction from a point on the Manitoba and American boundary line to Portage la Prairie, and surveyors are running lines north of that town in the direction of the Bay.
>
> Further west in Manitoba a company known as the Brandon, Saskatchewan and Hudson Bay is having surveys made from Devil's Lake, N.D., due north, and active construction on the grades will likely begin within the next few months. There is also some mystery in connection with the promoters of this line, as the incorporators are all employees of the Northern Pacific.

4. The proposed railway route will be the most important "colonization road" of its length yet projected in Ontario.

It will traverse the most isolated section of the Province for 250 miles, and open access to the northern boundary of the same along the Albany River, where steamer transit is practicable, with but two breaks by falls between the sea and Lake St. Joseph, a distance of over 450 miles, the last-named lake being over seventy miles long. Regular steamer service for the whole waterway will doubtless soon follow railway access to the river now only reached by canoe. At present there is not an agricultural settler, or industrial settlement, or public road, or school within fifty miles of the railway line, or of the river, except near the C. P. Railway along the lake shore, and possibly at one or more of the five Hudson Bay Fur Company posts in that immense district, which totals over 47,500 square miles, equalling thirty millions of acres of land, not counting 22,500 square miles in the fifty-mile belt north of the river in Keewatin territory, which it will practically annex to Ontario for commercial purposes.

5. Also the opening of commercial access to the Sea Food Resources of Hudson Bay will reduce the price of lake fish for Ontario housekeepers at least one-third, at a saving to them of at least one million dollars annually. It is well-known that the lake fishery product is mainly in the control of "trusts," which force the price paid to fishermen downward and that paid by marketmen upward, taking the cream of profit of the industry into a few hands outside of the Province, the only remedy for which is to enlarge the area of supply where competition can exist. Present prices of fish in the Provincial market are almost prohibitory.

The appended extracts from Toronto newspapers indicate the situation. See notes:

> The "News," Toronto, Friday, December 1st, 1905:
>
> FISH WAS DEAR TO-DAY.
>
> The Supply was Small—How Housekeepers Pay Tribute to a Combine.
>
> Fresh fish was scarce to-day. Whitefish sold at 12½c. to 15c. a lb., and salmon trout at 10c. in cases, but generally at 12½c. a lb.

"Rather dear?" queried the "News."

"Too dear to my liking," replied the dealer.

"Talk about combines," said he, "the fish combine exacts money from the people every day. It keeps the fish supply down and the prices up. The worst of it is, it is a Yankee combine; in fact there are two of them, one in Detroit, and the other in Chicago. The late Government seemed to give these companies everything their own way, and the small fishermen had no show. It is quite time for the new Government to take a hand in the matter."

Fresh water salmon retailed to-day at 25 cents a pound, fresh haddock at 10 cents a pound, cod higher at 12½ cents a pound. Smelts were up to 15 to 20 cents a pound.

The "Mail and Empire," Toronto, Wednesday, February 7th, 1906:

INTEREST AROUSED IN OUR FISHERIES.

We know that about a million and a half dollars' worth of fish are caught in our lakes every year, that a handful of Canadians get a miserable living out of the industry, and that the Fish Trust pays some license fees for the privilege of depopulating our waters. The nets with which they are caught are not made in Canada; the gill nets come chiefly from Scotland, and the pound nets from the United States. About $25,000 is paid annually to overseers and guardians. The fish themselves are eaten in New York and other American cities. **For only five per cent. of the catch is consumed in Ontario.** As Mr. Harris says: "We have an expensive organization of clerks, 127 overseers, guardians, cruisers, patrol boats, and hatcheries distributing fry. With all this staff, outfit, and the accompanying expenditure, the people of Ontario cannot place a full-grown fresh water lake fish on their tables except as an occasional luxury." We are surely playing a losing game.

* * *

FIRE GUARDING.

It is time that the growing sentiment in favor of some systematized effort to restrict the fire-waste of Canada was crystallized into a measure or measures looking towards the investigation of fires and the punishment of those who either set them or by carelessness permit them. The States of Massachusetts and Ohio have notably set the example in the neighboring Union in appointing fire marshals with power to investigate fires and to secure the arrest of incendiaries. And the results of the action of these officers have in marked degree lessened the number of incendiary fires in those States, and also the number of fires from "unknown" causes. By their efforts, too, "fire-bugs" have been put in jail; and it is a gratifying fact that the precepts of these officers and their deputies scattered over the country have stirred up the public to look more carefully into the fire-inviting surroundings of their own dwellings and shops, and to pay more attention to the proper construction of buildings.

"Shall we have a fire marshal for Ontario?" was the question put to the writer the other day by a man who had studied the subject. And the reply was, "Why for Ontario alone?" Every Province and every municipality might appoint an officer to lessen the dreadful fire-waste and produce a vast economy over and above his pay. But if Ontario is to have a fire marshal, the great point is to get the right kind of man. Ohio is fortunate in securing as its fire marshal a man of wide knowledge and resolute skill. Massachusetts, too, has benefited by the occupancy of a like post by a man of ability and technical knowledge. We know of another State in the Union, however, which has a fire marshal whose political affiliations prevent his doing his duty lest he shall offend some person or persons who may have to do with his retention of office. Similarly, we have heard of a Canadian municipality which has fire commissioners who are of but little use for a like reason. Power of action by such officers must be centralized, else local friendships or local feuds would interfere with the administration of justice. Such are the dangers of political appointments.

The general manager of a fire insurance company in Edinburgh, Mr. James Allan Cook, in an address before the Insurance Actuarial Society of Glasgow, said the other day, dealing with fire-waste—which is far less serious in his country than in ours: "The time has come when this subject should be taken up seriously by the national and city authorities. In endeavoring to saddle insurance companies with charges of fire protection, municipalities are but fighting the shadow of the trouble, while the trouble itself grows and the community suffers. It is no more the duty of a fire insurance company to pay for fire extinction than for a life insurance company to pay for drainage systems and a marine company to pay for lighthouses."

* * *

SHOES AND LEATHER.

This winter the weather has been the main factor in the creation of several features in the boot, shoe and rubber trade. On the whole, its influence has not been a good one. For several weeks of the period during which we look for our coldest, most wintry weather it was more like spring. Rubbers, therefore, were at a discount, and overshoes scarcely looked at. The heavier forms of footwear also have been little favored. One can scarcely avoid the conclusion, therefore, that, in some lines, the stocks of held-overs must be quite large, particularly in the country districts, where considerable orders ahead are more the rule than in the cities, where close proximity to wholesalers causes retailers more and more to depend upon the former for the carrying of supplies. While, however, the sales of the heavier grades of boots and shoes and of rubbers have been restricted by the unseasonably warm weather, the call for the lighter grades has been larger than usual, so that, on the whole business has not been in such a poor way as some have thought.

Spring trade is now about over, though a few straggling sorting orders continue to be received. For the coming season the prospects are believed to be very good. The country is prosperous, and people these days demand a quality of shoe hardly dreamed of a few years ago. Not only that, but they want more of them. Prices will no doubt keep firm at the figures to which they were recently advanced. Hides and other materials, labor, etc., are all high, though it is true that there was, a week or two ago, a decline in hides of a very distinct character. This is hardly likely to influence the result, however, for, as a matter of fact, it was due almost wholly to deterioration in quality, which is always at its worst about now. Allowing for quality and waste, prices are now practically very little different from what they were two months ago. There is very little change in leather. Trade has not been distinguished for any large volume, but there is a good, steady undertone to the market, and active improvement may set in at any time.

As to payments, they have been fairly satisfactory, though some slowness is expected as a consequence of the weather conditions.

THE YORK LOAN COMPANY.

A stay of proceedings in this case before the Toronto magistrate has been brought about by counsel applying to a Superior Court to have the Crown Attorney submit more definite charges against Joseph Phillips than the indictment alleging conspiracy shows. It seems to us that what Mr. Phillips has not done as well as what he has done in connection with the conduct of this company may properly be considered at his trial. He is responsible for taking hundreds of thousands of dollars, much of it from ignorant people, some of it from grasping people, who wanted more interest than was usual or safe, and "investing" it in unprofitable hills and ravines, miniature parks and boulevards, suburban houses and shops, a piano factory, a life assurance company, apparently, too, a monthly magazine, the owners thinking all this while that their money was earning in the appetizing ratio shown by Mr. Phillips in his pink and white literature. He should have had the company properly officered, but this he did not do.

The revelations of the past few days respecting the manner in which money collected from the members of this concern was handled may fairly be called amazing. That a "lending" company, having auditors making sworn returns to Government, having directors and a solicitor, could allow its affairs to drift under the control of one man and be conducted as the evidence before court of two of its employees describes, passes ordinary belief. Miss Lillian Hudson, styled "manager of the audit department of the company," testified to signing deeds and mortgages at the request of the company, but refused to name any particular person from whom she took instructions. She received money for the "National Monthly," and put it in the bank; returns from the sale of pianos she handed to Mr. Burt; while agents were selling pianos on commission and getting premiums for the Toronto Life Company they were taking surrenders of shares under Classes B, C and D. She could not say who furnished the money for the printing office or the Lee grocery business—both of which Mr. Phillips appeared to conduct.

Another of the lady clerks to give evidence was Miss Gertrude Hall. Her evidence deserves to be transcribed in full, or nearly so. She had been with the company for ten years, having started as junior clerk and worked her way up to the position of mortgage clerk, having the handling of the real estate, insurance and taxes.

> She told Mr. Curry, according to the "Globe's" report, she could not say what property was disposed of to the City Realty Company. She, however, knew of one entry of the kind which went through the books. "It was for somewhere about $9,000, but it was paid back," she added. Miss Hall could not say when the company disposed of its realty and took mortgages in lieu thereof.
>
> "Did you become possessed of any of the company's realty?" enquired Mr. Curry.
>
> "In name only," replied the witness, with a smile. She had nothing to do with it, she said, with the exception of signing her name. *She never knew what she was signing for*, but she believed she gave mortgages to the company in this way. She understood this was a mere matter of form. She could not say who asked her to sign the documents, and did not look to see what she was signing. "I just did what I was told," remarked the witness.

It is of interest to remark upon the possibility that the York Loan Company's failure may not hit the victims in Nova Scotia so hard as elsewhere, if the legal opinion of W. B. A. Ritchie, K.C., is correct. He has informed the committee of Halifax shareholders that by virtue of an Act passed in the Nova Scotia Legislature in 1904, requiring the company to be licensed by the Provincial Secretary (which it had not done) the company was carrying on its business illegally after that date, and all who had paid money into it were entitled to rank, not as shareholders, but as creditors, and have, therefore, a first lien on the company's assets.

* * *

C. P. R. FINANCE AGAIN.

Two of the Toronto dailies, a morning and an evening paper, respectively, take the "Monetary Times" to task for things which they allege it said last week in connection with the Canadian Pacific Railway's method of financing its new stock issue, and they heap all sorts of accusations on this journal's head because it looked at the question from a standpoint other than the one they choose to take. We neither do nor did intend to discuss the contemplated issue from any viewpoint but that of its purely financial bearing. In this we did nothing but follow the lead of the London "Economist"; and, it will be remembered, that is the critic whose argument we were considering. The "Economist" was looking at the issue in regard to its bearings as a financial proposition, and so were we. Its attitude was not that of an observer of the freight rates obtaining on Canadian railroads, nor was it ours. The statements of our local contemporaries, therefore, as to our being the "enemy of commerce and industry," and the "eulogist of high finance," and so forth, are all beside the mark. The "Monetary Times" did not take up that side of the case, because, for one thing, that was not the side discussed by the "Economist," and because the "Economist's" article happened to be the text which we were dwelling on.

Neither of our critics, in their zeal for the welfare of the Canadian public and their indignation against any method which militates against low freight rates, makes any reference to the real point of our article. This point hinged upon a very important consideration, the *practicability* of any other method of financing the issue. Now, however plausible may be the theoretical argument in favor of saving $20,000,000 or so by issuing stock at to-day's prevailing market price, it is not of much use if conditions prevent its being put into practice. Whether this be so actually or not we do not attempt to say. The C.P.R. directors evidently thought it was better to be on the safe side; and past experience of other railroads certainly favored their view. And there is another thing which it would be well to bear in mind. Suppose for a moment that the C.P.R. had adopted the course which its critics recommend, and suppose that the proposition had failed, either signally or in part, would the position, not of the company but of the country as a whole, have been improved? The whole financial standing of Canada would perhaps have been weakened, and the future development of areas now but little known retarded to a very perceptible degree. As we suggested in our previous article, money and plenty of it is a factor of the highest importance to a company like the Canadian Pacific Railway and to a country at Canada's present stage of progress. Low freight charges are important, too, no doubt, but that is a phase entirely different from the one we essayed to discuss. From the way in which the road is to be paralleled in the immediate future we may fairly expect competition to have some effect in the interests of shippers and farmers.

* * *

OUR ENGLISH LETTER.

In the dry language of an official reply, the matter of payment of members of the House of Commons is "under the consideration of His Majesty's Government." Of course, nobody is flippant enough to whisper a suggestion of payment for peers. So long as they last, my Lords will transact business for nothing. But *à propos* the Commons, a return has been issued showing that Canada pays her M.P.'s appreciably more highly than any other colony. The remuneration of Federal members in Australia (£400 a year), is the nearest approach to the $2,500 per session of the Dominion House. Except for some special sorts of work, our Commons get nothing, and it is by no means certain that they soon will get anything. Extreme Radicals, Socialists, and labor men are, of course, enthusiastically in favor of salaries, and of payment of election expenses. They, in general, are the ones to whom such gains are of importance. A large half of the public sees little need for paying for services that men will render gladly for nothing. Expense is one objection, caste is another. We who are snobbish like to be represented by "gentlemen;" although not all of our unpaid deserve that title upon any counts. But beyond this, is the consciousness that professionalism has ruined most of the sports it has entered into, and—there is the fear that professionalism would be the worst enemy to our politics.

The Co-operative Wholesale Society of Manchester is said to have in project the establishment of its own grain-buying agency at Winnipeg. Let me add a few particulars about this leviathan concern whose half-yearly report is just out. Its sales during the latter half of last year were all but $55,000,000, and in the whole year it did $105,000,000; an increase of nearly $5,000,000 on 1904 trading. The C.W.S. is banker, shipowner, merchant, and manufacturer in more than thirty separate lines of trade. It buys direct from producers in all parts of the world, and supplies most of the 2,500 local or retail co-operative societies, which are making life so hard for innumerable small private traders. The Scottish Wholesale Co-operative Society of Glasgow, is to Scotland what the C.W.S. is to England, and it, also, is a colossus among provision buyers. In all, our co-operatives have sales exceeding five hundred million dollars a year, they have more than two million members, and they furnish a large proportion of the total purchases of probably one-seventh of the entire population of the British Islands.

This is rather a majestic business to have grown up from nothing at all, within half a century, and to have been founded moreover, by men whose inexperience of commercial ways was undiluted. Directors who sit for nine pence a meeting, who think themselves well fed on a six-penny tea, have been the controlling geniuses of the retail societies. In the day, they work at the loom or the forge, and at night they lay down points of policy for very extensive concerns which control maybe twenty, maybe sixty, branch stores. Bonus—the periodical dividend on purchases—is the cement which holds the business together, and these bonuses rule as high even as 20 per cent. The average distribution is lower, the newer race of managers believe in lower profits and lower dividends. Yet the effect is the same. Each year or half-year, the housewife is presented with a lump sum that she would scarcely otherwise have amassed, and to have her savings thus vicariously made for her, she submits cheerfully to the inattention and qualified civility that distinguish most co-operative shops. And woe—woe indeed—to the unfortunate directors and officials who have to appear on a platform and tell a houseful of termagant working women that the "divi" is two-pence down. The meeting dissolves in shrieks, groans, and commotion.

Mr. Geoffrey Drage, who is one of the ablest of our junior Conservative politicians, is on hand with plans for an Imperial Advisory Council. These plans are received well by all the bodies of business men, before whom they are placed, and, no doubt, they will command sympathetic attention at least in the colonies. To anyone who has considered the subject at all, it will be evident that much unification of commercial matters within the Empire is possible without a single fiscal change. A pet scheme of my own is for the preparation of all import and export returns for all British countries on one British model, designed to give the maximum of detail and enlightenment to those who study trade movements intelligently. But Mr. Drage goes further, he proposes uniformity in patent and trade-mark law, insolvency, partnership, and such commercial matters. To this is joined cheaper postage and telegraphic service, and less definite suggestions for the co-ordination of military and naval defence. That programme seems to shadow forth something practical to start with, and while it will not fire the zeal of our coldest-blooded doctrinaires, it should afford common ground on which Chamberlainites, as well as Free Traders can do something palpable to show that Greatest Britain is all one. The example of the coherent United States should induce Canadians to think favorably of even small beginnings, in welding together the best countries of the earth.

Mentioning patent law reform leads naturally to the observation that our position is a little anomalous. We allow all-comers to take out patents here, imposing no restrictions upon them in the event of their not choosing to carry on manufacture in this kingdom. Thereby our manufacturers are muzzled so that the foreign patentee may operate here with impunity. With especial effect has this untrammelled grant of monopolies told on our chemical and dyestuff trades. Fifty years ago to the month, Dr. Perkin, a young English chemist, discovered the latent beauty of coal-tar colors. The invention was English, its exploitation has been German. More than patent regulations enter into the case, but the fact remains that $30,000,000 worth of coal-tar color is coming annually into this country from abroad, whereas the alteration of a few lines in a statute would transfer almost the whole of this production to their shores. The case is similar with telephones, with typewriters, and other sundries, and one of these days John Bull will seriously reconsider the easy indulgence that has been sending the work of high manufacture needlessly abroad.

For the interest of those who sell pills, as much as those who buy them, I give some particulars, which I have every reason to believe true, concerning the manufacture of one of the most-advertised British brands. Cost of material and all establishment charges 10 per cent., cost of advertising 70 per cent., leaving profit, 20 per cent. The pills are chiefly soap, with some aloes and ginger, and a chemist estimates their fair market value at two-pence per gross. The pills, therefore, which cost 21 cents net, are worth—excepting wrappers and frivolities—one-third of a cent or thereabouts. Can it be wondered that druggists are preferring to sell goods which can be bought at something nearer to their intrinsic worth than the articles which are foisted on dyspeptics by the most specious sort of advertising?

Our fire offices committee, or combine, has been strengthened by the support of the Central Insurance Co.; an office with large interests in the Birmingham area, which was founded some years ago with the support of the Chamberlain family to oppose the ring.

NORTH COUNTRY.

Manchester, March 3rd.

* * *

MATTERS IN AUSTRALIA.

We had room last week for only a portion of our Sydney correspondent's letter of 5th February. But it contained the interesting announcement of a concession to Canada in the shape of a change in the Australian customs charges on goods from Canada. We now give some further portions of the letter.

The Premier of New South Wales, in a recent speech claimed that the total production of farming, pastoral products, and minerals of this State last year amount to forty-five million pounds sterling, by a population of about a million and a half, and that this exceeds the production per caput of any country in the world. It is probable that his estimate, for it is as yet only an estimate, is a little too high. Nevertheless, the production is enormous, and probably will be a record for the proportionate number of people.

Mr. Seddon, the Premier of New Zealand, is noted for his ingenious schemes prior to an election. In the election recently held he had troubles with the farmers who had leased lands from the Government, and were demanding that the land should be sold to them; and the usual industrial troubles between working men and their employers which threatened him seriously. He gravely proposed the holding of a general unofficial parliament in which the farmers, employers, and working men were to be represented, to arrive at a conclusion that would settle these difficulties. It took on; but now that the elections are over, it is announced that no such parliament will be held. The Premier found that upon examination of the details of his scheme it was unworkable. The farmers refused to send delegates, some of the labor unions opposed it, then the manufacturers in a body decided to have nothing to do with it, and sensible men could not see why there should be a second parliament to do the work for which the regular parliament had been elected. It served, however, its political turn.

Mr. Lockyer, the collector of customs at Sydney, has induced his large staff of junior officials to go in for a course of reading and study that will qualify them to be intelligent officials in any department of the customs work. In connection with it he has monthly meetings at which addresses are delivered upon subjects cognate with their work. This includes geography with the industries, and productions of the various nations and their trade. This cannot but assist in getting officials out of the mechanical rut into which they are liable to fall, make them broader in their views and able to think, and might well be followed in other departments of the Government, and perhaps outside of Australia.

While there is the utmost good-will on the part of the Government and the people towards Canada, there is, nevertheless, a little jealousy at the success of Canada in securing immigrants from the Mother Country, and they welcome any little instance that tells in favor of Australia as a home for the settler. One day last week one of the morning papers contained a paragraph stating that at an interview a Canadian settler who was on his way to England had given his opinion that Australia was the better country on account of the terrible severity of the Canadian winters. It published, however, the fact that he had gone to Canada with £100, and in fifteen years was leaving it with £10,000. The next day it was fair enough to publish a letter from a settler's wife in which she gives her Australian experience, and it may convince Canadians that there are other things besides winters to distress people.

New Zealand does not yet understand the position of the line said to be subsidized between Vancouver and New Zealand. It appears the New Zealand Government, out of consideration for Canada, has agreed to an experimental subsidy for twelve months, indicating the belief that the line cannot succeed. The Mr. Alley who is reported to be the promoter of this scheme is evidently the man who promoted a scheme some three years ago, going from Seattle to New Zealand, in which was included the construction of an enormous woolen factory at Seattle. On arriving in New Zealand he received scant favor from the merchants and boards of trade, and then changed it to be a great British line from Vancouver. However, the scheme was still considered to be impracticable, and he went back. When he reached San Francisco, he again changed his mind, and announced it was to be a great route from San Francisco to New Zealand and Australia. Apparently he has abandoned his route also, and has gone back to the Canadian. If he does not include in the Canadian route the huge Seattle factory Canada has not been fairly treated.

The Commonwealth Customs Department has issued a preliminary statement of the trade of Australia for 1905. The following figures giving the imports and exports for five years will be of interest:

Imports:—

	Gold and Coin.	Merchandise.	Together.
1901	£934,797	£43,620,714	£44,555,511
1902	987,380	41,235,494	42,222,874
1903	1,259,878	37,575,804	38,835,682
1904	1,203,692	35,817,150	37,020,842
1905	1,555,455	36,847,335	38,402,790

Exports.

	Gold and Coin.	Merchandise.	Together.
1901	£14,338,434	£35,357,738	£49,696,172
1902	14,326,531	29,588,556	43,915,087
1903	18,408,702	29,761,462	48,170,164
1904	16,914,691	40,574,525	57,489,216
1905	10,994,724	45,755,620	56,750,344

It will be noted that the export of merchandise in 1905 was over five million pounds sterling greater than that of 1904, though the total export was three-quarters of a million less, due to the decrease in the export of gold of about six million pounds sterling. The output in gold in 1905 was not materially less than in 1904, but the difference was retained in the country, not being needed to pay indebtedness abroad. The excess of exports was not quite as great in 1905 as in 1904, due to this decrease in the export of gold, but it could have been larger than even the remarkable figures of a year ago. The following is the excess of exports of Australia since the establishment of the Commonwealth:—

Year.	Excess of Exports.
1901	£5,140,661
1902	1,692,213
1903	9,334,482
1904	20,468,377
1905	18,347,554

They show what an extraordinary country Australia yet is under fair seasons and good management.

F. W.

Sydney, N.S.W., 5th February, 1906.

* * *

COBALT AND THEREABOUT.

The present activity in and around Cobalt is surprising even to the best-posted people in the camp. It was conceded a long time ago that the mineral deposits at Cobalt were extremely rich, but it remained for the advent of the diamond drill in the camp to prove the existence of the ores to a depth of over 300 feet and to start a mining movement that bids fair to develop all of Ontario.

It is a fact, as recent visitors to that place have told us, that prospectors from all parts of the world are pouring into Cobalt on every train. This can have but one result, viz., not only Coleman township, which contains so far practically all the valuable mineral that has been discovered in the vicinity, but all the territory close around as well will be thoroughly prospected and probably developed. Once in the district these hardy prospectors will not stop with the immediate vicinity, but will explore all of the country for miles in every direction. Naturally a large number of them will follow the course of the Temiskaming and Northern Railroad now building and will scatter in all directions, and there is no doubt but what they will make finds wherever there is mineral.

Aside from the richness of the Cobalt camp itself, the value of this feature can hardly be over-estimated, as it means great things for the general mineral development of the Province of Ontario. No one wants to see an inflated mining boom in Cobalt or in the Province, but with the present mining laws and reasonable diligence on the part of the Government this feature may easily be avoided, and great good can result from the working out of the present interest along sensible and conservative lines. There is no doubt that there are opportunities to make money in the Cobalt district, but mining propositions there and the standing of the firms promoting them cannot be investigated too thoroughly. One of the drawbacks to the Cobalt camp is the trouble with titles to land, and until a Crown patent has been granted it can hardly be assumed that the title on any property is safe.

A LIVELY NOVA SCOTIA TOWN.

Our readers have often heard of Amherst, Nova Scotia, situated in the very heart of the Maritime Provinces, on the isthmus which divides the Northumberland Strait from the Bay of Fundy. Its leading industries are already known over Canada, such as woolens, boots and shoes, car building, engine building, and now we hear of the incorporation of the fur dealing and manufacturing firm of Dunlap, Cooke & Co. into a limited company, with a capital of $250,000. This adds another to the long list of successful industries started in Amherst. The new company has, we are told, a flourishing branch in Boston, as well as in several Canadian cities. None of the stock is offered for sale at present. Amherst is not a large place—only some 7,000 people in it, but they are mostly the right kind of people. The names of concerns like the Rhodes, Curry Company, the Robb Engineering Company, the Amherst Boot and Shoe Company, the Hewson Woolen Mills, and other industrial concerns, all extremely successful, have made it a synonym in the Maritime Provinces for push and enterprise. All the concerns are doing business all over America.

* * *

OUR HALIFAX LETTER.

Representative postmasters from all over Nova Scotia met here recently and organized The Nova Scotia Postmasters' Association, the object being to bring about such changes as will enable the average postmaster to work under better conditions and render more efficient and satisfactory service. This movement began in Manitoba three years ago, and similar associations exist in Manitoba, Ontario, Quebec and New Brunswick.

A resolution was recently passed in the City Council to make a change in the system of assessment in banks. It is proposed to substitute a new law somewhat similar to that recently agreed on between the banks and the city of St. John, N.B., whereby the banks pay a percentage on the amount of business transacted. Recent changes and absorptions of banks here have involved large losses to the revenue of the city. When the present assessment law was made nearly all the banks in the city had their head offices here, but since the recent changes the majority of these now pay taxes only as branches. Of the many banks started in this Province the only one remaining a Provincial institution is the Union Bank of Halifax.

Municipal ownership is strongly before the public in Halifax at present. The franchise under which the city's gas lighting is supplied expires this year and the service furnished by the Halifax Electric Tramway Company has been so unsatisfactory that there is a persistent demand, strongly supported by the most influential section of the press, for a new arrangement. Some time ago a special committee was appointed by the City Council to look into the matter; to compare our rates and service with those elsewhere, and report on the advisability of the city installing a plant to do its own lighting and generating of heat and power. They have instructed the city electrician to prepare estimates of the cost of supplying light for the streets and other civic purposes. They also recommend that a bill be submitted to the Legislature asking permission for the city to do commercial lighting power and heating. In the event of this being refused measures will be taken to purchase (by arbitration) the franchise now held by the Tram Company for lighting, power, and heating in the city.

A somewhat peculiar case came up before Judge Meagher last week in which the municipality is concerned. At the time of the meeting in Winnipeg last summer of the Union of Canadian Municipalities, the mayor and city engineer attended and their expenses were paid out of the city funds, naturally. Mr. R. I. Hart, who is in some respects a somewhat remarkable though perfectly reputable citizen, with a great propensity for setting things right, brought suit for the amount expended, $345.40, "no authority being expressed or implied in the city charter authorizing the payment, etc." Judgment has been reserved by Justice Meagher; but opinions have been expressed pretty freely by citizens who dislike to see the name of the city brought into a suit of this kind.

The bait-freezer at Lunenburg, formerly mentioned, is now in operation, and the Atlantic Fish Company already have orders for half a million pounds from the Lunenburg fishing fleet. The freezer has a capacity of 250,000 pounds. At the company's branch in La Have is another freezer of 90,000 pounds capacity. This will be of immense advantage to the Lunenburg fleet. The long delays of the past will be avoided. The company have driers capable of spreading 250 quintals of fish, and will purchase green fish from the fishermen for cash at a good price. The schooners are getting ready for the spring trip to the Newfoundland banks, indeed, some of them have already cleared.

The last of the Imperial troops departed from the Citadel last week, being a body of 150 engineers, who had been here since the general migration some months ago. The Canadian troops are getting well into harness now and everything is going on as though Canada had always been "running her own show."

Messrs. J. C. Mackintosh & Company, the local bond dealers and bankers, have opened a branch in St. John.

Premier Murray has announced that the local Government will make known their policy with regard to prohibition and temperance legislation during the coming session.

Halifax, N.S., 12th March, 1906.

* * *

MONTREAL AS A MANUFACTURING CENTRE.

In no better way can the expansion of Montreal and its probably still quicker expansion in the future be realized than by a survey of the intentions of its great transportation and power and lighting corporations. A short while ago the Street Railway Company of that city announced big things in the way of extensions and improvements. Now the Montreal Light, Heat and Power Company stated that it will, during the next three years, expend something like $5,000,000 in similar work. Among the improvements contemplated will be the construction of a new power house at Montreal to develop their water power situated on the Soulanges Canal, near the Cedar Rapids. The new power plant will generate power for transmission to Montreal, and the entire output will be absorbed by the Light, Heat and Power Company. The capacity of this development will be 12,000 K. W., normal rating, and all apparatus will have a large margin of overload capacity. It is expected that this power will be ready for delivery in this city by October next, and its addition to the Light, Heat and Power Company's source of power supply will make the company's system the most reliable on this continent.

The general plans for the reorganization of the Light, Heat and Power Company's system, which are being carried out, contemplate interconnecting all steam and water power plants by means of underground cables at 12,000 volts pressure, so that the failure of the power supply from any one of the six sources would not cause an interruption to the company's service.

An extensive and powerful plant is intended to be constructed at Buisson Point, as it is the intention of the company to develop at this point to the fullest extent. The cost of these two plants is estimated at $4,000,000.

* * *

DOMINION COAL COMPANY.

At the annual meeting of the Dominion Coal Company held in Montreal the other day, some further particulars were given as to the company's position and prospects in addition to those published in the annual report, which was referred to two weeks ago. Mr. F. L. Wanklyn, who presided, made the statement that the directors had hopes of being in a position to pay a dividend on common stock at the end of the next twelve months. Reference was made to the ninety-nine years' contract with the Iron Steel Company and further explanation offered that it was subject every five years to a revision based on the price of contract coal. The following board of directors was elected:—President, Mr. James Ross; vice-president, Mr. F. L. Wanklyn; Lord Strathcona, Sir William Van Horne, Senator Cox, Senator MacKeen, R. B. Angus, W. D. Matthews, H. F. Dimock, J. R. Wilson, W. B. Ross and F. S. Pearson.

* * *

GREAT WEST PERMANENT LOAN AND SAVINGS COMPANY.

It is something for a company to have its headquarters in the heart of our prairie country; it is something for a company or a firm to appeal directly to the people of Manitoba and beyond as a local concern. These considerations are sure to enlist for that firm or company the support of the Western man; at least, other things being equal, the location of it gives it a preference in the minds of its neighbors. All this is brought to mind when we read the report and statement of the Great West Permanent Loan and Savings Company. This company has already built up quite a remarkable business. At the close of its third year it has more than half a million assets, almost all in the shape of first mortgages in small amounts on city and town property. It gets good rates and is conducted with energy and ability. A noteworthy feature is the fact that though only founded in 1902 it has been able to put aside a reserve fund of $100,000, with something less than $400,000 capital paid up.

It is pleasing to read the various addresses made at the meeting by the president, Mr. Alexander, and others connected with the company. They are proud, as they have a right to be, of the briskness and success of the Great West Permanent up to date, and they do well to rejoice at the fact that the company has practically no interest arrears, and not a dollar of real estate on its hands, while the class of its loans appears to be one to be proud of. Both Mr. Bawlf and Mr. Hutchings of the advisory board commented in a strain of delighted satisfaction on the showing made, and certainly if the company maintains the policy of loans it has thus far proceeded upon it must do well.

* * *

MUTUAL INSURANCE COMPANIES IN QUEBEC.

According to a statement made public last week, the mutual fire insurance companies operating in Quebec under authority from the Province have increased their business very decidedly during the last few years. There are thirteen of them, and the aggregate of their business in the fiscal year 1905 was sixty-two and a half millions of insurance under 76,333 policies. This was an increase of $18,325,000 or about 30 per cent. since the figures of 1901, which were $44,219,000 insurance under 53,906 policies. There are only two life companies of provincial origin and jurisdiction, and these report for the year ended 31st August last, $8,782,131 insurance written; income $109,677; expenditure, $96,758. Statistical particulars are given by the department, as under, about the thirteen mutual fire companies. The losses appear to have been small. Reporting for the year ending August 31st last:—

Assets	$ 1,911,752
Liabilities	70,885
Income	619,887
Expenditure	517 024
Policies in force, 76,333 for	62,544,198
Policies issued during year, 36,102, for	27,389,701
Deposit notes received	609,405
Losses paid	286,697

* * *

FIRE INSURANCE ITEMS.

At a meeting of the Board of Fire Wardens in Halifax a week ago, the chairman read a letter from a citizen stating that if the Board of Trade, fire underwriters and the City Council would ensure investigation into all fires of a suspicious nature, the insurance rates would drop five points. A recommendation to that effect is to be made to the council.

Such is the growth of commerce in Western Canada that the branch office established in Winnipeg some time ago by the Royal Insurance Company to look after business in Manitoba and the Territories, has been unable to keep pace with the increase of business, and now a branch for Alberta has been established in Calgary, which will divide business in the new territory with Winnipeg. Further changes have been necessitated, announcement of which was made last Friday by Mr. Wm. Mackay, manager in Montreal. Mr. Arthur Huddell and Mr. Fred. W. Walker will open the new branch in Calgary as joint managers. Mr. Arthur Baby, inspector for the Province of Quebec, will go to Winnipeg as assistant manager. Mr. John Pickering is to be inspector for Western Ontario, with headquarters in Toronto. Mr. John Kay, inspector for Western Toronto, becomes assistant manager to Mr. Percy J. Quinn, at the Toronto branch. Mr. Blair Russell is appointed inspector of Eastern Ontario, with headquarters in Montreal, and Mr. M. A. Gauthier inspector for the Province of Quebec, with headquarters in Montreal.

* * *

LIFE INSURANCE NOTES.

Among the up-to-date T. I. P. pointers we find the following:—

Lent! Past participle of loan—which suggests that your wife may have to negotiate one of those unpleasant things from a friend should you die uninsured.

When you die there may not be even a family jar left in the cupboard. Get a policy. It will preserve the home and keep your widow from getting into a pickle of worry.

"If the Legislatures of the several States will pass laws forfeiting premiums and making void every policy of life insurance upon which a rebate is allowed, it will cure the evil," says L. G. Fouse, president of the Fidelity Mutual Life. "Notice of such a law should be given in red ink on the margin of every policy, made obligatory upon the company by law, so that the holder will know that unless he has actually paid the money represented by the receipt he has no insurance. This will stop it, and will have the effect of reducing first-year expenses about one-third, which will benefit the insurance companies."

We hear with regret of the sudden death last week of Mr. Robert J. Brannen, of Denver, Col. He was seized with apoplexy last Tuesday, and being weakened by incessant labor, was unable to recover. Mr. Brannen was instrumental in organizing the National Association of Fire Insurance Agents of the United States some ten years ago, and was its first secretary. He was engaged in a similar movement to organize the casualty and surety agents of the country at the time of his death. His circular respecting a proposed meeting of this kind reached us ten days ago.

A despatch of Friday last from Syracuse, N.Y., says that the Grand Lodge of the A.O.U.W. by an almost unanimous vote decided to adopt increased rates varying from 10 per cent. on younger members to more than 100 per cent. on older members. It is expected that from 10 to 15 per cent. of the members will drop out. Grand Receiver Blehdon has about $162,000, including $50,000 coming from the Supreme Lodge, which will be used to pay claims more than five months old. The new rates will go into effect immediately, and it is expected that about a year will be required to wipe out the total deficiency. It is added that the above has no bearing on the A.O.U.W. in Ontario.

* * *

BANKING AND FINANCIAL.

The Standard Bank has opened a sub-agency to Colborne, Ont., at the village of Castleton.

The Imperial Bank intends shortly to open a branch at the city of Quebec.

A branch of the Bank of Ottawa has been opened at Perth, Ont., and one will be opened at Haileybury, Ont., on Lake Temiscaming, in about ten days.

Branches have been opened by the Merchants Bank at Russell, Manitoba, and at Daysland, Alberta. We are told that this brings up the number of this bank's branches to 114.

We hear that the Farmers Bank of Canada has appointed Mr. W. R. Travers, formerly manager of the Merchants Bank at different Ontario points, as their general manager. The bank expects to be able to open for business in two or three months.

At a meeting of directors of the Eastern Townships Bank, held on 8th instant in Sherbrooke, Mr. S. H. C. Miner, of Montreal, was elected vice-president of that bank, which office was left vacant by the death of the late Major Wood. No new director has yet been named, we are told, to succeed Major Wood.

A Liverpool stockbroker, who, being rich, employs a man-servant, said to his valet one morning: "Hoskin!" "Sir," said the man. "You are getting careless, Hoskin." "Oh, sir, I hope not, sir." "You don't brush my clothes regularly." "Oh, sir, I assure you——" "There, Hoskin, that will do. I left half a sovereign in my waistcoat pocket yesterday morning, and—it is still there."

The final results of their mad folly must now be unfolding themselves to the perception of the Banwells, man and wife, who decamped from Toronto some three months ago with forty thousand dollars of the Crown Bank's money. On Monday they again made their appearance at the Police Court. Evidence as to the purchase of quantities of jewellery was presented and they were committed for trial, the lady again being allowed out on bail. Her purchases of jewellery, as detailed by the merchants who sold it, make spicy reading.

A meeting of subscribers to the capital stock of the Sterling Bank of Canada was held in Toronto a week ago, when the following directors were elected:—W. J. Gage, president W. J. Gage & Co., Toronto; G. T. Somers, wholesale grain, Toronto; Charles W. Spencer, general manager Mackenzie & Mann railways, Montreal; John H. Tilden, president Gurney-Tilden Company, Hamilton and Winnipeg; Wm. Dineen, hatter and furrier, Toronto; Hon. S. C. Wood, ex-Treasurer of Ontario; Hon. W. J. Hanna, K.C., M.P.P., Provincial Secretary; H. Wilberforce Aikens, Treasurer of Medical Council for Ontario, Toronto; Sidney Jones, president Jones Bros. & Co., Toronto; Ambrose Kent, jeweller, Toronto. Stock to the extent of $791,000 has been sold with a list of 1,100 shareholders. A resolution was passed at the meeting of shareholders to increase the capital stock at an early date from one million to two.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ending with Thursday, March 15th, 1906, as compared with those of the previous week:—

	March 15.	March 8.
Montreal	$25,658,894	$29,380,607
Toronto	22,205,105	22,373 325
Winnipeg	6,385,663	7,365,433
Halifax	1,372,160	1,602,853
Hamilton	1,298,546	1,469,993
St. John	976,988	997,039
Vancouver	1,944,938	2,027,236
Victoria	980,059	826,380
Quebec	1,486,347	2,070,541
Ottawa	2,347,563	2,658,128
London	931,065	1,269,441
Total	$65,587,328	$72,040,976

Vault doors in Bank of Montreal and Royal Trust Company, Montreal Three times larger and heavier than any other in Canada. Doors and Vestibules weigh **60 tons.** Total weight of lining and doors **260 tons.** Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

J. & J. TAYLOR, Toronto Safe Works, Toronto.

Established 1855.

DUMMY DIRECTORS.

After the unfortunate experiences with large corporations across the line, it would appear that one man-power management had better end, as well as so-called dummy directors, and give place to open and above board management; also to the frequent publication of statements by expert book-keepers as a result of a thorough examination. Henry Clews once knew a man of very great business renown who during the last thirty years of his life was much sought after because he possessed the qualifications necessary to make him a most satisfactory director, hence he was connected with a very large number of companies. He was a man of wealth; retired from business, and possessed a corporeal capacity, but it was of the avoirdupois kind. His mental qualifications consisted in his always attending punctually all the meetings. He came early and stayed to the end; watched closely to determine which way the majority vote was going, and always went with it. He was never known to open his mouth except when the luncheon was served after the directors' meeting had adjourned. He was much lamented by corporation managers when he died. He was their favorite director, on the ground, as claimed, that he gave no trouble, and was perfectly satisfied with the result of every meeting when he was handed his $5 gold piece for attendance, which caused him to go home rejoicing.

A MEMORABLE GATHERING IN BRANTFORD.

The Board of Trade banquet in Brantford last Friday night possessed some features which made it memorable. Chief among these was the presence of Dr. Alex. Graham Bell, the inventor of the telephone, who was in years gone by a resident of the "Telephone City," as Brantford is called, and with reason. Among the other guests were Messrs. J. S. Willison, of the Toronto "News"; W. K. McNaught, M.P.P.; G. P. Scholfield, of the Standard Bank, Toronto; W. F. Cockshutt, of Brantford; O. P. Letchworth, of Buffalo; Mr. Fryer, president Galt Board of Trade; Mr. Nesbitt, of Woodstock; and Mayor Waterous. Dr. Bell gave a most interesting history of the invention of the telephone, the first trial and demonstration of which took place in his father's house on Tutela Heights in 1874, so that the inception of that wonderful instrument was certainly in Brantford. The age for the flying machine has now arrived, said Dr. Bell, who is at present experimenting with that twentieth century mode of motion.

Mayor Waterous made some good points in replying to the toast, "The City of Brantford," proposed by Mr. John F. Ellis, of Toronto. He spoke of Brantford as a place of first things, and mentioned them thus: "The telephone was first perfected here; the late Dr. Henwood performed a first operation in Canada here; the first cast iron plough made in Canada was made here; the first self-reaping binder in Canada was made here; the first circular saw in Canada was built here; the first sleeping car in Canada was constructed here. Brantford," he added proudly, "has no poor among her population." The president of this delightful gathering was Mr. Muir, president of the Board of Trade. A Telephone Memorial Association has been formed in Brantford, whose object it is to mark in some way the invention of the telephone by Dr. Bell and the connection of Brantford with it. It is proposed to raise $40,000 or more, and to buy the Bell homestead and maintain it as a monument.

* * *

TILLSONBURG BOARD OF TRADE.

The annual meeting of the Tillsonburg Board of Trade was held in that town on Friday evening, the 9th inst., in the council chamber, and was largely attended by the representative business men of the town.

Owing to the unique position which Tillsonburg already occupies as a railway centre, the early possibility of an electric road entering the town, and the growth of the interurban telephone lines, the new board will have several important matters to deal with. The interest manifested at the meeting indicates that Tillsonburg is determined to maintain her position as one of the most progressive towns in Western Ontario.

The election of officers resulted as follows:—President, Frederick Biette, manager of the Western Bank; vice-president, E. V. Tillson, managing-director of the Tillson Company, Ltd.; secretary-treasurer, W. D. Robertson. These gentlemen will be assisted by an executive board composed of twelve business men of the town.

* * *

MANCHESTER SHIP CANAL.

Canadian trade figures largely in the business of the Manchester Ship Canal. In fact, a recent statement places Montreal, Quebec, Halifax, and St. John first in importance of the ports connected with Manchester by direct steamship services. A brief summary of the report, therefore, of the forty-first half-yearly meeting of shareholders in that great enterprise, held on the 15th February last, cannot fail to interest many readers in this country. Mr. John K. Bythell, chairman of the board of directors, presided and delivered a very clear and concise address elucidating the main points of the year's operations.

The outstanding fact seems to be that there has been a considerable increase of traffic and revenue both in the Ship Canal and Bridgewater department. The sea-borne merchandise which paid toll for the use of the canal showed an increase of 259,000 tons as compared with the corresponding half of the previous year, while receipts amounted to £240,691, against £219,495, an increase of £21,196. Of this amount, £4,357 was absorbed by additional expenditure; part in connection with the opening of the new dock by the King and Queen.

The net result of the working of the Ship Canal for the half-year was a profit of £114,394, against £97,555 for the previous period, an increase of £16,839. The Bridgewater Department showed a profit of £18,226, against £14,709, or an increase of £3,517, making a total working profit for the whole undertaking of £132,620.

A summary of the whole year shows that the sea-borne merchandise having paid toll for the use of the canal amounted to 3,993,000 tons, against 3,618,000 tons, an increase of 375,000 tons. The Ship Canal receipts amounted to £449,436, against £418,043, an increase of £31,393 over the previous year. The Bridgewater Department yielded a working profit of £32,926, against £26,397, an increase of £6,529. The increase therefore of working profit for the whole undertaking being £31,471. A very satisfactory feature of the efforts of the management is that the ratio of expenditure to income continues to decline. In the year 1900, the expenses of operating the Ship Canal absorbed 71 per cent. of the receipts; by 1905, the proportion had been reduced to 55 per cent. This showing would doubtless have been still better, had it not been for dredging work, and some expensive litigation. A review of the most prominent conditions in sight would appear to indicate that while no enormous development of the canal's business is likely in the near future, yet it bids fair to increase in a reasonably satisfactory manner.

* * *

TOBACCO IN ESSEX AND KENT.

A shipment of tobacco leaf, grown in Essex county, was made from St. Thomas on a recent day, the dimensions of which show to what importance the growing of tobacco has attained in the Ontario counties of Essex and Kent. A special train of thirty-five cars, all laden with the fragrant leaf, was made up in St. Thomas, Ont., for shipment to Granby, Que. The weight of the tobacco contained in these cars reached 1,211,351 pounds, about 31,000 bales, all Canadian leaf, from the counties named above. The Leamington "Post," from which we obtain this item, realizing the steady growth of tobacco interests, has opened a "Tobacco Department" in its columns and will devote a column weekly to the subject. It says that about 90 per cent. of the crop of Essex tobacco has been received and paid for. And its market report of the 9th instant says that on account of heavy roads and inclement weather receipts for the week have been light. Prices remain firm with good demand for first-class stock.

* * *

—Two heavily capitalized companies have been formed recently for the purpose of developing the mineral resources of the Telqua River district in Northern British Columbia. In this region, there are said to exist "high-grade copper ledges of enormous size, valuable silver-lead propositions and inexhaustible coal seams, both bituminous and of a semi-anthracite character." It is situated within fifteen miles of the preliminary route surveyed by the engineers of the Grand Trunk Pacific. It is reached by steamer to Port Essington, steamboat to Hazelton on the Skeena River and thence by trail, a distance of ninety miles, sixty of which are through the rich Bulkley Valley. One of the companies is the Telqua Mining, Development and Smelter Company, capital $5,000,000, in which Augustus Heinze, the Butte (Mont.) copper magnate, is said to be heavily interested. It owns four sections of land at Telqua Lake and has already selected a town site. Another group of claims has been located by Col. Topping, who had much to do with the founding of Rossland, and taken over by a concern called the Tel-Kwa Mines, Limited, capital $200,000, of which H. E. Macdonell, of Nelson is president. This whole countryside is said to be rich agriculturally as well as in the mineral sense.

Meetings

GREAT WEST PERMANENT LOAN AND SAVINGS COMPANY.

Report of Third Annual Meeting.

The third annual meeting of the shareholders was held at the head office of the company, Bank of British North America Building, 436 Main St., Winnipeg, Man., on Wednesday, the seventh day of March, 1906, at 4 p.m.

Among those present were: N. Bawlf, Esq., president Northern Elevator Co., director Bank of Toronto, etc.; E. F. Hutchings, Esq., president the Great West Saddlery Co.; Major Stewart Mulvey, secretary-treasurer Winnipeg School Board; E. D. Martin, Esq., president Martin, Bole & Wynne Drug Co.; J. Stuart, Esq., president Stuart Electric Co.; W. T. Alexander, Esq., president the Great West Permanent Loan and Savings Co.; E. S. Popham, Esq., M.D., vice-president the Great West Permanent Loan and Savings Co., director the Standard Trusts Co.; J. Obed Smith, Esq., immigration commissioner; Robert Magness, Esq., Inspector of Weights and Measures; R. G. Affleck, Esq., barrister-at-law; Fred Steele, Esq., managing director Steele Bros. Investment, Ltd.; F. H. Alexander, Esq., secretary the Great West Permanent Loan and Savings Co.; E. L. Taylor, Esq., barrister-at-law; J. E. Mailhot, Esq., Selkirk, Man.; O. Nelson, Esq.; Wm. Fulkerson, Esq.; Wm. McLeish, Esq., L. B. Willan, Esq.; R. Cunningham, Esq.; J. B. Johnson, Esq., and others.

The president, Mr. W. T. Alexander, having taken the chair, the secretary, Mr. F. H. Alexander, was appointed secretary of the meeting. At the request of the chairman the secretary read the notice convening the meeting, also the minutes of the last annual general meeting, which were duly confirmed.

The secretary then read the report of the directors and the general statement for 1905, which are as follows:

Report.

Your directors have much pleasure in presenting the third annual report of the Great West Permanent Loan & Savings Company, accompanied by the profit and loss account and other financial statements for the year ending December 31st, 1905, as duly certified by the auditors of the company.

The year just ended has been the most successful in the history of the company. In fact the assets are now nearly double what they were at the close of our second year. This, in itself, should be very gratifying to the shareholders.

The total subscribed capital at the present time is $1,250,000. The assets now reach the handsome amount of $525,786.10. This is, indeed, a very creditable showing; in fact, the company has established a record for Canadian loan companies of a similar nature.

The fact that the head office and directors are located in the West, has been of inestimable value in securing for our company the hearty support of the Western people. The company has been instrumental in bringing outside capital into the West, where it has been invested in gilt-edge securities, thereby benefiting the shareholders of the company and at the same time proving a source of great convenience and satisfaction to the borrowing public of the West, inasmuch as they are not subjected to any vexatious delays, but are enabled to have their loans negotiated on the shortest possible notice.

The company established during the past year branch offices in Halifax and Victoria, where a handsome amount of the company's capital stock was placed. The judicious placing of our capital stock in the different provinces of Canada will ensure for our company a permanent business connection which will prove of great assistance to the company in its future operations.

Owing to the wonderful development throughout the entire West, there has been an extraordinary demand for money. This has enabled the company to keep its funds actively employed in the best class of productive property and at a very remunerative rate of interest.

The small amount of arrears on real estate loans due at the close of last year is a splendid evidence of the prompt payment of principal and interest.

The total amount of first mortgage now exceeds one-half million dollars. These mortgages are invariably on improved city and town property, in small average amounts, with a good margin of value, and calling for the interest and a portion of the principal each year until the loan is repaid. As a result, the borrower's debt grows less and the company's security greater. Every loan is covered by ample insurance to guard the company against possible loss by fire.

As the company loans no money for speculative purposes, but has all its funds employed as above outlined, it will readily be seen that its securities are the best that can be obtained. By referring to the profit and loss statement you will notice that the net earnings from first mortgages on improved real estate amounted to $31,629.48, which has enabled the company to declare two half-yearly dividends on the fully-paid permanent stock at the rate of eight per cent. per annum, also pay the five per cent. accrued interest on the accumulative permanent stock, that has been paid in full during the year, and credit the balance of the "B" permanent stock with five per cent. interest and the withdrawable stocks, "C" and "D" with the interest guaranteed on the said stocks. There still remained to the credit of profit and loss account the handsome sum of $11,517.71, which, together with the amount to the credit of the premium account, was transferred to the reserve fund.

Your directors desire to congratulate the shareholders and all interested in the welfare of the company, that the reserve fund has attained the magnificent proportions of $100,680.93, after a period of but three years, and thank the shareholders for their hearty co-operation in the past, and feel confident that they will in the future do all in their power to advance the interests of the company.

The directors have again pleasure in recording their appreciation of the efficiency and zeal with which the officers of the company have performed their respective duties.

W. T. ALEXANDER,
President.

Winnipeg, February 20th, 1906.

AUDITORS' STATEMENT.

We, the undersigned, beg to report that we have made a full examination of the books, accounts and vouchers of the Great West Permanent Loan & Savings Company to the 31st of December, 1905, and find the same to be correct and properly set forth in the above statement.

A detailed audit of the cash receipts and disbursements with vouchers, has been mailed and found correct. The securities for loans, as above shown, in the hands of the company, have been carefully scrutinized and compared with the detailed list of mortgages and found correct.

(Signed)
D. A. PENDER, C. A.,
W. SIDNEY RONALD, C. A.,
Auditors.

Winnipeg, February 17th, 1906.

Adoption of the Report.

Mr. W. T. Alexander, the president, in moving the adoption of the report, said:—

It affords me much pleasure to move the adoption of the report.

The statements which have been laid before you will, I am sure, be regarded as more than usually satisfactory. It is very gratifying to be able to point to a substantial advance in all branches of the company's business. The splendid increase in the company's earnings as shown by the statement, is worthy of especial mention.

Our assets have now reached the handsome sum of $525,786.10, while our subscribed capital now amounts to $1,250,000.

It is with much satisfaction that I congratulate the shareholders that we have been able to carry the sum of $41,488.95 to the reserve fund, which now amounts to the very creditable sum of $100,680.93, or a little more than 30 per cent. of our paid-up permanent capital.

In referring to the loan department, I may say that great care and discretion has been exercised in placing our loans. Ample proof of this is shown not only by the small amount of interest arrears, $561.15, due at the close of the year, but that we have had not a single dollar of property on our hands. Considering the large amount of money we now have invested in first mortgages, this is, indeed, a very gratifying showing.

It might be well at this point to refer briefly to the figures of last year (1904) as contrasted with those of this year (1905).

At the close of 1904, we had loaned on first mortgages $231,800, while at the close of 1905 we had $517,500 on first mortgages, being an increase of $285,700, or $53,900 more than double the amount we had the previous year.

In 1904 the interest due and accrued on loans amounted to $385.55, while in 1905 the amount was $561.15. While there is a slight increase in this item, yet the percentage of interest due the company has been materially reduced, because our investments on first mortgages for 1905 are more than double that of 1904.

In 1904 we had $50,660.69 in the bank, while in 1905 we had only the small sum of $3,023.53, showing that our funds were kept actively employed during the year.

Our reserve in 1904 amounted to $59,191.98, while our reserve for 1905 was $100,680.93, showing the splendid increase of $41,488.95, which was made up as follows:

Premium on capital stock	$29,971 24
From surplus interest profits	11,517 71

In 1904 we carried $23,406.59 premium to the reserve fund, and $8,018.18 from the interest profit account to the reserve, being an increase for 1905 of $6,564.65 for the premium account, and $3,499.53 for the interest profit account.

Our total subscribed capital at the close of 1904 was $855,525, while at the present time it reaches the handsome sum of $1,250,000, or an increase of $394,475.

While the company has made phenomenal strides, our success is due to a large extent to the fact that we are a Western company, and with our board of directors all Western men, thoroughly conversant with conditions in the West, we have been able to share to the fullest extent in the general and widespread prosperity in the Western country.

The continued prosperity in the West will naturally be of immense benefit to our company, as with the rapid development in the Western cities and towns, there will be an ever-increasing demand for money. We are thus enabled to select the very best loans and at the same time profit by an excellent rate of interest.

It is to-day generally recognized that our Western country has not only passed its experimental stage, but has rapidly developed into a rich and promising country, abounding in wonderful natural resources and with a splendid future in store for it. I feel sure that our shareholders must realize that our company is most advantageously situated to carry on operations on a large and successful scale.

The company during the past year extended its field of operations to the Maritime Provinces, as well as opened up a branch office in Victoria, B. C. It is our intention, this year to thoroughly establish our business in the two new Western provinces—where, no doubt, we will meet with great success. With our very thorough organization, especially in the West, our company will be able to handle its business in the most energetic and expeditious manner.

The condition of our company at the close of this, our third business year, is almost unique in the annals of Canadian loan companies. Our company's growth has been phenomenal; in fact, our progress has been very much greater than the directors' most sanguine expectations.

We greatly appreciate the ready response shown by the shareholders in paying up on their stock during the past year, and would ask them for a continuance of their hearty support, so that this may be a banner year in the history of the company.

Under these circumstances I have no hesitation in moving the adoption of the very satisfactory report which has been submitted to you.

Dr. E. S. Popham, vice-president, in seconding the adoption of the report, said:

With the annual statement in your hands and with the address which the president has just delivered, very few words on my part will be necessary. In fact I have practically nothing new to add. I will not refer to the figures which were so thoroughly brought out in the report and the mover's address.

There are one or two points, however, with which I would like to deal. The first is the great care exercised by the directors in selecting all the loans that are passed by the board. The utmost caution is observed.

I would like you to fully realize this, so that you may have a proper conception as to the judicious and careful manner in which the funds placed at our disposal have been invested.

I think the best proof of this is the small amount of interest arrears, as shown in the report, and since the 31st of December even this small amount of arrears has been practically wiped out.

I am indeed pleased with the report which has been submitted to you. We are very pleased to report, that at the end of our third year's business, we have practically no in-

By order of the Board,

Toronto, 27th February, 1906. W. D. ROSS, General Manager.

The Traders Bank of Canada.

Notice is hereby given to the shareholders of the Traders Bank of Canada that a special general meeting of the shareholders of said Bank will be held at the Banking House, 10 Front Street West, in the City of Toronto, at the hour of twelve o'clock noon, on Tuesday, the 17th day of April, 1906, for the purpose of considering, and if approved, of passing a By-law increasing the capital stock of the Bank owing to the great expansion of its business, and to consider the day upon which the Annual General Meeting shall be held, changing the date from June to January, and also to discuss the question of paying the dividend quarterly instead of half-yearly as at present.

Dated at Toronto this 26th day of February, 1906.

By order of the Board.

H. S. STRATHY,
General Manager.

terest arrears and not one dollar of real estate on our hands. This is a splendid evidence of the great precaution that has been exercised by the directors in the selection of loans.

Another feature to which I would like to draw your attention is the class of buildings on which we loan your money. Fully 90 per cent. of the houses on which we loan are fully modern in every respect.

I have been on the board of directors since the organization of the company, and I must say that not even on one occasion, if one director has shown any disinclination whatever, to pass a certain loan, have the other directors insisted on passing the loan, but in every case have declined the loan in deference to the opinion of the dissenting director. The amount loaned never exceeds 50 per cent. of the cash value of the property.

The shareholders may rest assured that their money is absolutely safe and that the dividends on their investments will continue to be highly satisfactory.

Our shareholders have capital security as there is no better security known than first mortgages, judiciously selected, on improved real estate.

The auditors' report is an exhaustive one; The auditors have made a thorough audit of the company's books and the officers of the company were most willing to furnish the auditors with all the necessary information to make a very thorough audit.

I have, therefore, much pleasure in seconding the adoption of the report.

Mr. N. Bawlf, in support of the motion, said:

It is very gratifying, indeed, to have such a splendid report submitted to us. In fact, it has been a most pleasant surprise to us all.

By referring to the report, I notice that we have not a single dollar of real estate on our hands, and practically no interest in arrears. This is a state of affairs which should be much appreciated by the shareholders, considering the fact that we have a very large amount of money loaned on first mortgages.

I do not know of any other company, and I am connected with a great many, that has made such a splendid showing, and that is in a more healthy condition. This is a splendid evidence that the directors and officials of the company have exercised great care and judgment in looking after the interests of the shareholders. The dividends to the shareholders have been most satisfactory, and in fact I have no hesitation in saying that I do not know of any other company that has made such splendid progress in the last three years.

Mr. E. F. Hutchings said:—

Along with the others I would like to say that I am very pleased with the excellent report.

In fact, I am proud of the "Great West" institutions, and I think I hold stock in most of them, and I would like to see them all prosper. The time has come when we ought to have more home institutions, and thereby keep our money circulating in the West. If this policy is inaugurated and generally adhered to, it will greatly assist in the rapid development of our western country.

After several items in the report had been discussed at length, the motion was put and unanimously carried.

It was moved by Mr. N. Bawlf, and seconded by Mr. J. Obed Smith, that the management be instructed to have the report printed and distributed among the shareholders for their general information.—Carried.

It was moved by Mr. N. Bawlf, and seconded by Mr. E. F. Hutchings, that the retiring auditors, Messrs. D. A. Pender and W. S. Ronald, be appointed auditors for the ensuing year.—Carried.

In moving a vote of thanks to the directors and officers Mr. E. F. Hutchings said:

I beg to move that the thanks of the shareholders are due and are hereby tendered to the directors and officers of the company for their careful attention to the interests of the company during the past year.

In seconding the motion, Mr. N. Bawlf said:

It affords me great pleasure in seconding the motion, and in doing so I might say that the stockholders should be all well satisfied. While the company is well organized, and is in a most prosperous condition, yet, in order that we may maintain our splendid record, it will be absolutely necessary for the directors to put forth every possible effort. The manager, Mr. W. T. Alexander, is to be congratulated for the efficient manner in which he has conducted the company's affairs. In fact, there is no other young man in the city who has made such a success of a financial institution. The directors are also to be congratulated for the valuable services rendered to the company during the past year.—Carried.

Mr. James Stuart, replying to the vote of thanks, said:

I rise to respond to the resolution just carried. For the directors and for myself, I appreciate the remarks of Mr. Bawlf regarding the services rendered by the directors. While the directors are in a manner secondary to the manager, yet they govern the placing of your money. In the matter referred to, Dr. Popham gave you some idea of the harmony existing in the board. If any one director hesitates about passing a loan on any property, I have always been pleased to see that the other members of the board, in deference to that member, have decided as he wills. This is, I consider, the most pleasing feature of the board's work. I am sure we are all pleased to know that the shareholders appreciate the services of the directors. We are all busy men, and can make use of our time, but the time must be given. I have never been on a board, and I have been on several, where there has been such regular attendance by the directors. I am very thankful to the shareholders for their appreciation.

Mr. E. D. Martin then addressed the shareholders as follows:

It always is and always ought to be a matter of great satisfaction to any man who has taken any work to do, to feel that it has been satisfactorily carried out. And any man who accepts the position of director of any company of this kind must find pleasure and satisfaction in the appreciation of his work by the shareholders. As a member of the board, I feel deep satisfaction in the resolution that has been passed to-day.

Mr. E. L. Taylor, being called upon, spoke briefly regarding the company's securities, as follows:

All the money loaned on real estate is on first mortgages. Before any money is paid out on account of a loan, the titles are carefully examined to make sure that they are in perfect order. Every mortgage in the vault is a first claim on the land. No possible question can arise as to the security.

Mr. Bawlf then rose and said:

I take much pleasure in moving that the retiring board be re-elected for the ensuing year. They have amply demonstrated that they have been quite capable of looking after the interests of the shareholders in the past, and I feel confident that they can do so in the future. Therefore, I am very pleased to move their re-election.

The motion was seconded by Major Mulvey.

On motion, it was unanimously carried.

The newly-elected board was comprised of the following gentlemen: W. T. Alexander, Esq.; E. S. Popham, Esq., M.D.; J. T. Gordon, Esq., M.P.P.; E. D. Martin, Esq.; Jas. Stuart, Esq.; E. L. Taylor, Esq., and F. H. Alexander, Esq.

At a subsequent meeting of the newly-elected board of directors, Mr. W. T. Alexander was elected president, and Dr. E. S. Popham, vice-president.

Board of Directors.—W. T. Alexander, president and manager; E. S. Popham, Esq., M.D., vice-president; F. H. Alexander, secretary; J. T. Gordon, Esq., M.P.P., Gordon, Ironside & Fares; E. D. Martin, Esq., wholesale druggist; James Stuart, Esq., president Stuart Electric Co.; E. L. Taylor, barrister-at-law.

Advisory Board.—N. Bawlf, Esq., president Northen Elevator Co., director Bank of Toronto; E. F. Hutchings, Esq., president Great West Saddlery Co.; D. R. Dingwall, Esq., jeweler; D. E. Sprague, Esq., lumber merchant; R. Hill Myers, Esq., Judge county court; Capt. Wm. Robinson, vice-president Northern Bank; president Dominion Fish Co., Selkirk; Capt. J. R. Wynne, Martin, Bole & Wynne Drug Co.; S. A. Bedford, Esq., superintendent Experimental Farm, Brandon; R. J. Blanchard, Esq., M.D.; P. J. McDermott, Esq., merchant, Minnedosa, Man.; Robert Martin, Esq., wholesale commission merchant, Vancouver, B.C.; A. F. Banfield, Esq., carpet merchant; Major Stewart Mulvey, secretary-treasurer Winnipeg school board; James G. Scott, Esq., manager Pacific Coast Lumber Co., Vancouver, B. C.; David Horn, Esq., chief grain inspector; Samuel G. McIntosh, Esq.; Robert Magness, Esq., inspector weights and measures; John T. Spiers, Esq., baker and confectioner; R. M. Simpson, Esq., M. D.; Hugh Armstrong, Esq., M.P.P., Portage la Prairie, Man; Thomas W. Boddy, Esq., capitalist, Portage la Prairie, Man.; H. Sandison, Esq., alderman, city of Winnipeg; W. J. Wilcox, Esq., capitalist, Virden, Man.

* * *

—Winnipeg grain dealers are said to have in course of formation a syndicate for the purpose of insuring elevators and their contents, they considering, it is alleged, that the elevator owners have been paying too much to the fire insurance companies in the way of premiums, in comparison with what they had received.

* * *

—Mr. W. C. Matthews, general manager for Canada of R. G. Dun & Company's Mercantile Agency, leaves in a few days for Calgary, Alberta, where he will open a branch office for that firm. The rapid growth of the Canadian West renders this step necessary, and it is an evidence of the commercial importance of Calgary that it should be chosen as the city where the first office is opened in the new Province. We are told that Mr. Matthews will visit Vancouver before returning to Toronto.

NOTICE TO SHAREHOLDERS.

A Special General Meeting of the Shareholders of the Company will be held at the principal office of the Company at Montreal on

Monday the 19th Day of March, next,

at noon, pursuant to the Act of the Parliament of Canada. 55-56 Victoria, Chapter 35, entitled "An Act respecting the Canadian Pacific Railway Company" for the purpose of considering and, if approved of authorizing an increase of the present authorized ordinary capital stock of the Company from one hundred and ten million dollars to one hundred and fifty million dollars, being an increase of forty million dollars, and of determining the amount or amounts and the time or times of the issue or issues of said stock, the purposes to which the proceeds thereof shall be applied, and of adopting such resolutions or by-laws as may be deemed necessary in connection therewith in order to enable the Directors of the Company to give effect to the same.

The Common Stock transfer books will be closed in Montreal, New York and London at 1 p. m. on Saturday, February 24th instant; the Preference Stock books will be closed in London on the same date

All books will be re-opened on Tuesday, April 3rd, 1906.

By order of the Board,

CHARLES DRINKWATER, Secretary.

Mercantile Summary.

H. J. Littler and J. Mason have started in business at Vancouver under the name of the Terminal City Iron Works.

The Government of Queensland has ordered 500 bushels of seed wheat from Manitoba, and the purchase is being made by the Dominion Government on its behalf. A large similar order of grain from the North-West is said to have given great satisfaction.

Tenders for the construction of a new wharf at Pugwash, N.S., will presently be closed. The construction of this wharf will involve an expenditure of about $12,000, and will greatly improve the shipping facilities of that port. The wharf is to be about 300 feet long, constructed of crib work.

The rocks around Bucke township, in the Temiscaming district, bid fair, according to a correspondent of the Toronto "Globe," to become as famous for their metalliferous wealth as those in the precincts of Cobalt and Coleman. Important veins of cobalt have been found, while silver is said to be seen in fair quantities.

As an indication of the marvellously rapid growth of Vancouver may be given the figures of its port revenue. They were for last month:—February, 1906: Duty, $140,831.74; other revenue, $1,346.22; total, $142,177.96; exports, $382,588. February, 1905: Duty, $94,628.36; other revenue, $192.08; total, $94,820.44; exports, $426,404.

The Montreal and Great Lakes Transportation Company has been organized for the purpose of running a fast line of freight steamships between Montreal and Fort William. One vessel, the "Bickerdike," has already been purchased. The managing director is Mr. C. A. Jaques, of Montreal, while the president is Mr. Robert Bickerdike.

A remarkably early opening of navigation is the record this year for the Hamilton-Toronto route. The SS. "Macassa" arrived in the port of Toronto on Saturday last, and reaped the honor of being the first steamer to arrive so early in port in the history of Toronto. She had no difficulty in breaking a channel through the ice to her pier.

United States capitalists have secured a charter for a railway to be known as the Fort Frances, Manitou and Northern Railway, the prime object of which will be the development of the Rainy River district mineral deposits. At Fort Frances it is intended to connect with the projected Duluth, Rainy Lake and Winnipeg Railway, and in its course northward to make connection with the three great Canadian transcontinental trunk lines, the Canadian Northern, Canadian Pacific, and the Grand Trunk Pacific Railways. With the C.N.R. it is to connect at Fort Frances, with the C.P.R. at Dinorwic, and with the G.T.P. near Black Face Rapids.

TRUSTEE AND ESTATE INVESTMENTS

WRITE US FOR BOOKLET AND LATEST LIST OF OFFERINGS.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST EAST TORONTO

Mercantile Summary.

An offer of 25 cents, cash, is made by I. Nantel, a manufacturer of boots and shoes in a limited way in Montreal. He also proposes to sell off the machinery and plant, and divide the proceeds *pro rata* among the creditors. He owes about $2,500.

The Vigars-Shear Lumber Company, Limited, Port Arthur, Ont., has been authorized to issue $200,000 worth of capital stock for the purchase of the lumber businesses heretofore carried on by Vigars & Co. and the Northern Land & Lumber, Co., including plant and machinery, etc.

The Howe Woodworking Co., Limited, of St. John, N.B., has made application for a voluntary winding-up order. The company was incorporated under Provincial laws in 1903, with an authorized capital of $10,000. Liabilities are shown at about $3,000, with assets of a like amount.

Sir Montagu Allan, of Montreal, who is president of the Acadia Coal Company, of Stellarton, N.S., and is interested in the development of eastern Nova Scotia, is said to be at the head of a syndicate which proposes to construct a railroad under the name of the Nova Scotia Eastern from Dartmouth to Guysboro', with a branch from near New Glasgow to Country Harbor.

The Australian Government has agreed to alter its tariff regulations so that all goods shipped to the Commonwealth from Eastern Canada, via Vancouver, shall have to pay no higher duty than if they are shipped by way of New York. Mr. Larke, Dominion Commercial agent in Sydney, in announcing this change says: "This removes the disability against the port of Vancouver for Eastern shipments. I think it will also support the statement that there was not the slightest unfriendliness towards Canada on the part of Australia."

Recent minor country failures in the Province of Quebec are chronicled as follows: Eugene Fortier, formerly clerk for T. Belanger, dry goods merchant in Sherbrooke, bought out a branch business of Mr. Belanger's at Windsor Mills in the spring of 1905. He has just made an assignment of his estate.—P. Leblanc, a baker at Daveluyville, otherwise known as Ste. Anne du Sault, east of Three Rivers, is reported insolvent, and makes an offer of 35 per cent. on liabilities of $6,500.—E. A. Doucet, a bailiff of Fraserville, who has been doing a business in coal and wood, is seeking a compromise arrangement at 40 cents on the dollar. The proposition seems to have been a surprise to his creditors.—A drug business started at Magog last summer by Ernest Labonté, under the style of the Bazaar Pharmacy, has not proved a success. Last month he was reported as trying to compromise at 30 per cent., and now he has assigned. Liabilities amount to about $2,000.

Mercantile Summary.

The Canada Malting Company's malt house at Winnipeg was on the 10th inst. destroyed by fire at a loss of $24,000, well insured. The elevator containing some 45,000 bushels of barley was saved.

Further development work on the Tyee Mine, Mount Sicker, B.C., is believed to show that far from petering out as was claimed in some quarters, the ore at a low depth continues to be practically as rich as that of the earlier cuts.

The directors of the International Coal and Coke Company, of Coleman, B.C., stated at a meeting last week that the company's net profits for the year 1905 amounted to $67,327. Its present output amounts to about 1,000 tons daily. It owns 4,000 acres of land, containing two coal seams which, it is said, are 8 and 13 feet in thickness, respectively.

The Canadian Pacific Railway has decided, owing to the heavy increase of traffic between Vancouver Island and the mainland, to build another ferry barge on the route between Vancouver and Ladysmith to transfer freight cars from its main line to its E. and N. branch on the Island. The vessel will be 245 feet long, and is likely to cost about $50,000.

A manufacturer of furniture in Montreal, Joseph Lesperance, has assigned on demand, and is said to owe $25,000 or $26,000. His principal business was the making of barbers' carved chairs, which have gone out of vogue of late, and he several years ago was elected as a city alderman, which did not help his business, and latterly he has shown various signs of financial strain.

After being brought up as a farmer, Adelard Meloche, of Ste. Genevieve, on the Island of Montreal, started storekeeping about five years ago with a capital of some $1,500, realized from the sale of his farm. Things did not go smoothly, however, and he has been found dilatory in settlements for some time past. He has now assigned at the request of his largest creditor. He owes about $3,500.—Wallace McKenzie, who has been doing a limited store business at Larose Station for the past two years, has assigned to J. McD. Hains.—Joseph Boudreault, a repatriated French-Canadian from Salem, Mass., set up last spring in a small store business at Les Eboulements, in the Saguenay district. He apparently had little experience of mercantile ways and means, and has now assigned to a Quebec firm of accountants, with liabilities of about $1,000.—J. Kane, a farmer on the Indian reservation of Caughnawaga, near Montreal, who has also been carrying on a small grocery business for several years past, is reported as seeking a compromise arrangement at 30 cents on the dollar. His assets, apart from his farm, which is non-seizable, are small.

DEBENTURES FOR SALE

CALGARY SCHOOL DISTRICT

Tenders addressed to the undersigned for the purchase of $90,000 of Debentures of the Calgary Protestant Public School District No. 19 in Blocks of $10,000 each will be received until 4 o'clock p.m., April 9th, 1906.

PARTICULARS

Total amount of issue, $90,000.

Rate of interest, 4½% payable yearly.

Principal repayable in 30 equal consecutive annual instalments with interest at the above rate, at the Imperial Bank of Canada, Calgary.

Purpose of issue: to erect and equip one solid stone school building and one solid brick school.

Total assessed value of School District, 1905, $5,433,469.

Estimated true value of taxable property within the limits of the District, $8,000,000.

Total Debenture debt of the District, exclusive of the present issue, $80,098.

Value of property owned by the District, $190,000.

School rate of taxation, 1905, 7½ Mills.
Population of the District (City of Calgary), 16,000.

Tenders will be received for the whole amount or for one or more blocks of $10,000.

The highest or any tender not necessarily accepted.

W. L. WAINES,
Secretary Calgary Public School Board,
Calgary, Alberta.

Mercantile Summary.

Preparations are being made so rapidly for the construction of the proposed electric railway to connect Seattle with Vancouver that it is fully believed trains will be running over parts of it by midsummer of next year. A continuous speed of fifty miles an hour is aimed at. The trains are to enter Vancouver over the tracks of the British Columbia Electric Railway Company from New Westminster. The long-distance road is to run from Blaine, on the boundary line, to New Westminster, through a route slightly different from that now served by the Great Northern Railway. The Fraser River will be crossed by means of the Provincial Government bridge, which is now used only by the Great Northern Railway and vehicular and pedestrian traffic.

On Monday last A. S. Johnson's general store at Thetford, Que., was totally destroyed by fire at a loss of $20,000 or more, with insurance of $13,000; Mrs. Baker's millinery store at Gananoque, Ont., badly damaged, loss $8,000, partly insured; the new furniture factory at Fenelon Falls, Ont., gutted.

A by-law was passed almost unanimously on Monday last at Smith's Falls, Ont., in favor of loaning the Frost & Wood Company $150,000 to assist them in re-building their shops, which were recently destroyed by fire. The company is having plans prepared for some very large modern shops.

Two new school houses, one of stone and one of brick, are proposed to be built in Calgary this year. The secretary of the school board advertises in our columns to-day 4 1-2 per cent. thirty year debentures for this purpose. The assessed value of the school district this year is $5,433,000 and its previous debenture debt only $80,000. The population of Calgary is 16,000, so his letter says.

Consent to assign has been filed by Gustave Anatole L. Rolland, doing business as a manufacturer of furniture in a small way in Montreal under the style of Rolland Bros. & Co. His father, who had formerly been engaged in a similar business under the same style, and who failed several years ago, appeared to have more or less interest in the concern. The liabilities are placed at about $3,000.

The C.P.R. have let a contract to the Canadian Shipbuilding Company for the construction of a passenger and freight steamer of the most modern type, and with a sustained speed of fifteen miles an hour, for its service between Owen Sound and Fort William. The new vessel will be 350 feet long by 44 feet beam, having quadruple expansion engines. The contract calls for the delivery of the boat in the spring of 1907. The boat will be the largest of the company's fleet plying on the upper lakes. Lake business has increased to such an extent that another vessel is necessary to meet the freight and passenger traffic demands.

We learn from the Edmonton "Bulletin" that Mr. John Wilson, of Collingwood, Ont., is a visitor to that city for the purpose of organizing a company to build a pork packery in Edmonton to cure and ship Alberta pork to the Old Country market. "Mr. Wilson comes recommended by the Collingwood Meat and Packing Co., whose works he erected two years ago, and has Mr. Enright associated with him." Mr. Wilson's proposition is this: The building of a plant to handle 2,000 hogs a week, and the establishment of the business on a running basis would require a capital of $125,000. He wants three local business men of standing to take $5,000 stock each and accept a place on the directorship of a company to be organized in Edmonton, and to take an active interest in the business. After that, he wants the balance of 50 per cent. of the capital subscribed locally. He is in a position to find one-half the capital in the East, and says that Thos. Long, of Toronto and Collingwood, will take stock and become a director.

Mercantile Summary

A general dealer at St. Eugene, Ont., named J. A. Raizenne, lately reported as failed, is making an offer of 40 per cent. on liabilities amounting to about $4,000.—H. D. Tackaberry, grocer, Kemptville, Ont., has assigned. He began business in 1903, and owes $1,450, while showing nominal assets of $1,080.

The well-known machinery firm of H. W. Petrie, Toronto, has established a branch in Montreal at the corner of St. James and Little St. Antoine Streets. It already has a good connection in the Province of Quebec. It will carry a complete stock of saw-mill and wood-working machinery, hoisting engines, boilers, etc.

A large area of dyked lands in the Pitt River district, some twenty miles from Vancouver, have been sold to a syndicate of American capitalists who will sub-divide it and settle farmers upon it. It is understood the B. C. Government will shortly construct a number of roads and bridges in this section, which seems likely to progress at a satisfactory rate.

The Scottish Co-operative Wholesale Society are said to be negotiating for the purchase of 100,000 acres of land in the Saskatchewan valley for the purpose of growing wheat for transportation to Great Britain, where it will be converted into flour at the mills of the society. The society proposes to subdivide the tract among a good class of settlers, who will be provided with capital and the means for being set up in life.

The Western Central Railway Co., which already has power to construct a line from London to Guelph, now wants to extend its line and to enter Toronto. Under the provisions of the bill the company would have authority to purchase the Toronto Street Railway, and to amalgamate with it and arrange for running powers over its lines without the consent of the municipality, or, failing that, with the consent of the Railway Committee of the Executive Council.

The third annual report of the Havana Electric Railway Company makes a good showing. Surplus, on the year's operations, after expenses, taxes and charges have been provided for, amounted to $370,922, which is a most creditable showing. The latter sum, added to the amount of $139,192 brought forward from 1904, will make a satisfactory balance of $509,073, to the credit side of the profit and loss account. Mr. Edwin Hanson, the president of the company, in his address gave foundation for the belief that a dividend on preferred stock would be declared in the near future. The ratio of expenses to gross earnings during the year was very low, being only 49 per cent., compared with 56 per cent. in the previous year. The surplus for 1905 was $370,922, as against $137,608 in the year previous.

AGENTS WANTED in every unrepresented District in Canada.

The Niagara, St. Catharines & Toronto Railway Company have placed an order for 5,000 tons of 80-pound steel rails for extensions and improvements. The first work to be taken up will be relaying the entire main line of the Niagara, St. Catharines & Toronto Railway between St. Catharines and Niagara Falls, while the extension of the line to Fonthill and Welland is to be pushed as rapidly as possible. An order has been placed, we understand, with the Canadian Shipbuilding Company for a new steamer for the Port Dalhousie-Toronto route. Arrangements are being made with the International Railway Company for an improved service between Bridge Street, Niagara Falls, N.Y., and Buffalo.

Incorporations at Ottawa up to close of last week are reported as under: The Geo. Phillips & Company, of Montreal, Limited, incorporated with a capital of $20,000 to carry on a jewellery business; Dominion Foundry Supply Company, with a capital of $50,000, and headquarters in Montreal. Hon. Robt. Mackay, R. G. Reid, John Beattie, F. J. Travers, A. R. Mackay, and others, of Montreal, have been incorporated as the Canada Radiator Company, with a capital of $1,000,000, and headquarters at Lachine; F. C. Hersch, Thos. Hanley and R. Bartholemew, of Montreal, and others, incorporated as the Telegraphone System of Canada, with a capital of $50,000, and headquarters at Montreal; the Merchants' Awning Company, of Montreal, with a capital of $40,000. The principal incorporators are Honore Gervais, M.P., R. L. Prieur, H. L. O. Donohue.

WESTERN RHETORIC.

Our readers have been given opportunity of reading in our columns several times of late specimens of the poetry and philosophy ot mining camps. Among the exchanges which have come to us this week is "Lowery's Claim," of Nelson, .B.C.; and we give some extracts below from the front page, the sententious sayings on which we take to be Mr. Lowery's own. For example:—

Easy money generally proves a curse to the one who gets it.

Remember, sonny, that you cannot punch a hole in a bank safe with a cigarette.

In Nevada water is so scarce in some of the mining camps that saloons cannot afford to put it in the whiskey.

If you crave for the simple life in all its glory, come west and grow up with the fruit trees in the mountains around Nelson.

Hell has been thoroughly discussed in Toronto this winter, and some think that it is the cause of the mild winter back East. Strangers with a thirst can always find hell in Toronto on Sundays.

[N.B.—It was the "Golden Star" man, and not Lowery, who recently visited "Back East."Ed. M. T.]

Vice, crime and misery are almost entirely produced by environment. If poverty could be crucified by changed social and economic conditions the days of jails, parsons, and policemen would be remembered only as hideous dreams of the past.

It is only fair to say that the selections from other journals to be found in its sixteen pages are often as full of pungent humor as the editor's own nuggets. He is sometimes mildly platonic in his wisdom; sometimes carelessly profane. His paper is a good dollar's worth, any way.

* * *

TORONTO MARKETS.

Toronto, March 15, 1906.

Chemicals, Drugs, etc.—Opium and quinine, the chief staples, continue much as last reported, dull, though an improvement is to be noted of some small extent in quinine, owing to strong reports from Europe. Carbolic acid, menthol and camphor are all fairly firm. The trade being carried on at local and country points is fully up to average. Prices for the most part remain steady. From Manchester comes word that, in respect to chemicals, some good business has been done during this month, but latterly there would seem to be some slight signs of slackening. This, however, would not be surprising after the recent well-continued period of buying and selling; consumers can busy themselves in working off their purchases, and makers being well engaged can regard without concern an interval easier in new business. The general position continues sound, and the outlook appears to be not unsatisfactory. In heavy alkalies there is really nothing new to report: values are steady all round, works are busy, and there is a fair amount of new business coming forward. In January, 1906, as compared with January,. 1905, the exports of bleaching materials showed an increase of 1,335 tons, or £5,023, but it is surprising to note in soda compounds a decrease of 1,149 tons, or £14,281. In tar products there is a fair amount of trade passing, but the general tone is slightly easier. Solvent naphtha continues in good demand, and very firm, and stocks are low. Benzole has only a moderate enquiry, and any business transacted is at some little reduction on recent figures. Creosote is rather neglected at present; makers are in no way pressing, and consumers are easy, having good stocks. Crude carbolic has a good demand, and some good sales have been made at full figures.

Dry Goods.—As was anticipated last week, the trade, though by no means poor before, showed material improvement last week, owing no doubt to the presence in the city of many visitors to the millinery openings, who took advantage of their being in town to look over spring stocks and to give several sorting orders, which have greatly helped to augment the volume of business done. Apart from this there is no feature worth commenting on, except that prices keep as firm as ever for all lines of staple goods. Linens particularly are strongly held.

Flour and Grain.—Somewhat more enquiry has started up for wheat and oats, but apart from that, trade has been very dull, with few actual transactions. Bran and shorts hold their strength, and prices show no disposition to decline. The quotation bid for ninety per cent. patents is extremely low, only $3 in buyers' sacks, and .not much business is passing at such a rate.

Groceries.—Wholesale houses report a pretty good business, and this is likely to improve before the end of the month. Sugars advanced 10c. in the middle of last week, and the movement since then has been fairly brisk, with a hardness in values quite perceptible. Molasses has declined 25c., and the situation in that line is rather a quiet one. Teas are in improving demand, especially Ceylons, both greens and blacks. Coffee is a little on the weak side, with very favorable reports from Brazil as to crop. Ginger has advanced 2½c., but the demand for that and many of the spices is rather on the light side. There is a good enquiry for canned goods, especially tomatoes, which have gone up another 5c. There is considerable scarcity in this line.

Hides and Leather.—Since the decline in prices the market has been quiet, though no further change is recorded. Tallow is unchanged. Leather prices remain practically unaltered. Not a very great volume of trade is being carried on, but the undertone to the market is satisfactory.

Provisions.—Prices for choice butter are good, the quality of most of the offerings not being up to the mark. Cheese is quite firm, and advanced half a cent or so a few days ago. Deliveries of eggs have not been so heavy since the colder weather. Poultry prices are fairly firm. Beans are unchanged at $1.75. Smoked meats are steady to firm at old prices.

Wool.—No business is being done, and prices are purely nominal.

Every Insurance Requirement is Covered by The Policies of THE GREAT-WEST LIFE.

Provision for old age, Protection for dependent ones, Endowment for maturer years, Young People's Policies, and all arranged to give the highest possible returns at the lowest cost consistent with sound business principles. Full information on request.

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

MONTREAL MARKETS.

Montreal, 14th March, 1906.

Ashes.—Receipts are small, but the demand is equally light, and there is no evidence of stiffening in values. We quote about $5.15 for No. 1 pots; seconds, $4.65 to $4.70; No. 1 pearls nominally $7 per cental.

Cements and Firebricks.—As the season for general outdoor work approaches, a more general enquiry for cements has arisen, and prices for new importations of English and Belgian makes are expected to open on about the parity of last spring's figures. Prices from stock remain as given last week.

Dairy Products.—The Liverpool cable yesterday showed some further slight advance in cheese, and the local market here is steady to firm at 13 to 13½c. for best Western makes. Some receipts of new milk butter are reported, and are quoted at 22 to 22¼c.; finest October creamery brings about the same figure; undergrades, 20 to 21c.; dairy, 19 to 20c. per pound.

Dry Goods.—Business in this line is not as active among wholesale dealers as last week, owing to a return of sharp cold weather, and city retailers have not as yet experienced any great demand for spring fabrics. General collections, however, are reported as being fairly maintained. An advance is reported of from 10 to 15 per cent. in both Scotch and Irish linens, but apart from this no changes in values are reported.

Fish.—There is a good Lenten demand, and some lines of pickled fish are now in light supply, more particularly herrings. We quote Labrador herrings, $5.50 half barrels; North Shore salmon, $13 in barrels; ditto, halves, $7.50; B.C. salmon, $12.50 in barrels; lake trout, $4.50 per keg; No. 1 mackerel, $2 per pail; large green cod, 5c. per lb.; medium ditto, 4c.; boneless cod, 6c.; haddies, 5½ to 6c.; bloaters, $1.10 per hundred; fresh haddock, 6 to 7c.; large frozen herrings, $2 to $2.10 per hundred.

Groceries.—A fair, general movement is going on, and last week's full report fairly covers the situation in this market at date. Sugars remain on exactly the same basis. Molasses is easy in a jobbing way, at 30c. for Barbados in single puncheons, and 32½c. in barrels, All lines of dried fruits are regarded as pretty good property, supplies being light, and the same remark applies to canned goods. For gallon apples, packers are now quoting $2.50 in quantity. For evaporated apples, 11½c. is now asked in a jobbing way, and 6½c. for ordinary dried apples. Great firmness is noted in tapioca and sago, the cultivation of these articles in the East having been much curtailed of late years, and 6½c. is now quoted in a jobbing way, more than double the figures of a year ago.

Hides.—Beef hides are a shade firmer at 11c. per lb. for No. 1. Calfskins are easy at 12c. for No. 1, and 10c. for No. 2. New lambskins are yet in very light supply, and are quoted at 10c. each.

Leather.—Splits are reported as being freely exported to Britain, the demand from that quarter being excellent; there is also a fair export movement in sole. In the local market a fair general movement goes on. We quote best Ontario splits at 23 to 26c.; Quebec, ditto, 18 to 20c.; juniors, 17 to 18c.; Scotch grain, 17c.; buff and pebble, 14 to 16½c.; harness, 32 to 34c.; chrome calf, 24 to 25c.; No. 2, mfrs. sole, 25c.; No. 2, jobbing ditto, 26c.; slaughter, 29 to 30c.

Metals and Hardware.—A good active movement is still noted in these lines, and values generally are firmly held, though some purchasers have been holding back orders in anticipation of easier English quotations for sheets, plates, etc., which, however, have not as yet developed, and agents of manufacturers in that quarter claim that all their advices continue of a firm tone. Canada plates are quoted at $2.60 for fifty-twos; black sheets, $2.40; galvanized sheets, $4.10 to $4.35; Ternes, $6.85; tinplates, $4, and $4.25 for standard cakes and charcoals respectively; boiler plate, $2.40; iron pipe, $4.39 for inch; bars, $2.05; wire nails, $2.15; cut ditto, $2.10. Ingot tin is firm at 40 to 40½c.; copper, 20½ to 21c.; spelter, 7 to 7¼c.; lead, $4.40; antimony is again dearer, at 17½c., and only one firm here has any stock, and that of limited extent.

Oils and Paints.—Linseed oil is easier locally at 54 to 55c. per gallon for raw, and 57 to 58c. for boiled. Turpentine is steady at 98c. per gallon in single bbls. Manufacturers of Paris green have advanced prices by several cents per lb., but the main bulk of jobbing orders have been booked at old figures. Leads, window glass, etc., remain without change.

* * *

Morrison's general store, the Windsor Hotel, and several other buildings at Wolseley, Sask., were last Sunday destroyed by fire at a loss of $30,000 to $40,000.

CANADIAN RUBBER COMPANY.

The Canadian Rubber Company, of Montreal, held its annual meeting on Thursday of last week at the head offices. This company is now something over fifty years in existence, and the growth of its business has been remarkable. Of course, in a country having as much snow as Canada there must always be a demand for quantities of rubber boots and shoes; and with the extraordinary variety of uses to which rubber has in recent years been put the product of rubber works will increase if they keep up with demands of trade. There was a period during which, from whatever reason, the business of the company seemed to languish, and an adequate return was not made for the enormous outlay upon buildings and plant. There has been a reconstruction, however, and within the past year or two a very great improvement has been effected in the plant and organization. An idea of the extent of this concern's operations may be had from the fact that its works cover twenty-one acres of ground, but are not yet large enough, and it employs 2,500 people, with a prospect of more before long.

The annual meeting just held was of unusual interest. It was stated that, while in the past two years half a million dollars has been expended in additions and improvements, there is need of further expansion, and more than $150,000 is allocated to be spent this year in putting up new factory premises. According to the report, which was considered a very satisfactory one, despite the high cost of raw materials during the past year, a large increase in profitable business was gained. The dividend declared was 5 per cent. There has been a considerable change in the proprietary, as is indicated by the change in the board of direction. It appears that Messrs. Stephens, McGibbon, Ogilvie and Pringle had secured a controlling interest in the stock. When the meeting convened, Sir Montagu Allan, the president, being absent, Mr. J. B. Learmont, vice-president, took the chair and moved the adoption of the annual report, which was carried without even being discussed. When the election of directors was reached, there was no disturbance, as had been expected. Mr. H. Markland Molson, a member of the old board, moved that the entire ticket selected by the new interests in control be elected by the casting of one ballot, when Mr. H. Joseph suggested that, in view of the radical change being made, it would be advisable to have a stock vote. The majority, however, decided in favor of a single ballot. The names of the retiring directors are Sir H. Montagu Allan, president; J. B. Learmont, vice-president; C. F. Smith, Andrew Allan, H. Markland Molson, Lieut.-Col. F. C. Henshaw, Alfred Piddington, Hugh A. Allan, Lieut.-Col. Hector Provost. To these gentlemen a vote of thanks was accorded by the meeting, which proceeded to elect a new board composed of the following: President, G. Washington Stephens, M.L.A.; vice-president and managing director, Mr. D. Lorne McGibbon. Directors—Messrs. Shirley, Ogilvie, Alex. Pringle, M. C. Mullarky, H. J. Fuller, Harrison C. Frost, C. C. Ballantyne and R. J. Younge.

SOME PENAL FIGURES AND CONSIDERATIONS.

Some of the conclusions arrived at by that authority in penology, Mr. Collins, superintendent of New York State Prison Institutions, are of interest, arousing new lines of thought. One noteworthy remark is that not one per cent. of the life prisoners who have been liberated in New York State ever have committed crime again.

A record of the life term convicts from 1870 to 1900 shows, according to Mr. Collins' figures, that seventeen per cent. become insane while in prison. Tables show that twenty-three per cent. of the life men at Auburn prison died in the first ten years of their terms. Very few life prisoners have any previous criminal record. In a great majority of cases their crimes were committed on sudden impulse, caused by a momentary frenzy of passion or the craze of intoxicants.

It is evident, therefore, that this class of prisoners is not really so great a menace to society as are the petty criminals who receive short sentences and return to criminal practices. The superintendent is confirmed in his opinion that if the indeterminate sentence is substituted for the life sentence fewer prisoners will be pardoned, fewer will die or become insane.

SEVEN TO ONE

That is about the ratio. About seven times as many persons are injured as die from all causes yearly.

Accidents are a more prolific cause of death than any disease except lung diseases.

Twice as many people are accidently killed as die of old age.

Does it not seem reasonable to you as a business man that it would be to your interest to carry an accident policy?

SCOTT & WALMSLEY,
ESTABLISHED 1858.
Managers and Underwriters.

In connection with this subject we are reminded that in Great Britain the average value to the nation of each adult is calculated at £31 6s. per year; but it is also estimated that there is a total loss to the nation of £480 on every child who turns into a pauper or a criminal. This is a startling consideration.

In the Boer War, says Arnold White in his "Efficiency and Empire," out of 11,000 young men who volunteered at Manchester for service 8,000 were found to be physically unfit to carry a rifle or to undergo the fatigue of discipline. Of the 3,000 accepted, only 1,200 had the muscular power and chest measurement required in the army. One may hope that the locality named is exceptional. In view of this and other facts a writer in the August "Westminster Review" argues that the State should assume parentage towards such persons as by descent and environment are year by year lowering the physical standards of the nation.

MARSHALL FIELD'S PECULIARITIES.

Quite a number of stories have been told in the Chicago papers by persons who know of the facts whereof they write. One of these letters tells the following characteristic story: Away back in the 70's a customer of the house from St. Joe, Mich., named B. T. King, happening to learn that Marshall Field wanted a good horse, brought one over and exhibited it to him. After looking the animal over carefully Mr. Field asked the price. Mr. King thought he was worth $350. Mr. Field thought $300 was about the right figure. That was finally agreed upon, and the bargain closed. Some years afterward, Mr. Field happening to see Mr. King on the street, stopped him, and, taking $50 from his pocket gave it to Mr. King, remarking as he did so: "That horse I bought of you was a better horse than I thought," and without more words walked away. Here was a man in whose honest soul wealth had wrought no canker.

* * *

THE FROST & WOOD FIRE.

It is interesting to learn that the town of Smith's Falls has resolved to assist the Frost & Wood Company, Limited, to rebuild the extensive portion of its premises destroyed recently by fire, by lending the company a large sum of money, or guaranteeing a loan. It is eminently proper that the town should do something of the kind. Frost & Wood are, and have been any time these sixty years, a part of Smith's Falls, and helped largely to make the town. They are worthy people, who began in a modest way, made good farm machinery, and grew with Canada until they and their products are known from Truro to Winnipeg. We have seen illustrations of the result of the fire to their works, and sorry is the sight. But the company appears in no wise dispirited. They tell us they are going to have the very best that can be obtained, both in the way of fire-proof buildings and of a modern, up-to-the-minute equipment, which will turn out machinery of the highest possible standard. Already they have a new roof on the blacksmith shop, all the debris is cleared away, and they will commence building operations just as soon as weather conditions will permit. May they go on and prosper.

* * *

A MARINE DECISION.

In the federal court at Chicago, on Saturday last, a decision was given by Judge K. M. Landis, in the case of the steamer "Argo," owned by Graham & Morton Company, of that city, which was driven ashore near Holland, Mich., last fall. The decision is of importance to marine interests, it being in effect that when a boat is placed in such a position that it will cost more than one-half of the original price of the boat to pull it out of danger and make repairs, the owners of the boat are justified in abandoning it and calling upon the insurance companies for the full amount of the insurance.

* * *

TEMISKAMING & NORTHERN ONTARIO RAILWAY.

Judging from the results up to this early date, the Temiskaming and Northern Ontario Railway is to be a pronounced success. Its earnings last year were over a quarter of a million dollars, while operating expenses only amounted to barely $140,000. Up to December 31st last, the cost of the road had been $7,475,473, or taking out profits from sales of wood, car rentals, and interest on deposits, $7,346,603.

The revenue consisted of:—Passenger earnings, $108,681.76; mails and express, $7,804.85; freight earnings, $121,530.26; telegraph earnings, $4,697.07; miscellaneous, $11,006.41; making gross earnings, $253,720.55. The operating expenses were:— Maintenance of way and structures, $25,072.89; maintenance of equipment, $12,533.68; conducting transportation, $88,823.52; general expenses, $13,823.52; total operating expenses, $139,772.50.

The net earnings are thus $113,948.05, and the percentage of operating expenses to gross earnings was 55 per cent. There were 86,648 passengers carried, and the average fare was $1.25. There were 99,192 tons of freight carried.

It is expected that track-laying should reach Black River, which is seventy-five miles north of New Liskeard, by June 1st next, and to the junction of Black and Abittibi Rivers by next fall. Preparations are being made to run trains over the first thirty miles of the second division. As to the electrification of the railway, a proposal which has attracted much interest, it is scarcely likely that anything definite will be done for some time yet, as though the commissioners look favorably on the scheme, yet it is recognized that running railroads by electric power is still in a somewhat experimental stage.

The Mutual Life Assurance Co. OF CANADA.

has had another prosperous year as may be seen from the following table:

The Metropolitan Life Insurance Co.
(INCORPORATED BY THE STATE OF NEW YORK)
The Company OF the People, BY the People, FOR the People
ASSETS, $151,663,477.29

Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec, Ottawa.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395	per day in number of Claims Paid.
6,972	per day in number of Policies Issued.
$1,502,484.00	per day in New Insurance Written.
$123,788.29	per day in Payments to Policy-holders and addition to Reserve.
$77,275.94	per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave., New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $3,000 000.00.

Mercantile Summary.

The Imperial Oil Company's grease plant at Sarnia, Ont., was destroyed by fire on Tuesday entailing a loss of $100,000, covered, it is understood, by a system of self-insurance.

The Plant Steamship Company is to put another steamer on the route between Boston and Halifax. She will be operated along with the "Halifax" and "Olivette," giving a tri-weekly service.

The McAlpine Publishing Company, of Halifax, has just completed the most successful year in the history of the business. They have declared a dividend of seven per cent. on the preferred shares, payable in July. The board of directors and officers were re-elected as follows:—H. W. Barnes, president; Geo. E. Boak, vice-president; Wm. Taylor, treasurer; J. C. McIntosh, Walter Mitchell.

The Canadian Mining Institute which has been holding its annual convention in Quebec City, elected officers as follows:—President, Mr. Geo. R. Smith, Thetford Mines, Que.; vice-presidents, for one year, Dr. F. D. Adams, Montreal; Major R. C. Leckie, Temagami, P.O., Ont.; for two years, Frederick Keffer, Greenwood, B.C.; G. Herrick Duggan, Sydney, C.B.; treasurer, J Stevenson Brown, Montreal; secretary, H. Mortimer Lamb, Montreal.

The following is a list of patents recently granted to Canadian inventors in Canada and the United States: T. D. McGregor, Peterboro', Ont., shirt cuffs; R. W. Penman, Galbraith, Ont., sawing apparatus; A. H. Switzer, Sutton West, Ont., snow, dirt and damp excluders for rubbers, snow excluders; C. E. Winks, Winnipeg, Man., throat protectors; J. W. Wright, Winnipeg, Man., collapsible tanks; F. W. Burpee, Vancouver, B.C., shingle machines; S. Voyer, Montreal, bar refrigerating apparatus; C. L. Higgins, Montreal, overshoes; J. P. Smith, Vancouver, B.C., concentrating tables; J. Dudley, Hamilton, Ont., turbine engines; C. J. Stuart, Montreal, engines, turbine engines; G. Bunker, Toronto, plasterers' hawks; J. Armstrong, Toronto, coffee pots; F. W. Stewart, Montreal, and J. D. Belyea, St. John, N.B., shirts; J. E. Canham, Sprague, Man., frogless railroad switches; W. D and A. B. Mitchell, Toronto, stand-up, turn-down collars, made of celluloid or other suitable composite material; A. H. Power, Toronto, furnace pipes; J. W. Ratz, Tavistock, Ont., hot air registers; J. A. Sayward, Victoria, B.C., appliances for loading and unloading lumber trucks; G. Valiant, Toronto, ventilated shoes; M. J. B. L. Wylie, Orangeville, Ont., clothes boilers; J. A. A. Rouleau, St. Cunegonde, Que., linings of converters and zinc retorts; E. Beaumont, Toronto, moulds for concrete blocks; J. H. Roedding, Tillsonburg, Ont., rubber soles and heels for footwear; J. P. Northey, Toronto, sound-producing devices, suitable for syrens or like instruments; A. L. Martin, Niagara Falls, Ont., monkey wrenches; A. Charland, Lake Megantic, Que., alarms for gauges, clocks, etc.; R. Stanford and P. R. Colpitt, Halifax, N.S., signals; D. G. McKenzie, Victoria, B.C., cash change-giving devices.

A Policy-Holder's Company

The North American Life Assurance Company has a Guarantee Fund of $300,000, of which $60,000 is paid up in cash. Interest is allowed on this paid up portion only. Policyholders thus obtain **additional security of $300,000** and what is of greater importance, are **assured of careful and conservative management** as the Guarantors are liable for this amount. By the Company's Act of Incorporation, every holder of a participating policy in the Company, upon which all premiums due have been paid, shall have one vote in person for each $1,000 of insurance held by him. Policyholders are thus given **a voice in the management** of the Company's affairs. In short, it may be said that the North American Life is neither a Mutual nor a Stock Company yet **possesses the advantages of both.**

THE INSURANCE INVESTIGATION.

It is too early in the investigation now being made at Ottawa before the Insurance Commission to say what will be its final result. Thus far the enquiry has mainly been confined to the examination of Mr. Fitzgerald, the Superintendent of Insurance, and of Mr. Blackadar, the principal actuary of the Department. The former gentleman appeared to assume a defensive attitude, contending, for instance, that he had little if any power to control the investments of companies. He might with propriety, it seems to us, have taken a bolder position, and declared that he was not expected or empowered to do an auditor's work, for which indeed the equipment of his office was in no wise adequate. But if Mr. Fitzgerald was backward, Mr. Blackadar was absolutely timid. Neither of these gentlemen, unfortunately, gave an impression of frankness in their evidence, although it is everywhere admitted that they are honorable officials, and Mr. Blackadar is unquestionably a clever mathematician and actuary, of an unhappily nervous temperament.

Of course, the main intended object of the examiners of the Department of Insurance has been to satisfy themselves and the insuring public that the companies doing life underwriting in Canada were solvent, and able to carry out the undertakings of the policies they issued. And in the main, their investigations have for years established such solvency. But in our opinion there was warrant for these officials going further, and declaring to the Minister anything they found in the management of companies that savored of extravagance or speculation. The mere bigness of a company and the influential character of its directors should not deter a trusted official from declaring that companies had no right to do such and such things, and that they should be stopped, even though the specific letter of his instructions may not cover the problematical items he may come across.

Writing down of securities once a year by an insurance company if these securities have declined in market value is a prudent and proper step; and two business men out of three will contend that by a parity of reasoning, writing up of securities to their market value ought not to be condemned. But it is not the proper business of a life insurance company to deal in notoriously speculative securities, especially foreign ones. It is done, we know, and is justified (by the doers) on the ground that profit has been made for the policyholders by the buying and selling of these. Still it is wrong, all the same. The contention of one company that its charter permitted investments, which the Department held the Insurance Act did not, will doubtless be pronounced upon in a definite manner. There should be no conflict of authority in such a matter.

A list of questions has been prepared, apparently by the legal advisers of the commission, and are put to managers of life companies in the form of a circular. They are sixty or seventy in number, and cover an immense field. Some of them are of undoubted appropriateness and importance; others look as if they may have been prepared for the American market. They give, however, the impression that the commission is resolved upon thoroughness. Putting the question yesterday to managers of two Toronto companies how long it would take to furnish answers to this set of questions, the reply of one was; "anywhere from three to six months;" and of the other, which was a larger company: "We should need an extra staff, and even then it would take ten or twelve months." Somebody, therefore, will have to foot a bill whose aggregate will be something generous.

Meanwhile, the stir that has been made in Canada in the last few months consequent upon the revelations before the New York Commission, and now the discovery of some irregularities by several of the Canadian companies has a deadening effect upon the procuring of new insurance. An agent in Quebec writes to us on Monday last: "I wish this commission would hurry up its enquiry, and tell us what companies are honest and what ones are unfit to be in the swim. My business is almost dead, because fellows everywhere round here tell me they don't know who to trust." And we learn from several Ontario sources that it is hard to write new risks, because many people both in town and country are grown suspicious of *all* life companies. This is most unfortunate. It means serious deprivation of income to many hard-working agents, and it means a loss to companies which have made agency arrangements for the year conditioned upon a normal inflow of business.

Now that an orderly and not a hysterical investigation is being made; now that numerous counsel have been engaged to look after the interests of policyholders of different provinces, people may possess their souls in patience and in the belief that the worst will be laid bare. Should universally known practices in life assurance, such as rebating, and less known improprieties, such as speculative dealings in stocks and bonds, be forbidden to life companies in Canada, the long and expensive investigation now entered upon will not have been in vain. The result can hardly fail to be an amendment of the Insurance Act, and provision for having its decrees for the management of policyholders' funds carried out.

* * *

COUNTRY HOTEL ACCOMMODATION.

Different associations of commercial travellers have at various times drawn attention to the defects in accommodation which country hotels often show. And their efforts have done a good deal towards having reasonable comforts provided in hotels where previously the beast had more attention than the man. Indeed it is not too much to say that the efficiency of the hotels in Ontario to-day, and the obligations under which the hotel-keeper is put to provide proper accommodation for the travelling public, are largely due to the representations and efforts of commercial travellers. We now learn, from a circular issued by the Travellers' Club, of London, that much of the educative work done in this direction is likely to be of no avail. There will, it seems, be many places in Ontario where it is necessary for travellers to go in the prosecution of their business where no accommodation for them will be provided. This because, where a local option by-law has been carried in some village or other municipality, license to sell strong drink is taken away from the hotel-keeper, he ceases to keep hotel, being unable to make it pay without the revenue he gets from selling spirituous or malt liquors.

It is stated that, by reason of local option by-laws, 159 hotels will, by the 1st of May, either be closed or conducted without any compulsory attention to the interests of the travelling public, many of them in localities which have no other accommodation for travellers. This will mean a very serious loss and inconvenience, not only to commercial travellers; but to drovers, grain buyers, peddlers, insurance agents, inspectors of loan companies and other business men, besides uncommercial travellers, persons travelling through the country for pleasure or on their own affairs. These are classes of the community of whom the well-meaning temperance people never thought when carrying on a crusade against the "accursed rumseller." But if the usual hostelry of a place be closed because its license is taken away, is there no obligation upon any one to provide something to take its place? From experience, we know that what are called temperance houses in the country are comfortless places, as a rule. But it is possible to make a temperance house habitable to the tired traveller, and well-conducted temperance houses there should be if the people of a locality do not approve the other kind.

Complaint is made that in those municipalities which have carried a local option by-law, accommodation for board, lodging, sanitary conveniences, etc., has been taken away from travellers, with no apparent responsibility upon either the Government or municipality to supply it. Now the Travellers' Club points out as follows:—

> Under the License Act there is Government regulation and supervision not only of the sale of liquors, but of the accommodation necessary for the travelling public, both as to meals, rooms, sanitation, security for property, board and lodging for horses, etc. The Travellers' Associations have asked the Government to make an amendment to the local option clauses of the License Act so as to oblige any municipality which chooses to do away with licenses under the Act to provide for the accommodation which the public are being deprived of as a natural consequence of the taking away of hotel licenses. There is no doubt as to the power of the Government to do this. The License Act grants privileges to a hotel-keeper under certain specified conditions and obligations which he must assume in order to get a license, and which are for the comfort and convenience of the travellers. The same Act gives a municipality the privilege, by voting, of passing a by-law which withdraws that municipality from the provisions of the License Act and imposes no conditions or restrictions upon exercising the option.

There is, as we have said, reason in the claim that if a traveller's accustomed comforts are cut off by reason of a local option measure, means should be taken to restore them, in part at least. And the request made of the Government above is entirely rational. We feel that there are many honest advocates of a local option by-law to prevent the sale of intoxicating drink who will see the fairness of some such provision, and will be willing to pay for it. For the *intemperate* temperance men, however, some of them, we have very little sympathy. Their humanitarianism is of the one-sided and bitter kind. Not a copper cent will they pay (unless obliged to), to provide reasonable lodging for a man who prefers a glass of beer at his dinner to corn-cob coffee or boiled Japan tea. Such a man, they conceive in their unchristian narrowness, must be destined for a warm hereafter. On Saturday, the 10th instant, the Club passed the following resolution:—

> In order to practically demonstrate that public houses are a necessity for the travelling public in the smaller towns and villages of Ontario this club will assume the entire expense of a representative of any temperance association in Canada who will accompany one of our travelling men on his regular weekly business trip; or if all the different temperance associations desire to participate, this club will assume one-half the entire expense of one representative from not more than six different temperance associations to go through six districts with six of our active travelling men.

* * *

WESTERN DEVELOPMENT.

The movement into the Canadian North-West is gaining fresh impetus each year, and Sunny Alberta appears to be strictly in the running for a large share of the influx. One day a week or two ago—on March 9th, as a matter of fact,—a remarkable scene was witnessed in Calgary. It was the arrival of the vanguard of the American spring invasion, in the shape of three crowded trains of seven to eleven cars each. It was the most remarkable movement of settlers ever recorded in that city of new arrivals. Calgary and its enterprising business men gathered in groups to welcome the new-comers. An important feature of the circumstance was the substantial character of the settlers. Three men alone, we are told, deposited in one bank the sum of $35,000, for investment in farming lands. Not only this, but the party or series of parties were composed of men accustomed to farming on a large scale in Indian Territory and Oklahoma, Kansas, Arkansas, Missouri, or other parts of the United States of a character more or less similar to the North-West. This influx is only an index of what is going on in Calgary and at other points in the Canadian West all the time. On this particular day the new arrivals at that distributing point numbered somewhere between 1,200 and 1,500, but the aggregate of smaller parties and of individual groups and families must be simply enormous. And, it is only just beginning for the current year!

Saskatchewan, the new Province with the "name," as some of our American friends half-derisively call it, is also attracting thousands of new settlers, and many of them are drawn from the ranks of their best. Almost every despatch or letter that comes from various points contained in that great area refers to land being taken up by new arrivals. One for instance, dated Maple Creek, Sask., 8th March, says:—"Settlers are now coming into this district at a very rapid rate, making everything along business lines move a little." And other districts have the same story to tell.

REINFORCED CONCRETE IN BUILDING.

Builder, Montreal, asks where he can obtain the fullest particulars as to the Hennebique system of fire-resisting construction, which he says: "I have been told is greatly in use in the United States, and was invented there." We are unable to inform our correspondent directly in answer to his question, but it occurs to us that he may learn about it by applying to the builders of the Ottawa new Roman Catholic College, which is, we understand, building on that system of reinforced concrete. As to its being invented in the United States, we are by no means so sure of that, although Americans have patented the Columbia, the Roebling, and possibly one or two more similar systems. We think it more likely to be French or Swiss. The "Engineering Times," of London, England, declares its belief in the statement of E. Probst, of Vienna, who said last year that no other branch of engineering work has progressed as much as reinforced concrete construction in the last few years.

In a supplement to that journal, dated 1st March, we find an article devoted to the subject of reinforced concrete in Europe. This relates how that substance was used by a Belgian architect to obtain a fire-proof building, some ten or a dozen years ago. He had had a bad experience of a fire in a factory, which proved to him that iron must be enveloped in some material which could protect it from the influence of fire, and so reinforced concrete was first introduced for fire-proof purposes. In France, Considère made a discovery which caused quite a stir at the time, and it was that reinforced concrete could expand ten or twenty times as much as the concrete of the same composition without any iron. Experience has shown that the iron embedded in the concrete does not rust. In 1892, Wayss & Freytag, who are well-known Austrian and German contractors, built in a small city the whole water-pipe system of reinforced concrete; a few months ago they examined the pipes, and found that after eleven years' service everything was quite satisfactory. In Paris, where reinforced concrete pipes are freely used, it has been found 20 per cent. cheaper than masonry work. At Hamburg, there is a six-storeyed factory built of reinforced concrete with the front columns covered by sandstone.

It is important to observe what is said of Europe's experiences of such methods, coming into vogue as they are on this side the Atlantic. Ten years ago a stairway was built of this material in Stettin, Germany, and after erection with a load of 100 lbs. per square foot did not show any cracks. The tomb of the Empress Frederick at Potsdam is covered with a cupola of reinforced concrete on the Monier system. At the London Exposition fire in 1903 the Visintini beam stood fire tests, while the Siegwart beams successfully withstood the fire in New York, where a temperature of 1,800 degs. F. was registered. Visintini appears to be one of the latest to present a system with some especial features. Among the numerous patented systems, those most familiar in England are the Ransome, Kahn, Thatcher, Hennebique, De Valliere, Cummings, Johnson, Columbian, Expanded Metal, Roebling, International, Unit, Visintini, etc.

These may be divided into five classes: (1) Those using "deformed" bars; (2) those using plain bars; (3) those using a "webbing"; (4) those using a "frame"; and those in which the parts are moulded in advance and then set in position.

Upon enquiry of the editor of "The Canadian Engineer" as to our correspondent's query, Mr. Groves hands us the March issue of "Concrete and Constructional Engineering," published in London, containing a paper on the preservation of iron and steel, written by B. H. Thwaite, C.E. Our correspondent might procure this magazine, which is the latest and one of the best authorities on the subject which its title indicates.

IMPORTANCE TO ONTARIO OF HUDSON BAY.

The present article is the sixth of a series, begun in these pages on the 16th February, devoted to considering: Why Ontario lacks commercial access to Hudson Bay. How such access can best be obtained. What Provincial advantages will result from up-to-date transit facilities extending to the great Canadian sea via Ontario. Our readers will probably agree that some light on these questions has been afforded by the information here furnished. Indeed, we have had evidence from week to week of awakened interest in Hudson Bay from a novel standpoint. And if any one has not preserved his copies of the paper, and would like to have the article in a compact form, we have some copies of a pamphlet containing them, which we will be pleased to forward. In this pamphlet are maps of Hudson Bay and the Great Lakes of America, and of what is probably the best area for supply of sea food in the world, namely, that part of the United States lying next south of the Great Lakes, this side the Rocky Mountains, and south-westward from Ottawa River to Omaha.

Foregoing articles, in discussing the third of these queries, as to Provincial advantages, have shown how Ontario may be enabled to take the lead of the other provinces in fishery industries, how a considerable addition can be made to her industrial population, how the railway route here proposed, from the Albany River to Lake Superior, will be a most important colonization road, and how access to the sea-food resources of Hudson Bay will reduce the price of fish to Ontario house-keepers. We now contend:—

6. Immense commercial and financial benefits to result from early access to Hudson Bay Sea Food Resources.

Within two years after the new route is open, and refrigerator cars can take fish from a tide water Ontario seaport to Chicago, or other centres of demand, within forty-eight hours, a supply of 1,000 tons a day for 7 1-2 months (April 15th to December 1st), or 225 days, can be safely estimated as a minimum delivery, with an average value in Ontario of four cents per pound, or $80 per ton. This will amount to eighteen millions of dollars net cash received in Ontario, giving employment to thousands of fishermen, who, with their families will have their main headquarters in Ontario, and expend their earnings there. Millions will be paid to Provincial farmers for agricultural supplies, and millions to merchants and manufacturers for goods to make northern life comfortable.

That millions in capital invested in fishing vessels, both sail and steam, in fishing stations and outfits, will be required before these results can be obtained in full measure, goes without saying, but that these facilities will follow commercial access and proofs of profitable investment is equally certain.

In view of the foregoing facts and precedents it is quite safe to estimate the loss to the industries and commerce of Ontario at five millions of dollars for each year that commercial access to the fisheries of Hudson Bay is delayed.

A decade or two later may witness the sea-food product nearing the million tons' mark annually, with eighty millions of dollars proportionately dispensed therefor.

Then "The Empire State" will divide titular honors with its northerly neighbor as being equally entitled to be known as "The Empire Province."

EDGAR A. WILLS.

62 Church Street,
Toronto, February 9th, 1906.

The following from a Montreal leading journal indicates outside views of the situation:—

The Montreal "Daily Star."

To the Editor of the Montreal "Star:"

Sir,—As a Canadian, born in the good old Province of Quebec, but for many years a resident of the United States, having mining interests in Minnesota near the Canadian line, I am seeking information.

Why is it the case, while Canada has nearly in its centre the largest inland sea on this continent, known as Hudson Bay, there is no means of access to it from the Great Lakes and rivers of the St. Lawrence Basin, except by canoe routes along rivers, and only in the summer season? There is not a road or even a winter trail, as I am informed, to those shores from the settlements of either Quebec or Ontario.

I had supposed a route was being rapidly opened from the Canadian "Soo," but when there to attend the semi-centennial celebration of the opening of the first canal alongside the falls of St. Mary's River, I learned a railway had been commenced there some five years ago, ostensibly to go to Hudson Bay, but which has not yet reached half way to the Canadian Pacific Railway's main line, and has been deflected westward, to accommodate mining interests, and the plan of extending it northward to Hudson Bay has been practically abandoned.

Said an American engineer, whom I met at the Soo, in discussing the subject: "If the State of New York or any of the Lake States, as they are called, which extend into the St. Lawrence Basin, had control of the section of territory situated between the Lakes and Hudson Bay, there would have been a railway to those shores at least twenty-five years ago, and the sea food industry would have rendered it a paying investment within one-third of that time, and would now be bringing more money into Central Canada than any one of the exports now relied upon. I own great chagrin at having such an imputation cast upon Canadian enterprise, without having any defence to make that seems adequate. Can you help me out of this dilemma?

A CANADIAN-AMERICAN.

The foregoing communication expresses itself quite clearly. The question propounded: Why Canadian enterprise has not opened up commercial access to the greatest sea of North America, which is less than three hundred miles distant from the Great Lakes, is, indeed, a difficult one to answer. Quebec Province can be charged with delinquency only in part, however, owing to its geographical position. While its boundaries touch Hudson Bay and its railway to Lake St. John extends to within three hundred miles of the great sea, yet the inducements to span the intervening spaces are far less than those which exist in Ontario. To bring the sea food of the northern sea to Quebec would be like carrying coals to Newcastle, as the nearer waters of the Gulf of St. Lawrence and of the Ocean afford an abundant and cheaper supply. But when the position of Ontario is considered, that fact referred to by our correspondent is made to appear more striking. A great market for sea food is to be found in that section of the Union known as the "Prairie States," including a part of Ohio, of Michigan and Wisconsin. Thirty millions of inhabitants are here found in the United States who have to depend for sea food on outside supplies. Most of them can afford to pay liberal prices. Their wealth is above the average of the continent. The fisheries of the Great Lakes are not adequate. Prices have doubled within the last ten years. A fact not generally known, is that the markets of Cleveland and other lake cities have relied largely upon the recent supply obtainable from Lake Winnipeg, in Manitoba. But this source of supply, like that more Eastern, is becoming materially diminished. Apart altogether from the possibilities of traffic along the route of the railway, the fisheries of Hudson Bay would materially contribute to the cost of a railway running to its shores.

CANADA'S MINERAL PRODUCTION IN 1905.

The summary of the mineral production of Canada for the year 1905, compiled by the Section of Mines of the Geographical Survey of Canada, is now to hand, and, though it is subject to revision, gives an approximately accurate idea of the rate of progress of this great and growing Canadian industry. Briefly stated, it shows that the Dominion produced last year mineral wealth to the value of over sixty-eight and a half million dollars, an approximate increase of eight and a half millions, or about 14 per cent. over the previous year, in spite of a marked falling off in the output of gold from the Yukon. Leaving the latter for the moment out of the reckoning, the general mining industry of the rest of the provinces shows an increase in value of output for the year 1905 of nearly $11,000,000.

The following table shows the production of minerals last year in detail.

Metallic.

Product.		Quantity.	Value.
Copper	Lbs.	47,597,502	$ 7,420,451

Estimated value of mineral products not returned		300,000
Total, 1905		68,574,707
Total, 1904		60,073,897

We are told in some further memoranda in this bulletin that the gold-producing industries of all the provinces (except the Yukon as stated), show an encouraging increase. In Nova Scotia there was a slight recovery from the general decrease in production apparent for the last few years. In Ontario, activity was evident in prospecting and developing at numerous points both in the old districts in the eastern parts of the province, and in the newer gold-bearing districts west of Thunder Bay. Of the silver, British Columbia furnished 90 per cent. of last year's yield. The Temiskaming district of Ontario, which contains Cobalt, has made remarkable strides. In the production of copper, British Columbia still retains the pre-eminence. In 1904, that province was credited with over 80 per cent. of the whole, and although still maintaining a very long lead, increased production both in Ontario and Quebec have considerably reduced that held by the western province. The mining of lead, under the spur of the Government bounty, has made great progress. The total amount of bounty paid on iron and steel by the Dominion Government during the calendar year 1905 was $1,900,206. Although the production of pig-iron from Canadian ores only does not, we are told, show a very large growth, the industry as a whole shows large proportional advancement, and new furnaces at several points are contemplated or in course of construction. With the new iron ore districts more recently brought to light and the greater accessibility of many discovered in past years, the home ore mining industry promises to take a far more prominent and fitting position.

"The production of natural rock cement which in 1904 had decreased to 56,814 barrels, valued at $50,247, fell off in 1905 to the comparatively small amount of 14,184 barrels, valued at $10,274. This was made by three firms in Ontario. The production of Portland cement, however, continues to increase steadily. Thirteen companies were operating plants during 1905 with a total daily capacity of about 8,000 barrels, viz.; One in Nova Scotia, two in Quebec, nine in Ontario, and one in British Columbia, while another in Ontario was engaged in reconstruction work."

* * *

FARM PRODUCTS.

Cheese is a very strong feature in the provision trade, and the high prices which have marked it for such a long period, in fact all through the past season, bid fair to continue. It is calculated by dealers that there cannot now be much more than 5,000 or 6,000 boxes of cheese in the country, though in this connection it may be said that complaints are quite frequent on the score of underestimating the holdings in Montreal. Whatever may be the actual number of cases, however, no doubt exists as to there being a distinct shortage. In Great Britain, too, stocks of cheese are at a low ebb, and a despatch early this week stated that another advance of 1s. had been made. The demand for finest Canadian at 64s. 6d. to 66s. 6d., was very brisk. Wholesale prices in Toronto range from 14 to 14 1-4c. Interest is beginning to be taken in fodder cheese, the heavy production of which, of course, depends largely on the weather. Farmers are usually advised to "go very light" in this direction, but with prices so high, and with such an advancing tendency, it is scarcely likely that with favorable conditions they will restrain themselves very much.

A scarcity of really prime butters exists on the Toronto, and various other markets, and prices for such are extremely firm. Supplies of ordinary grades are about normal, or this week, perhaps, a little under. In England the demand for butter is a strong one, but prices in the home market are so good that there is no opening in the Old Country for Canadian-made, and dealers are devoting their attention to Danish and Irish. A late despatch from London states there is now a weaker tone to the demand for butter, and that practically not a tub of Canadian is to be heard of.

---

*The total production of pig iron in Canada in 1905 from Canadian and imported ores amounted to 527,932 short tons valued at $6,492,972, of which it is estimated 70,554 tons, valued at $1,047,860 should be attributed to Canadian ore and 457,378 short tons valued at $5,445,112 to the ore imported.

Hog products are high-priced, and lard is especially firm, having made a 1-2c. rise again this week. Supplies of hogs both in Ontario and Quebec are much below requirements, and the result is that farmers are rushing forward hogs which are not over well finished, in order to take advantage of the high prices. The result of this policy is a fractional decline in price, though good animals are badly wanted. The Province of Quebec, which is particularly well adapted to the rearing of hogs, is about to make special efforts to foster the industry, and to supply the British market. The Government, we understand, has collected a considerable number of boars and sows of the desirable breeds, and will sell them by auction at central farming points in the Province. These improved grades, it is hoped, will result in the establishment of nuclei from which new and good methods will spread, thus assisting a very important branch of Canadian agriculture. We note in a report by P. B. MacNamara, Dominion Commercial Agent in Manchester, that the English provision trade looks with general approval on the action of our Government in prohibiting the importation of American hogs into Canada, and thus rendering more difficult the substitution of the United States bacon for Canadian, which is its superior.

* * *

WESTERN POPULATION CLUBS.

If only Torontonians had the strong local patriotism of their civic brothers in the Far West, the task of Mr. Byron E. Walker, Mr. Hynes, and other disinterested citizens for the improvement of the city, the beautification of streets and parks, would be easier than it is now. In British Columbia the people have been seized with quite a disposition to form "population clubs," if they may be so called. For example, in Nelson, prominent citizens have joined together in a Twenty-Thousand Club. That is to say, this is to be the population of the city which they intend working to secure in the immediate future. With that number attained, no doubt they will then put the number up to 50,000, and so on. There is nothing like definite aim, something tangible to work for. The advertising committee of the club has its hands full with schemes for lantern lectures, advertising in eastern and other papers, writing magazine articles, and so forth. In Vancouver, too, the same idea has taken root, only on a more extensive scale in keeping with that city's present larger proportions.

The Tourist Association has come to the conclusion that it is time for a wider field to be covered, and so that body has asked for the co-operation of all sections in more fully exploiting the natural resources of the province. In future it will not only act as a Tourist Association as of old, but will be a sort of Provincial Bureau of Information. In addition, some of the prominent business men of the city are organizing a "Hundred Thousand" Club. The actual attainment of this high-water mark in population would not appear to be such a colossal undertaking for a city that has already taken such strides as Vancouver has, especially during the last three or four years. We wish it and its sister cities and towns of British Columbia full success.

LOAN COMPANY METHODS.

To protect ignorant folk from wasting or unduly risking their money in schemes which better instructed people avoid, many plans have been suggested. But when to ignorance is added greed for "big interest" on small savings, it is not easy to keep men and women from taking a risk. There have been many instances of this. Unprincipled managers and smooth-tongued agents can usually persuade a person who wishes to get the big interest they offer, even against the advice of experienced men. A communication reaches us from one who had read our article of last week on the York County Loan Co. This gentleman suggests that the Government might do more than it does to protect farm-hands and servant girls from harpies like Joseph Phillips—"that long-haired apostle, whose adventures in Britain and in Iowa before he brought his equivocal methods to Canada would form the basis of a novel." But our correspondent does not outline any plan for the purpose. It was said editorially in the "Monetary Times," of 12th January, in an article on Loan Companies and Deposits:—

> What is needed in addition to having laws on the statute book about loan companies, is the prompt administration of those laws, and the restriction of charters so that only men of known character and ability shall be allowed to conduct companies which take the money of the people.

* * *

LIFE ASSURANCE.

Editor Monetary Times:

Sir,—In a recent issue of your paper you print an article on "Life Assurance," which was prepared by Mr. W. S. Andrews. There are so many articles appearing in various papers that it is quite impossible to reply to many of them, but owing to the prominence Mr. Andrews has attained, through his connection with the Ontario Government in the present insurance investigation, it seems hardly right that his article should be allowed to pass unnoticed.

The daily press has referred to Mr. Andrews as an "expert actuary and accountant." I am not acquainted with Mr. Andrews, but I have heard that he is an expert accountant. I do not think Mr. Andrews himself ever claimed to be an actuary, and the article he prepared is an evidence of how easy it is for one, who may be an expert at another line of business, to entirely overlook points in connection with life insurance which would be at once apparent to an actuary or an actuarial student.

Mr. Andrews refers to the calculation of the premiums and seems to infer that the net premium is practically unchangeable. This is only partially true. While there is not a great difference between the net premiums calculated by different standard mortality tables on the same interest basis, there is a great difference between net premiums calculated by any one mortality table using different rates of interest. When a company holds a 3 1-2 per cent. reserve on business issued at a premium based on a 4 1-2 per cent. rate of interest, it will readily be seen by any insurance man that the net premium will be very materially increased and consequently the loading for expenses seriously decreased. This deficiency is made up by the profit from interest, arising from the interest earned in excess of 3 1-2 per cent., instead of that in excess of 4 1-2 per cent. only. This shows how impossible it is in many cases to make any comparison between expenses and loading without considering other features of the business.

The principal part of Mr. Andrews' article refers to expenses and he first shows for the years 1901 and 1904 the ratio of expense to premium income of Canadian, British, and American companies. Now this table tells nothing. A moment's consideration will show anyone that the ratio of expenses to premiums for new business largely exceeds that for old business. This being so, it would naturally follow that the companies writing the largest percentage of new business compared with old, will have the largest percentage of expenses to premiums over the total business, if the percentages of expense for new and old are exactly alike for all concerned. I took the trouble to show this in a paper I read before the Insurance Institute of Toronto over a year ago, as follows:

Suppose there are three companies, doing business with expenses equal to 100 per cent. of new premiums and 10 per cent. of renewal premiums, each receiving $1,000,000 a year in new premiums, but having different amounts of old business on the books. The expense ratio works out as shown:

Particulars	Company A.	Company B.	Company C.
New Premium Income	.$1,000,000	$ 1,000,000	$ 1,000,000
Renewal premium "	.. 5,000,000	11,000,000	29,000,000
Total premium income	.$6,000,000	12,000,000	30,000,000
New business expenses	$1,000,000	1,000,000	1,000,000
Renewal business "	.. 500,000	1,100,000	2,900,000
Total expenses	........$1,500,000	$2,100,000	$3,900,000
Ratio of expenses to premium income	25%	17½%	13%

This table shows that a comparison of total expenses to total premiums gives absolutely fallacious results unless each company is receiving the same proportion of new to total premiums.

Now, what do we find in the case of the Canadian, British and American companies?

In Canada we have a young and rapidly growing country with many young and progressive companies keenly striving for new business in competition with the immense companies of the United States. The Canadian companies are holding their own and are collectively writing a large volume of new business as compared with their total business. Furthermore, several of the Canadian companies have not as yet got beyond the stage when they must pay out a considerable sum in organization expenses.

According to the last insurance Blue Book, there are 14 British life companies doing business in Canada. The average of these companies on the 31st December, 1904, was 77 years, which is considerably more than the age of the oldest Canadian company. The youngest British company shown was 42 years and the oldest 184 years in existence. This, coupled with the well-known fact that the new business written by British companies bears a small ratio to their total business, explains the small percentage of total expenses to total income shown by Mr. Andrews.

The American companies shown are those companies which have been established for many years in their own country before entering Canada, and although they are progressive and write an immense volume of new business, this does not bear the same proportion to the total business as in the case of many of the young Canadian companies. A comparison with companies in the United States writing a similar proportion and volume of business to that of the Canadian companies would show a very different ratio from that shown by Mr. Andrews.

Dividends to shareholders are treated as an expense by Mr. Andrews. He evidently overlooked the fact that the paid up capital is invested and earns a large part of the dividends paid to shareholders.

The paid up capital stock of the Canadian companies according to the last Blue Book was $3,843,706.64. The dividends to shareholders amounted to $217,719.03, so that the rate of dividend for all companies was a little over 5½ per cent. The average interest rate earned by the Canadian companies was 4.8 per cent. so that the amount of dividends in excess of the interest earnings of the paid up capital is a small matter.

From what has been said in regard to the relative proportions of new and old business, it will be seen that what Mr. Andrews says in reference to the "load necessary," (that is, the loading necessary) to cover the expenses is almost meaningless. Although the first year's expense is heavy, there is no reason for the expenses of subsequent years of the policy being so. Each policy must stand on its own basis in regard to expense. If a company is writing a relatively large new business, it is only to be expected that the loading will be less than the expenses, on account of the heavy expenses of the first year. The loading in the second and subsequent premiums will be sufficient to cover the expense of the second and subsequent years of each policy and gradually wipe out the excess in the expense of the first year.

I do not wish this letter to appear as an attempt to justify the present expenses of getting business, but as a protest against the use of meaningless ratios. It is as much, if not more, in the interest of the shareholders, as of the policy-holders, to reduce the expense of the business, but although there are plenty of voluntary critics, there has yet been no one who has suggested any practical way of conducting the business successfully at a lower cost. The shareholders and policy-holders can well afford to pay a very handsome salary to the man who can solve this problem.

Yours truly,
PERCY C. H. PAPPS,
Toronto, March 19th, 1906. Actuary.

* * *

DRY GOODS NOTES.

Gordon, Mackay & Company, Limited, the well-known Toronto dry goods house, have been authorized to increase their capital stock from $750,000 to $1,500,000.

A despatch from Brandon, Man., states that B. N. Fraser's woolen mills there have been sold to Messrs. R. Kerr and R. Sword for $13,000. The probabilities are, however, not for a speedy re-opening of the works, but that they will be re-sold.

The business of E. J. Dignum & Co., wholesale dealers in woolens, dry goods, and tailors' trimmings, Toronto, is to be taken over by a joint stock company under the name of E. J. Dignum & Company, Limited, with an authorized capital of $100,000.

"Fashion Craft Mfrs., Limited" is the name of a new company just chartered by the Dominion Government for the purpose of manufacturing and dealing in clothing, head and foot wear, fabrics, machinery for making the same, etc.; also of acting as commission agents, etc. The capital stock mentioned is $250,000. J. A. Richard and H. Vosberg, of Montreal, are charter members. Head place of business will be Montreal.

* * *

FOR GROCERS AND PROVISION DEALERS.

Mr. D. M. McPherson, of Montreal, has invented a machine for paraffining cheese, thus rendering it water-tight, giving it a bright and glossy appearance and preventing the formation of mould and shrinkage of weight.

To the great regret of all who knew him, Mr. Frederick W. Fearman passed away in Hamilton after a desultory illness of a long time. He was born in the county of Norfolk, England, in 1825, and came to Canada with his family in 1833. In early life he sailed on the Great Lakes, but in 1854 entered the provision business and laid the foundation of the great pork-packing business which for so many years has borne his name, and which during the last few years has been carried on by his sons.

The Canadian Dairy Supply Company, Limited, has a Dominion charter to take over the business now carried on in Montreal under a similar name, and to manufacture and sell outfits for cheese and butter factories and general dairy and farmers' supplies, to deal in centrifugal butter-making machinery, etc., and implements and dairy utensils. Joseph Ward, J. S. Clunie and others, of Montreal, are interested

Another company recently incorporated with a capital stock of $250,000 is Jas. Alexander, Limited, in which D. C. Alexander, steamship agent, of Montreal, is the prominent figure. It will buy, sell and deal in butter, cheese, provisions, grains, and other agricultural products, and carry on business as steamship, freight and produce agents.

The salmon canners of British Columbia are already preparing for fishing operations during the coming season. The steamers on the several northern routes are loaded up with supplies required for repairs and improvements.

A Montreal produce firm, the D. & A. McPherson Company, achieved a few days ago what is considered a remarkable shipping feat. It consisted in sending off no less than nine car loads, or 4,500 boxes, of cheese by the "Fremona," which left New York on the Saturday morning, they having received the order by cable only on the previous Thursday afternoon. By dint of working overtime and a hard struggle, they succeeded in getting the merchandise safely on board.

It is estimated that there are probably 30,000 bushels of beans held by large shippers in Western Ontario, but that there are in the neighborhood of 20,000 bushels held by the farmers of Oxford township, the same by both Howard and Harwich townships, while Aldborough has 10,000 and Dunwich 5,000, making a total of 75,000 held by the farmers, besides what is held by the local dealers, which is put at 25,000 bushels, or a total of 100,000 bushels in all. Prices in Toronto and Montreal markets are steady to firm, though reports from New York speak of some pressure to sell.

* * *

—The civic elections at Fredericton last week resulted in the defeat of the most representative and most progressive men at the council board of that New Brunswick city. They met their Waterloo because of a proposed new sewerage system. Assuredly it is the irony of fate that their successors should now admit that the plan these men proposed, and which they (the victors) condemned, was the right plan. Immediately on getting the reins of power the new board sent for the engineer, intending to have him make the changes they had won upon. He, however, convinced the new men that the old plan was best, and they accepted his view.

* * *

—The Maritime Coal and Railway Company of Cumberland, N.S., has a project for establishing an electric power plant at the mouth of the company's mines from which power will be transmitted by wire to Amherst and several other towns in Nova Scotia. The idea being based on Edison's dictum that "It is preposterous to put coal mines on wheels. . . . We can ship 100,000 horse-power over a wire quicker and more economically than its equivalent in coal over a railroad track." The general plan to be followed will be that employed at a similar undertaking at the Outwood mine in Lancashire, where there are four 2,000 kilowatt turbine generators, each delivering 500-cycle, three-phase current directly at 10,000 volts. The president of the above-named company is Senator Wm. Mitchell.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ending with Thursday, March 22nd, 1906, as compared with those of the previous week:—

	March 22nd.	March 15th.
Montreal	$26,276,917	$25,658,894
Toronto	20,247,635	22,205,105
Winnipeg	6,981,535	6,385,663
Halifax	1,613,488	1,372,160
Hamilton	1,195,157	1,298,546
St. John	877,841	976,988
Vancouver	2,107,003	1,944,938
Victoria	911,436	980,059
Quebec	1,516,422	1,486,347
Ottawa	2,429,565	2,347,563
London	907,280	931,065
Total	$65,064,279	$65,587,328

FACTS ABOUT JAPAN.

We find some recent facts about Japan in the journal of the Tokio Chamber of Commerce just received: As is generally well-known the late war was responsible for a big increase in the number of steamers passing under Japanese control. According to statistics the total number of steamers owned by Japanese at the end of 1903 was 1,088, with an aggregate tonnage of 657,269. This was increased at the end of December last to 1,365 steamers, with an aggregate tonnage of 926,285, thus showing an increase of 277 ships and an aggregate tonnage of 269,016.

According to investigations completed by the Department of Finance of that Empire, the number of banks throughout Japan at the end of November was 2,255. Their combined capital reached 530,880,819 yen. A yen nearly equals a dollar.

It is said that the Japanese Army intends to cast medals out of the metal of the field guns captured from the Russians in the last war, for the soldiers who followed the expeditionary forces. After the 1894-5 war a medal of the kind was cast and 53 field guns captured from China were converted into 400,000 medals. As over 1,500,000 medals are required in the present case, about 200 prize guns must be appropriated for the purpose.

LIFE ASSURANCE IN FRANCE.

Life assurance is making progress in France. A compilation made last month by *L'Agent d'Assurances*, a Paris journal, shows that all but three of sixteen companies whose figures are given made gains in new business during 1905 over 1904. The annexed table shows what their total new risks written amounted to. Besides the nine companies named in the list there were seven others which wrote lesser amounts, viz.: Le Monde, L'Aigle, La Confiance, Le Patrimoine, La Foncière, Le Nord, La Providence, whose aggregate is 53,704,979 francs, which is equal to $10,700,000 nearly::—

New Assurances.

Companies.	1904. fr.	1905. fr.
Cie d'Assurance générales	65.113.387	68.000.000
L'Union	33.561.163	34.500.000
La Nationale	67.047.691	70.054.456
Le Phénix	51.621.520	55.700.000
La Caisse Paternelle	12.946.445	12.969.196
L'Urbaine	48.978.143	49.773.553
Le Soleil	12.039.078	12.300.000
L'Abèille	16.518.854	18.012.000
La France	17.122.987	17.035.417
Other companies	53.704.979	55.114.635
Totaux	378.654.247	393.459.257

These totals are, approximately, $75,000,000 for 1904 and $78,000,000 for 1905, the gain in the latter year being, say $3,000,000. The claims of the two years in the case of all the sixteen companies amounted to 54,463,100 francs (say $10,500,000), in 1904 and 55,853,702 (say $11,500,000) in 1905. Nine of the companies show a decrease in claims and seven an increase. The greatest increase is in the case of La Nationale, while noteworthy decreases are shown by L'Union and La Foncière.

ANNUAL FINANCIAL REVIEW.

The issue for March 1906 of this now familiar publication is just to hand in the shape of an appendix to Volume V. It is entitled by its publisher, Mr. W. R. Houston, "a carefully revised précis of facts regarding Canadian securities;" and so far as we have been able to discover in a necessarily brief survey it has been carefully revised. Such a compound of facts and figures, names and dates, comparisons and percentages—it contains 306 pages, apart altogether from advertisements, with reviews of 118 banks and other corporations—involves enormous labor and requires not only expert knowledge but clear and level heads in its compilation. There are in its pages condensed statements of 18 banks, 13 insurance companies, 19 land, loan, and mortgage companies, 18 street railways (in Canada and the United States), trust companies, mining companies, navigation companies, industrial concerns; their balance sheets, condensations of their affairs and the names of their directors. To all this is added tables showing approximate yield of stocks and bonds, etc., and lists of members of the Montreal and Toronto Stock Exchanges. For investors or for bankers and sharebrokers it is a valuable publication.

* * *

CHARTERED ACCOUNTANTS OF NOVA SCOTIA.

Some six years ago, a group of enterprising people in Halifax exerted themselves to found and have incorporated the Institute of Chartered Accountants of Nova Scotia. That body held its sixth annual meeting on the 6th March, on which occasion, owing to the death of the president and absence of the vice-president, R. A. McIntyre, Mr. E. Kaulbach occupied the chair.

The council's report noted with much regret the death of President S. S. Scott, who had been president since the incorporation of the institute and one of its most faithful and energetic workers. The demand for expert accountants has largely increased, and the membership had enjoyed a large patronage. Many enquiries regarding the necessary term of experience and qualifications for admission had been received. It was stated that R. Carter, of Royal Securities Company, and J. Godfrey Artz had passed the final examinations, the degree of Chartered Accountant being conferred on each. The following had passed the intermediate examinations:—J. Percival Atherton, Amherst; E. S. N. Eaton, B.A., Charlottetown; Chas. H. Glendinning, New Glasgow; Percy L. McNeill, Montreal; Vernon A. Parrish, Kingston; Fred. B. Schurman, Truro. Officers were elected for the current year as follows:—President, R. A. McIntyre; vice-president, W. E. Leverman; secretary, E. Kaulbach; treasurer, G. G. Dustan. The council for the year includes above officers and also A. Allan, J. G. Artz, R. Carter and R. Schurman.

* * *

CHARTERED ACCOUNTANTS' ASSOCIATION OF MANITOBA.

We have seen the announcement for 1906 of this body, which intends to hold its annual intermediate and final examinations on the 29th, 30th and 31st of May. Applications from those intending to take either will be received by the secretary up to the 16th of that month. The examinations will be held in the city of Winnipeg, but the council may arrange for non-residents to write at their place of residence.

The subjects for the intermediate examination will embrace the following:—Bookkeeping in all its branches; Bills of Exchange Act; the Joint Stock Companies' Act; partnerships—the different kinds and the relation of partners to each other and the public; general office knowledge.

The subjects for the final examination will embrace the following:—Auditing; advanced bookkeeping and accounts; executors' duties and accounts; joint stock and partnership accounts; general commercial law. Only those who have passed their intermediate examinations, either there or with sister institutes, will be eligible for the final. All applications must be on the official form, copy of which will be supplied by the secretary on application. His name is W. A. Henderson, P. O. Box 409, Winnipeg.

Elsewhere will be found noted some proceedings of the annual meeting of the Nova Scotia Institute of Chartered Accountants. We understand that the Ontario and Nova Scotia institutes and the Manitoba Association are being conducted along parallel lines, and have uniform standards. This being the case, we have sufficient knowledge of the methods of the Ontario Institute to be satisfied that a member or associate of either must be respectable and well qualified.

* * *

FIRE INSURANCE NOTES.

On Friday last the directors of the International Association of Fire Engineers of America met in Paterson, N. J. The meeting was called to prepare for the annual convention on October 9th to 12th, in Dallas, Texas. The principal discussion at the convention will concern the fighting of fires in small towns of from five to twenty thousand population.

Wherever the councils of towns and villages see fit to put in the pruning-hook of economy, it ought not to be in necessary appropriations for protecting any place from fire. The "Liberal," of Portage la Prairie, Man., perceives this, and while urging rigid economy in civic expenditure now because of the free spending of the last two or three years in sidewalks, etc., expressly excepts the waterworks. "One of the most necessary propositions before the council," says that journal, "is to put the waterworks system on a fair basis of operation. This may take a year or so and will require the earnest attention of those in charge." Municipal lighting will probably receive attention another year.

A firemen's tournament is to be held in the charming city of Charlottetown, Prince Edward Island, next summer. A meeting of the tournament committee was held recently, at which it was decided to hold the tournament on Wednesday and Thursday, the first and second days of August. A programme is being arranged. The great athletic contests will be held on the afternoon of the second day. In the evening of that day there will be a torchlight procession to Victoria Park, where a display of fireworks will take place, and the prizes will be distributed to the winners of the athletic events of the afternoon. A band concert on an elaborate scale will also be given. The first day is to be devoted to entertaining the visiting firemen, and a grand parade of the streets held in the afternoon.

Lord Rothschild presided at the meeting of the Alliance Assurance Company, Limited, on the 1st inst., called to submit for the approval of the shareholders resolutions for the transfer to the company of the undertakings of the County Fire Office, Limited, and the Provident Life Office, Limited. The chairman referred to the recent purchase and amalgamation of the Westminster Office and the Alliance Marine Office, and the amalgamation with the Imperial Fire and Life Office some two or three years ago, which had been objected to at the time, but when the figures for 1905 were completely worked out it would be seen that the amalgamation had proved very successful. When they had amalgamated the County and Provident offices their reserves and undivided profits would amount to nearly £4,000,000 sterling. This sum, with a share capital of £1,000,000 sterling, would give £200,000 towards the dividend. The resolutions were agreed to without discussion.

Some Maritime Province journals are questioning the propriety of the Government being its own insurer of federal property against fire. For instance, the Summerside "Journal" asks: "Why is there no system of fire insurance upon Government property? The Government is the custodian of the people's money. It is the people's money that is used by the Department of Public Works to build all the post offices and custom houses and the Parliament buildings at Ottawa. We do not just know where the Public Works Department commences or ends in connection with the I.C.R. stations and workshops, but that a vast amount of the people's money is invested in these buildings we know, and these buildings are uninsured." It cites the losses to Government property that have occurred in the last few years, and adds: "That the Dominion of Canada is rich and can afford to be its own insurer is no argument that the Government should not take steps to safeguard the people's interests along this line." And the Charlottetown "Guardian" says: "The destruction of the Intercolonial workshops at Moncton is a public calamity. Following the destruction in like manner of the workshops of the Prince Edward Island Railway not long ago, the Moncton disaster raises a number of urgent questions as to the caretaking of large and public properties, what watch was kept, what means were at hand for preventing fires, or for giving warning, or for extinguishing a big conflagration. Certain it is that the bad coincidence of two fires destroyed in such brief space the principal workshops of the two Government railway systems calls for a most probing and searching investigation. It also raises the question of the propriety of the Government continuing to be its own insurer, in full or in part, where properties of so great cost and of such urgent and continuous necessity are at stake."

* * *

—New Brunswick governmental authorities are paying more than usual attention to the important lumbering industry these days. Premier Tweedie has already enunciated some proposed changes in policy towards lumbermen, and now Mr. Pugsley, the Attorney-General, outlines a proposal to prevent lumber from being hung up by low water. In a speech a few days ago, he said: "A matter which will engage the attention of the Government is the desirability of taking effective measures to equalize the flow of waters in our rivers, so that our logs can always be got to market. There are now twenty-five million feet of lumber aground in the River St. John, which should have come out last fall, involving a great present loss and much future risk. There are many streams in the upper St. John which might be dammed or otherwise utilized to hold up the water so as to raise the main river when it becomes low. It is our intention to proceed vigorously along these lines, for the Crown, being so deeply interested in our forest wealth, is the proper authority to move in this matter."

* * *

—The gist of Hon. H. R. Emmerson's speech in the House of Commons on a recent day was a more gratifying report concerning the affairs of the Intercolonial for the first half of the current fiscal year, the deficit having been only a trifle over $71,000, as against a million and three-quarters for last year, which, however, was to be accounted for largely by several large increases in expenditure, such as maintenance of way, clearing snow, etc. During the last six months, he added, conditions had improved materially: working expenses had decreased $178,789, and revenue had increased $232,696. And when the reforms now being instituted, such as increases in passenger and freight rates, better co-operation of officials, etc., have had time to have a fuller effect, the improvement will be still more marked. Mr. Emmerson seized the opportunity again to characterize as absurd the reports as to its being the Government's intention either to sell or to place the Intercolonial in charge of a commission.

RIVERDALE DISTRICT.

There is an important district of the city hundreds of acres in extent east of the river Don and north of Queen street which is little known to the majority of the residents of Toronto. And the improvement wrought in that district in the last few years proves an absolute surprise to those who now visit it. Taking the car up Broadview Avenue, the writer found, on a recent afternoon, the scene a picturesque one: to the left a view of the valley of the Don, and block after block on street after street to the eastward occupied by substantial new residences, mostly of brick, with neat gardens and trim boulevarding. There are shops in plenty on Broadview, and the district, now called Riverdale, has several bank agencies. The factories of the district, from whose activity so much of this prosperous growth has arisen, are mostly to the south of Queen street, and along Ashbridge's Bay.

The stirrings of industrial and commercial life in Riverdale have taken definite shape in a meeting of business men a week ago to consider the formation of a board of trade. This meeting was held on Thursday evening, 15th inst., in Dingman's Hall. About a hundred were present. Mr. A. R. Clarke, leather manufacturer, was in the chair, and Mr. H. W. Barker, of the Traders Bank, acted as secretary, and read letters of congratulation from the secretaries of the Toronto Board of Trade and the Canadian Manufacturers' Association, respectively. Controller Jones and Aldermen Chisholm and Church were present.

After a number of brief addresses, Mr. L. S. McMurray, manager of the Riverdale branch of the Bank of Toronto, moved the following resolution:

> Whereas this meeting is of the opinion that the commercial, industrial and general welfare of Riverdale would be enhanced by the formation of an association composed of its business men, property owners and citizens; It is resolved that such an association be hereby formed, and that a committee of 13 be appointed to draft a constitution and complete other details of organization, this committee to report to a general meeting to be summoned by the chairman of such committee.

The resolution was seconded by Mr. Jupp and carried unanimously. The gentlemen whose names follow were chosen as a committee: A. E. Walton. A. R. Clarke, J. Jupp, Inspector Hales, W. H. Allison, T. F. Monypenny, Wm. Williamson, Dr. Sneath, J. M. Hedley, L. S. McMurray, E. S. Reed, S. McCord, Wallace Maclean and R. W. Barker.

It was evident from what various persons said at the meeting that there is a strong feeling in favor of utilizing the east bank of the river Don for factory sites instead of a speedway, improving communication with Riverdale by a bridge across the Don at Wilton Avenue and a new street car route along that avenue and Elliott street, the extension of the car tracks along Gerrard Street and the dredging of Ashbridge's Bay. A resolution was unanimously adopted urging the Toronto Board of Control to take steps towards the building of a spur line steam railway east of the Don along the north shore of Ashbridge's Bay as far as Woodbine Avenue, for the purposes and for the use of present and prospective railways and factories. Meanwhile, as a result of a deputation waiting on the Board of Control on Saturday, asking that the city take steps to put in the aforesaid railway spur east of the Don along Ashbridge's Bay, that board will shortly visit Riverdale and go over the ground with the city engineer. What has been already done illustrates the value of concerted action to a community. It may be confidently expected that the Riverdale Board of Trade will give a good account of itself.

* * *

—We noticed last week that arrangements had been made by R. G. Dun & Co. to open a branch of their mercantile agency in Calgary. We now learn that the Bradstreet Company are also opening there, shortly, a fully equipped branch office.

REGINA'S SINKING FUND.

Some months ago the authorities of Regina resolved to have the books of that municipality audited. For this purpose they engaged Mr. Menzies, an expert chartered accountant, who has reported on the condition of affairs he found to exist. He finds, as we learn from the "Leader," that Regina possesses assets in excess of all liabilities to the amount of $857,194.39, and that so far at least as the year 1905 is concerned the receipts and payments are correct and properly vouched for. But there had been faults in former years, the system of book-keeping at the City Hall has been "faulty and inadequate;" he finds that the books to-day "are not in good order;" that the forms adopted, "while capable of exhibiting the current business correctly have not been adhered to;" and that "the books have not been accurately or even neatly kept." The most disquieting item in the whole report, it seems to us, is the condition in which the auditor found the sinking fund; it was inadequate. Regina has, according to John MacKay & Co.'s "Municipal Debt Statistics," a gross debenture debt of $371,500, and a net debt of $61,710; with a sinking fund of $14,790, as at 21st September, 1905. Mr. Menzies says, on this point: "I have calculated what amount of sinking fund should be now on hand towards the redemption of these four issues of debentures at maturity and I find the fund to be short some $16,854." It is pointed out that last year's council is not responsible for this shortage; it is the result of neglect of councils prior to 1899, and will doubtless be rectified. The incident ought to remind municipal authorities afresh how essential it is for the credit of Canadian towns and cities generally that sinking funds for the redemption of their obligations should never be allowed to fall into arrears. It is one of the points that investors are sure to insist on; and no municipality which values its good name in the money market should neglect it.

* * *

PETERBORO BOARD OF TRADE.

An abridgment of proceedings at the annual meeting of the Peterboro Board of Trade was prepared for our last issue, but was unavoidably held over, along with two or three pages of other matter. It was the seventeenth annual gathering, the president, Mr. D. Hughes Charles, in the chair. Many communications were read to the board by the secretary, Mr. T. Q. Quartermaine, several of them regarding the location of further industries in Peterboro. Mr. Charles, in his third annual report, referred to the fact that in July last Peterboro became a city. She has for several years past been making steady growth, but the year 1905 shows remarkable progress. About 250 new houses have been erected, most of them of a good class, and additions have been made to some of the factories. The total assessment of the city is now $6,658,410, which is an increase for the year of $784,146. But as the assessment upon factories is purely nominal these figures do not give the true value of the realty. Five miles of new cement sidewalks were laid, which makes altogether over twenty miles of modern sidewalks in the city. Contracts were let for about two and a half miles of new sewers, which when completed will make nearly fifteen miles of sewers in use. Approving mention is made of the American Cereal Company's 600-barrel mill, the Peterboro Cereal Co., and the Shovel Co., also of two smaller industries, the Novelti Co., Ltd., and the Pre-Payment Electric Meter Co., which both have very encouraging prospects. The city merchants are prosperous, the farmers having had a good year, and labor being well employed. Closing of stores at nine on Saturday evenings was advocated in the report.

A lengthy paragraph is devoted to the Trent Valley Canal, "our canal," as Mr. Charles calls it; and a delegation goes to Ottawa to urge the necessity of having the two ends of the canal finished so that the benefit of continuous navigation between Port Arthur and Montreal may be felt. "At the meeting of the Royal Commission held here in 1904 it was shown that the cost of carrying wheat from Fort Wil-

Toronto, 27th February, 1906. W. D. ROSS, General Manager.

The Traders Bank of Canada.

Notice is hereby given to the shareholders of the Traders Bank of Canada that a special general meeting of the shareholders of said Bank will be held at the Banking House, 10 Front Street West, in the City of Toronto, at the hour of twelve o'clock noon, on Tuesday, the 17th day of April, 1906, for the purpose of considering, and if approved, of passing a By-law increasing the capital stock of the Bank owing to the great expansion of its business, and to consider the day upon which the Annual General Meeting shall be held, changing the date from June to January, and also to discuss the question of paying the dividend quarterly instead of half-yearly as at present.

Dated at Toronto this 26th day of February, 1906.

By order of the Board.

H. S. STRATHY,
General Manager.

liam to Montreal would be only three cents per bushel via this route."

The secretary presented his report, showing the number of general meetings held and the average attendance, which, considering that the membership numbers 78, was by no means so good as it should have been, especially after the very plain chiding of the president on the subject a year ago. Mr. Quartermaine also read the report of the treasurer. A motion by Mr. Patterson, seconded by Mr. W. H. Denham, that the officers of 1905 be re-elected for 1906, was carried, as was also one moved by Col. E. B. Edwards and Mr. R. M. Dennistoun, extending hearty thanks to the president for his very faithful services. On condition that "no one else wanted the job," Mr. Charles good-naturedly consented to retain the presidency for another year. No one did offer for the job, and so the officers re-elected, according to Mr. Patterson's motion, are: President, D. Hughes Charles; vice-president, B. F. Ackerman; secretary, T. Q. Quartermaine; treasurer, K. Eardley-Wilmot.

* * *

U. S. FIDELITY AND GUARANTY CO.

The United States Fidelity and Guaranty Co., of Baltimore, Md., shows steady and substantial gains for the year 1905, while it also shows, what is more rare, a reduction in expenses. A comparison of some of the main items for 1905 with those for 1904 follow:

	1904	1905
Premiums written	$2,102,589	$2,289,199
Premiums received in cash	2,135,331	2,233,651
Expenses	1,293,074	1,225,824
Losses paid	575,719	983,428

It is learned from the above comparison that the premiums show an increase of $186,609, and the expenses a decrease of $67,250. The total funds on hand were greater last year by $256,083, and now foot up $3,560,889, of which over $2,000,000 is represented by bonds and stocks, and another half million by real estate owned. The company maintains a reserve for outstanding claims amounting to $312,398, unearned premium reserve, $1,153,670, and after providing for all other claims, surplus and undivided profits of $261,418 is shown, exclusive of the cash capital of $1,700,000. Thus the total resources available to protect its contracts are $3,427,485. President John R. Bland is a company-builder of ability, and sets a high standard for his employees. In Canada the affairs of the company are managed by Mr. A. E. Kirkpatrick, of Toronto, who has made a good record.

* * *

PEOPLE'S BUILDING AND LOAN ASSOCIATION.

This London company has just made public its thirteenth yearly report. It shows gross profits of $47,876, and net profits of $28,978. To pay six per cent. dividend required $12,436; a sum of $12,815 was applied to terminating shares; $3,000 was added to reserve, making that fund $20,000, and a balance of $726 was carried forward. The bulk of this company's shares consists of permanent stock ($315,300) and it has $179,000 in terminating shares. It owes $64,130 to debenture-holders, $56,240 to depositors, and $35,277 to its bankers. Turning to the assets it has some loans on terminating shares; $528,581 in mortgages; $32,000 in real estate ($27,000 in head office buildings), $17,800 in cash, and $94,000 in stock in course of collection. The chairman's address shows that $56,000 worth of permanent stock was sold during the year, now selling at a premium, also that money came in freely on both debentures and deposit account, showing the good repute of the company. It is apparent from the remarks of the manager at the meeting that the company is aiming to become a permanent loan company and to do away with other kinds of shares. The People's is making progress.

TRADE NOTES.

Aubrey and Walter Bishop propose to establish a vinegar factory at Lower Canning, N.S., which will do a good deal to utilize the cull apples of the Cornwallis valley.

The London Pant, Overall and Shirt Manufacturing Company, London, Ont., has been converted into a joint stock company with a capital of $40,000. The charter members include Thos. Deeley and A. T. McMahen, of London.

The Smart Bag Company, Limited, in which Charles Allan Smart, of Montreal, is the principal mover, has been authorized by Dominion charter to make, buy and deal in cotton, canvas and jute, bags, burlaps, linens, ducks, etc. The capital stock is placed at $1,000,000.

The Hillhurst Wine Manufacturing Company, Limited, is the name of a company which has just been granted an Ontario charter, and in which E. Gould Brown, wine manufacturer, of Thorold, is interested, for the purpose of growing grapes and manufacturing and selling wine made therefrom. The capital stock is placed at $100,000.

The Metropolitan Oils and Soaps, Limited, Toronto, has been granted a charter by the Ontario Government. It will purchase the assets of the Metropolitan Soap Co., Limited, oil producing lands, manufacture and deal in soaps, oils and varnishes. The capital authorized is $100,000, and among the provisional directors named are Jas. McLaughlin and Frank Arnoldi, of Toronto.

Drapers in England are agitating now for relief from the tyranny of the yard-stick. They want distributors to mark all cloths at each yard and to number the yards consecutively so that serving the customer is made easy and that a glance will show how much of a roll of cloth remains. A benevolent interest is being taken by them in a machine which measures automatically and fixes a small numbered metal disc at regular intervals. Their demand is that all cloths exceeding six-pence a yard in value shall be thus marked, and if they are prepared to pay for the trouble some of the wholesale houses may like to oblige them. At present, the objection is the expense, and though it is feasible to number a whole piece throughout in the first instance, it gives more trouble to number afresh each part of it that may be wanted; as must be done if the numbering is always to commence at 1. Trade in grocery, drugs and similar goods has been simplified a good deal by the parcelling into pounds that is done by wholesale suppliers. Cloths are dissimilar, because the buyer of a dress wants eight current yards and not eight separate yards.

* * *

—Under the provisions of the Railway Act of Canada, as the Portage la Prairie "Liberal" reminds us, transportation companies are compelled to put in a uniform standard of crossings where their lines cross rural roads. This is being neglected in Manitoba and the council of Portage la Prairie is doing a good work when it takes the matter up and brings it to the attention of the Railway Commissioners of Canada.

* * *

—The evidence given on March 10th by an expert witness as to the condition of the track of the Toronto Street Railway was not such as to inspire belief in the "foresightedness" or economy of that corporation. Mr. John Kerin, superintendent of tracks for the Detroit Railway Company, gave it as his opinion before a board of judges—when the question of the assessment of the company's tracks was being heard—that "twenty-five miles of the company's track absolutely is worn out, forty miles in bad condition, fourteen miles fair, and fourteen miles good." Some of the track, he said, is the worst he has ever seen. It is years since we ventured to express the opinion that this company, the Toronto Street Railway Company, did not look ahead enough and provide for the future, in respect of their sinking fund as of other things. Here is another striking illustration—that is, if Mr. Kerin's opinion is of any value. If the track is only one-half as bad as he describes it, will the manager say the company can keep pace with the city's growth.

OUR SAINT JOHN LETTER.

The city of St. John has at last brought the street railway company to terms, and will secure extensions of its track that should long ago have been made. These are to Carleton, on the western side of the harbor, and to Fairville, also on the west side. These extensions have been promised for years, and this winter St. John went to the Legislature with a bill seeking power to build and operate a line on the west, and compelling the street railway company to give and receive transfers. The railway company on its part took a bill to secure a repeal of some legislation previously secured by the city defining the repair work it must do in any lines built on the west side. The result of these two bills was a conference between the different parties that ended in the present company promising to build and operate at once the proposed additions, and to contribute annually toward the maintenance of the streets if the objectionable legislation of last year was withdrawn. All this has been set out in writing and duly signed, so it may be presumed that the oft-promised extensions will become realities during the coming summer. The new lines will serve a populous section on the outskirts of the city, and should result in building up the districts and in increasing the company's business.

The offer made by Messrs. Greenshields & Greenshields, of Montreal, to lease for $21,000 per year the Central Railway of New Brunswick was voted down in the Legislature. The Premier was the only member of the Government who favored the proposal. Members of the Opposition moved and supported an amendment postponing action until further information was available as to whom this Messrs. Greenshields were acting for, etc., but when this was defeated they voted solidly against accepting the offer. There are many who wonder if the offer was a *bona fide* one. The Government controls the road, and the expenditure on it has been vigorously criticized. The Opposition vote not to sell it has now silenced their criticism, and maybe has paved the way for still larger expenditures in the future, for a railway is an institution that must be kept going, and it eats up money rapidly. There is, however, a hope that the Grand Trunk Pacific will take over the property as a direct line between Chipman and the seaport at St. John. The road runs fifty miles nearly north and south from Chipman to Norton.

Announcement is made to-day that an influential delegation will leave in a few days for Ottawa to urge the Federal Government to give financial assistance toward the extension of the Tobique Valley Railroad from Plaster Rock, in Victoria county, to the Forks of the Tobique, a distance of twenty-eight miles. From there the road will be extended at a later period to connect with the International Railway, now building across the Province from Campbellton to St. Leonard's, in Maine. The Tobique Valley road runs through a valuable timber and game country, and will open up to settlement a section that, when cleared, should be as fertile as any in the Province.

Reference has been made at different times to the great number of steamers competing for business on the St. John river. One of the finest of the fleet was burned a few days ago at her winter quarters, and, as her owners will not rebuild, the competition is reduced to that extent. Last year none of the companies made any money, but there is some likelihood of a business agreement this season that will stiffen both passenger and freight rates, and so give all a chance—that is if they live up to it.

The winter port business of St. John continues to grow and expand. The value of the export shipments to date is $16,188,086. This has been made in seventy-five steamers. and the twenty-five more to run to the close of the season will carry the total probably beyond $20,000,000. Last year there were ninety-nine steamers, and they took away goods valued at $13,706,877, so that the trade to date is nearly $3,000,000 greater than the whole business of last winter. Next year we shall have still greater accommodation, and there should be a corresponding increase in the volume of trade.

The winter storms have done some damage along the New Brunswick coast, but up to the present the disasters to shipping have not been as numerous as in previous winters. A few days ago a gale badly wrecked a new addition to a breakwater at Church Point, Petit Roche, causing a serious loss to the contractor. The whole of the new work was carried out to sea and broken up.

A thoroughly up-to-date plant of galvanizing work has just been installed in connection with the James Pender nail factory. This is the first plant of the kind in the city, and it is one of many extensions made to the business during the past year by the Pender Company.

* * *

St. John, N.B., 20th March, 1906.

⁂

KING'S COUNTY BOARD OF TRADE.

The president of this board reminds his hearers in the annual address delivered last week in Kentville, N.S., that, living in a pleasant country like the Cornwallis Valley, instead of the rising generation looking toward the distant North-West for greener fields, they "should carefully look to our own Province, where less than 40 per cent. of the land is under cultivation. It is to be deplored that in the three richest agricultural counties of Nova Scotia the population has decreased 10 per cent. during the last score of years." With the varied resources which that Province has to offer, this, he properly declares, ought not to be. Some trenchant paragraphs are devoted to the present mail service of Canada across the Atlantic, which is termed "a disgrace;" and the port of Halifax is, in Mr. Allen's opinion, the most suitable winter port on the Atlantic coast from Maine to Labrador. Crops of hay and potatoes have been abundant in King's County, N.S. The latter product has been discriminated against in the Cuban market, but a promising market appears in Mexico, with which a new line of steamers places Halifax in quicker communication.

Most of the report deals with apple cultivation and export; and this is not surprising, for it is to be remembered that this county comprises one of the most beautiful parts of Nova Scotia, bordering as it does on the Bay of Fundy and on its eastern enlargement, Minas Basin. To see this district in the month of June is to see an almost continuous mass of apple bloom. Its apple-growers did well last year, for the crop of the valley is likely to total at the end of the shipping season in the neighborhood of 325,000 barrels, returning to the valley one-half million dollars more than the previous year's crop. Yet in many features it has been disappointing. Climatic conditions, during the early part of the season, favored the growth of fungi inimical to that fruit. Mr. Allen insists upon the efficacy of spraying the trees with Bordeaux mixture. He has been in the English markets, and here is what he says:

> When one comes to see a box containing 40 lbs. of fruit that has travelled all the way from the Pacific coast to London selling for 18 shillings, while along side of it the bulk of the Nova Scotia barrels with three times the quantity of fruit in them are selling for 12 to 16 shillings, it is worthy of consideration. The Britisher will pay a high price for either a good dessert or cooking apple, *but only wants the kinds that suit him;* and instead of this valley producing so much trash, let us call a halt and find out what we can profitably grow to suit the unlimited markets of Great Britain.

And he tells how at one sale Ontario Baldwin apples sold for 24 shillings a barrel, Nova Scotia Baldwins brought only 16 shillings. Allowing 3 shillings for difference in size of barrel, there was still 5 shillings less obtained for the Nova Scotia quality. He is dissatisfied with the Fruit Marks Act; and complains that the $15,000 Government subsidy intended to expedite marketing of apples has not served its purpose.

BANKING AND FINANCIAL.

The annual statement of the Nova Scotia Steel Company shows profits of $559,906 for last year, or an increase of $58,569 over 1904. Interest on bonds also brought in an additional sum, representing $248,177 against $98,177. The year's surplus was $99,576. There was an increase in the quantity of pig iron sold of 28,723 tons, and in the quantity of coal mined of 58,141 tons.

Mr. C. N. S. Strickland, assistant manager of the Union Bank of Halifax, was in Charlottetown the other day with the purpose of establishing a branch of the bank in that city. The bank has secured the premises in the Morris Block, Queen Square, in the store lately occupied by J. C. Sprague as a boot and shoe store, and will open, says a Prince Edward Island exchange, just as soon as the premises can be fitted up.

A branch of the Imperial Bank of Canada has been opened in the town of Red Deer, Alberta, under the management of W. P. Helliwell, formerly accountant of Calgary branch. Branches of the bank will, we are told, be opened in the cities of Quebec, P.Q., and London, Ont., in the course of a few weeks. Premises are now being prepared for occupation. A branch is in course of being established at Banff, Alberta.

The provisional offices of the Farmers' Bank of Canada are in the North American Life Building, King Street West, Toronto. The authorized capital of the bank is $1,000,000 in 10,000 shares of $100 each. Five thousand shares are now offered at par. The list of provisional directors includes a number of well-known and representative names. Here is the list: Lieutenant-Governor Forget, Regina; Major Beattie, of London; Col. R. McLennan, of Cornwall; W. S. Calvert, M.P., farmer, Strathroy; Thos. Charlton, lumberman, Collingwood; John D. Ivey, H. W. Anthes, Thos. Urquhart, ex-Mayor, and John Ferguson, M.D., Toronto; Col. Munro, M.P.P., Embro; Hon. A. G. McKay, Owen Sound; Geo. W. Neely, M.P.P., farmer, Dorchester; D. K. McLeod, general merchant, Parkhill.

The Bank of Nova Scotia will take possession of their new offices in the Schurman Block to-morrow, says a recent issue of the Summerside, P.E.I., "Journal." The location is all right for a banking institution, being right in the heart of the largest businesses on Water Street and corner of Summer Street. The new offices are fitted in quartered oak and burnished brass, procured from the London Office and Specialty Company. The building is described as an ornament to the town. The manager's office is in the rear of the corridor but facing on Summer Street, will be well lighted with chipped glass, the same also in the main office. The vaults of which are two, one in the basement for the books of the institution, the vault for the cash is off the main bank office, and both are large, strong, and fireproof. The genial manager is Mr. McKie.

How he left a bank to become an opera singer has been related by Eugene Cowles, long with the Bostonians, and now singing with Lilian Blauvelt in a new comic opera as a basso:—"In 1888 I was occupying the position of teller in the First National Bank of Chicago. Messrs. Karl, Barnabee and MacDonald, of the Bostonians, had heard me sing a number of times in Chicago, both in local churches and at musical entertainments. I received an offer by wire from Mr. Barnabee, asking me, if I accepted, to come to Boston immediately. I took the proposition to Mr. Lyman J. Gage, who was then president of the bank, and asked his advice. In a most fatherly way he said: 'My boy, I know you like to sing, and your voice may make more money for you than you can get in any capacity in our bank outside that of president. Go and try the stage, and if you don't like it, come back to us. There will always be a place for you in the bank.'"

"I have never known English capitalists to look with so much sympathy towards Canada as at the present time," said Mr. Charles A. Hanson, of the London banking house of Messrs. Coates, Son & Co., in Montreal on Monday. "Canadian securities of all kinds are in excellent demand, and are influenced less by a depressed market than almost any others. To my personal knowledge, large sums of money have come to Canada within the past twelve months. Although the nation as a whole may not have fully awakened to a complete knowledge of Canada's resources, the leading minds in commerce and finance have probably fully grasped the possibilities of the country. The three great railways have contributed in making Canada well known. Lord Strathcona has also been a powerful factor in the same direction, while Mr. Chamberlain's great campaign in the interest of Imperial Unity has also drawn the attention of the United Kingdom towards Canada and her magnificent resources." Here follows a pungent bit of advice: "People, however, should not take advantage of this sympathetic feeling on the part of British capital and impose projects of a doubtful character upon them. The Canadian people themselves should see that nothing happens that would do harm to the credit and standing of their country."

* * *

LIFE ASSURANCE ITEMS.

At a meeting of the directors of the Excelsior Life Insurance Company, held this week, Mr. Edwin Marshall, who for the past thirteen years has been secretary, was appointed general manager of the company, and Mr. Charles Q. Parker secretary-treasurer. Mr. Parker, we are told, has been in the service of the company ten years, discharging during the past five the duties of cashier.

The British Blue Book, reporting the condition of life assurance and of life companies of the British Islands, has been published. It shows that the people of those islands are now insured by ninety-six home companies to the enormous total of £941,879,726, which is equal to $4,705,398,630, and this great sum does not include the figures of the colonial and foreign companies. Premiums were paid last year in the Old Country to the amount of £35,644,141 ($178,220,705), and the year's claims came to £22,122,435 ($110,612,175), there being an increase under the latter head of £1,136,742 ($5,683,710).

According to evidence submitted to the Insurance Commission by officers of the Department, several of the smaller and newer Canadian life companies are doing business at an abnormally heavy ratio of expense; and some of them, as well as some of their larger confreres, have been busy in writing up certain assets to improve their showing at the end of a year. Both these circumstances ought to give pause to the restless folk in want of employment who persist in trying to float new insurance companies, which, if not as plentiful as projected new banks, are more numerous than the needs of the country warrant. If promoters are not deterred, however—and it takes much to deter a promoter—the prudent investor whose capital is sought will, if he follows the evidence, possibly conclude that he may find other avenues which afford a more rapid return, at least, for his money.

Without commenting upon the proceedings of the Ontario Grand Lodge A.O.U.W., now in session, we note a very marked divergence between the conditions of two other jurisdictions of the Workmen. The Detroit "News" states that the A.O.U.W. of Michigan was, "in November last, in spite of extra assessments levied on its older members, more than $150,000 'in the hole.' To-day, after four months of special assessment, the Order has over $180,000 of death claims due and unpaid." But in contrast with this, the Grand Lodge of the A.O.U.W. for Manitoba and the Canadian West, meeting last week in Winnipeg, had delegates present from almost every portion of three Provinces. The meeting was declared to be the most enthusiastic and harmonious in the history of the Grand Lodge. The difference appears to be in the age of the members. The Michigan members are mainly older men; the Manitoba members young and hopeful.

STATEMENT OF BANKS acting under Dominion Gov't charter, for the month ending 28th Feb., 1906.

		CAPITAL					LIABILITIES
		Capital authorized	Capital Subscribed.	Capital paid up	Amount of Rest or Reserve Fund.	Rate per cent. of last Dividend declared.	Notes in circulation.

J. M. COURTNEY,
Deputy Minister of Finance.

THE SUGAR DUTIES BEFORE THE TARIFF REFORM COMMISSION.

Ottawa, 19th March, 1906.

The following is the memorial on certain statements regarding the duties on sugar, filed 2nd March, 1906, with the Tariff Commission by the Canada Sugar Refining Co., in reply to the memorandum submitted by Mr. Robert Anderson on the same subject:

On the 8th February, Mr. Robert Anderson, acting on behalf of Messrs. Robert Crooks & Co., importers of refined sugar, presented to you an elaborate statement in regard to the sugar duties, covering forty-two pages of tvpewritten matter, which may be summed up as an unreserved indictment of the Canadian duties on sugar, under which Mr. Anderson asserts the refiners have a complete monopoly of the Canadian market, and amass enormous profits at the expense of the Canadian consumer.

Mr. Anderson supports his case with an elaborate series of figures and calculations, and has spread his memorial broadcast.

Under these circumstances, the reply which we now make is an endeavor to show you that Mr. Anderson is not a reliable authority on this matter, and to give to his conclusions an emphatic denial and contradiction as inconsistent with facts.

Before, however, dealing with the main question, one or two points may be noted. On page 3 Mr. Anderson asserts, quoting his own words, referring to last season: "The refiners were maintaining an artificially high market in Canada until recently, when they reduced their prices to make as unprofitable a return as possible for the domestic beet factories in Ontario." This statement is absolutely devoid of any foundation, as the following facts will show:

1905 was a disastrous year to every dealer in sugar, decline after decline in values took place, the refiners were obliged, as usual, to follow the markets wholly independent of the question of loss or profit. The following successive declines actually took place:

Reductions in Price of Refined Sugar from January, 1905, to date.

1905.	Declines. No.	Amount.
February	1	$0 10
April	1	10
May	3	30
June	3	25
August	1	10
September	2	20
October	3	30
November	1	10
1906.		
January	2	20
February	1	10
Per 100 lbs		$1 75

Total amount of declines before Commission met in Montreal, $1.35.

Total amount of declines after Commission met in Montreal, 40 cents.

The great majority of these declines, it will be noted, took place long before the Ontario beet sugar came into view (about the beginning of November), and it may be summed up that Mr. Anderson's accusation is wholly baseless.

Another of Mr. Anderson's statements runs as follows: "The refiners' actions savor of a demonstration to impress the trade and the country, for on the morning the hearing was opened in Montreal (7th November) the facts were that at that time (says Mr. Anderson) there were no supplies of preferential sugar available for import." Now, the Tariff Commission opened on 7th November, and we direct special attention to the last sentence of Mr. Anderson's, for we would draw attention to the fact that the manifests of this port show at this very time, that is, during the month of October, 1905, when, as he says: "No preferential sugar could be had," his firm alone imported at Montreal over 11,000 bags of sugar. What duty this sugar paid we do not know, but it must have been preferential, at a rebate of 33 1-3 per cent., because Mr. Anderson says elsewhere that that kind only can come to Canada.

And if further proof is required of the value of Mr. Anderson's "facts," we would quote reports of one British port—Greenock—from which the following exports took place for Canada:

Week ending—	Tons.
14th October, 1905	240
21st October, 1905	565
28th October, 1905	450
4th November, 1905	200

Mr. Anderson goes on to another point where he assumes to speak of things of which he knows nothing and can know nothing. In page 5 he says: "The Canadian refiner buys only in bond, and does not pay on the average any premium to the British West India planter for his sugar over what the New York refiner would give for it, which is pocketed by the Canadian refiner as extra profit." All this is false. The Canadian refiner has paid, and does pay, a large share of the preference to the West India planter.

In 1904 we paid to the West India sellers an average premium of 12 9-10 cents per 100 pounds over and above the New York market price of the day on account of this preference.

In 1905 we paid an average premium of 13 7-10 cents per 100 pounds.

Now, the sugars on which we paid these extra prices ranged in test from 75 degrees to 96 degrees, and the preference to which these sugars were entitled by law ranged accordingly from 13 cents to 24 cents per 100 pounds. A large share, therefore, of the reduction of duty on raws has gone to the West India planter. As it is a fact that Mr. Anderson is engaged in importing refined sugar, represented to be made from West India raws, and claims and collects a rebate of over 40 cents per 100 pounds, it becomes appropriate to ask if he himself, or his firm, contributes any portion of this large premium to the West India planter, to whom it is as righteously due as from that portion of their crops which the Canadian refiner uses.

Mr. Anderson proceeds to his main argument, viz.; that the Canadian refiners are over-protected, his assertion being that, to quote his own words: "The sugar refiners are granted over 50 per cent. more protection than is given to American refiners."

Mr. Anderson's statement in support of this assertion is as follows:

Canadian duty on refined	$1 26½
Canadian duty on raw	71½
Apparent protection	$0 55
U. S. duty on refined	$1 95
U. S. duty on raw	1 68½
Apparent protection	$0 26½

In these figures Mr. Anderson conveniently conceals the following facts:

1st. He takes the highest rate of Canadian duty, viz., on granulated, omitting to mention that on all soft sugars the Canadian rate of duty runs down as low as $1.08 per 100 pounds, which reduces the Canadian duty on refined to $1.20, and by the preferential tariff to 80 cents. While the American duty on all qualities and grades of refined is at the uniform rate of $1.95 per 100 pounds.

He further assumes that the American refiners are paying a duty of $1.68½ on their raw material. Let us examine this.

The United States consumption of sugar of all kinds during the year 1905 was 2,632,216 tons, and the sources of supply from which this was drawn were as follows:

United States Consumption, 1905.

Source.	Duty.	Tons.
Domestic cane and beet	Free	576,124
Hawaii and Porto Rico	Free	501,425
Philippines	$1 26⅜	14,673
Cuba	1 34 8-10	1,101,611
Other countries	1 68½	438,383

From these figures it is proved that the percentage of—

Sugar imported paying full duty is only 21 1-3 per cent. of the whole.

Sugar consumed paying full duty is only 16 2-3 per cent. of the whole.

Consequently the average duty paid on imported sugar, basis 96 degrees, is $1.09½ per 100 pounds, and on sugar consumed, basis 96 degrees, $0.8518 per 100 pounds.

The foregoing table shows that the American refiner, instead of paying $1.68½ on his raw sugar, really contributes that duty on only 21 per cent. of the total importations, and the actual contribution to the American revenue by the American refiner is $1.09½ per 100 pounds at the most. Applying these corrections to Mr. Anderson's table above, we find the true situation to be:

	Per 100 lbs.
Applying preference, the Canadian duty on refined of all grades is, estimate..	$0 80
On raw	48
Apparent protection	$0 32

	Per 100 lbs.
U. S. duty on refined	$1 95
U. S. duty on raw, as explained	1 09½
Apparent protection	$0 85½

So that, by deducting 23 cents from the Canadian protection, and adding 59 cents to the American, we arrive at the truth, which, as above, is:

American protection, 85½ cents per 100 pounds.

Canadian protection, 32 cents per 100 pounds.

You will observe that the word "apparent" is used in both cases, because, as it takes more than 100 pounds of raw to produce 100 pounds of refined, the protection to refiners is reduced.

Mr. Anderson proceeds to calculate the advantage to the Canadian refiners from the dumping clause. Now, it may be said in reference to the dumping clause that while it is a righteous provision against that process, applicable to other commodities besides sugar, it has never had the effect of adding one single cent to the price of Canadian refined sugar, and never can do so as long as British refined can be had, to which the clause does not apply.

He proceeds to contrast the price of granulated in New York with that in Montreal. To quote his own words:

The net prices were recently on the same day:

	Per 100 lbs.	Per 100 lbs.
Granulated in New York....	....	$4 45
Paying a duty of........	$1 68½	....
Granulated in Montreal.....	....	4 08½
Paying a duty of.......	47 2-3	....
	$1 20 5-6	.3650

Therefore, he says, while the New York refiner paid $1.20 5-6 per 100 pounds more duty on his raw than the Canadian refiner did, the return to the Canadian refiner was apparently 84 1-3 cents per 100 pounds more than the New York refiner got.

Applying the necessary correction to this statement, we find that the correct figures for the day Mr. Anderson appeared before the Commission were as follows:

	Per 100 lbs.	Per 100 lbs.
Granulated in New York, net	....	$4 45
Paying a duty of.......	$1 09½	....
Granulated in Montreal.....	....	3 84¾
Paying a duty of.......	47 2-3	....
	.61 5-6	.60¼

Leaving Montreal 1 7-12 cents per 100 pounds better than New York instead of 84 cents as Mr. Anderson has it.

But we attach little importance to the comparison, for it is next to impossible to follow the ups and downs of the New York market. Substantially, however, the comparison has been just about the same as the corrected figures given above through the year past.

It seems unnecessary to pursue the analysis of Mr. Anderson's calculations further; what remains is affected with the same disease of erroneous data and conclusions as in the cases above dealt with.

We do not hesitate to affirm that the information he offers the Government is inaccurate and unreliable and his conclusions absurd. His proposed tariff changes would certainly answer his purpose and transfer to the importers the entire business of the supply of refined sugar to this country, and deprive the West Indies of the traffic and preference they now enjoy.

Referring to the inaccurate statements with regard to the protection and profits of the sugar refiners, a glance at the subjoined table will be instructive.

Table showing the ad valorem equivalents of present duties at present market value:

Duty on Raw Material. p. c.	Imported Goods. p. c.	Protection. p. c.
Cotton, no duty........	20 to 35	20 to 35
Wool, no duty	30 to 35	30 to 35
Silk, no duty	25 to 35	25 to 35
Jute, no duty..........	25	25
Rubber, no duty........	25 to 35	25 to 35

Sugar:

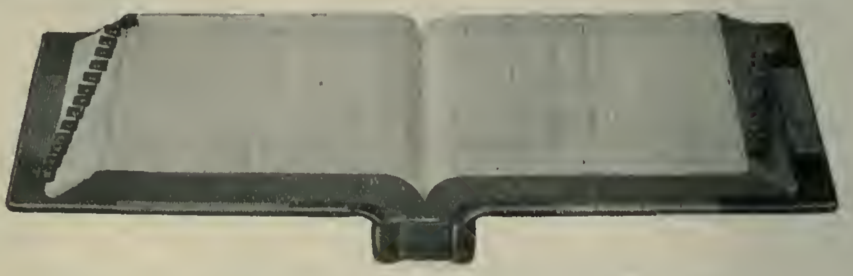
	Raw pays.	Refined on the average.	
(General tariff) ...	45 2-5	*48 1-5	2 4-5
(Pref. tariff)	30 3-10	*32 3-20	1 7-8

The above figures show that sugar refining instead of being as alleged a specially favored industry has probably a lower rate of preference from the tariff than any other industry of importance in the Dominion, a difference of less than two and one-half per cent. ad valorem existing between the duty collected from the raw material and that on competing importations of refined.

Hyman Cohen, of Montreal, doing business under the style of the Royal Shirt and Overall Company, has become involved through the defalcations of a book-keeper, and heavy losses by bad debts, and is seeking compromise indulgence. He proposes to pay 30 per cent. on trade liabilities of about $15,000.

A compromise arrangement is being sought by W. C. Balcom, of Hantsport, N.S. He has been long in business, originally as a jeweller, afterwards adding a general stock of merchandise. Of late years he has also done a good deal in shipbuilding, besides something in fruit-farming, stock-raising, etc. For this is one of the fascinating parts of Nova Scotia, in the apple-growing and exporting country, and on Minas Basin, a point which the Churchills and the Norths have made famous for their shipyards. It is thus hardly to be wondered at that he should get widespread and be found slow pay, as has been the case of late. He is said to owe in the vicinity of $10,000, which is not a great sum considering the variety of his investments.

THE CRAIN CONTINUOUS LEDGER



You may be planning to re-organize your book-keeping system ; if so we offer you the ripe result of years of experience in designing Loose Leaf Systems of every kind, and will be glad to advise you. Call up any of our branch offices or agencies, or write us direct for further particulars.

Western Bank of Canada

Dividend No. 47.

NOTICE IS HEREBY GIVEN that a Dividend of Three and One-half per cent. has been declared upon the Paid-up Capital Stock of the Bank, being at the rate of Seven per cent. per annum, and that the same will be due and payable on and after

Monday, April 2nd, 1906,

At the Offices of the Bank. The Transfer Books will be closed from the 15th to the 31st of March.

Notice is also given that the Twenty-fourth Annual Meeting of the Shareholders of the Bank will be held on Wednesday, the 11th Day of April next, at the Head Office of the Bank, Oshawa, Ont., at the hour of Two o'clock, p. m., for the election of Directors and such other business as may legally come before the Board.

By order of the Board.

Oshawa, Feb. 21, 1906. T. H. McMILLAN, Cashier.

LA BANQUE NATIONALE.

NOTICE—On and after Tuesday, the first of May next, this Bank will pay to its shareholders a dividend of three per cent. upon its capital for the six months ending on the 30th April next.

The transfer book will be closed from the 16th to the 30th April next, both days inclusive.

The annual meeting of the shareholders will take place at the banking-house, Lower Town, on Wednesday, the 16th May next, at three o'clock p.m.

The powers of attorney to vote must, to be valid, be deposited at the Bank five full days before that of the meeting, i.e. before three o'clock p.m, on Thursday, the 10th May next.

By order of the Board of Directors.

Quebec, 20th March, 1906. P. LAFRANCE, Manager.

EASTERN TOWNSHIPS BANK.

DIVIDEND No. 93.

Notice is hereby given that a Dividend at the rate of eight per cent. per annum upon the paid-up Capital Stock of this Bank has been declared for the quarter ending 31st March, 1906, and that the same will be payable at the Head Office and branches on and after

Monday, 2nd day of April next

The Transfer Books will be closed from the 15th to the 31st of March, both days inclusive.

By order of the Board,

Here are some figures about the Trent Valley Canal, from the address of the president of the Peterboro' Board of Trade: The total length of the Trent waterways is 202¼ miles. The part navigable, 170 miles, unnavigable, 32 miles, and the unnavigable parts are unfortunately at both ends. The Trent Canal route, counting the return trip is 500 miles shorter than the Welland Canal route, and 1,500 miles shorter than the Erie Canal route. This means a great saving in time and money. The Erie Canal now carries barges of 240 tons burden, but the expenditure of $101,000,000 in the next few years will increase its capacity to 1,000 ton barges. The Trent Canal has a capacity for barges of 800 tons running at high speed.

Mercantile Summary.

A fur trader came into Edmonton last week and sold his furs privately to Messrs. Revillon Bros., for a sum in the neighborhood of $15,000. The outfit included 67 silver foxes.

The annual meeting of the Regina Land and Investment Company, Limited, was held on 13th March. Hon. Walter Scott was re-elected president and Jas. Balfour secretary-treasurer.

The French fishing fleet on the Newfoundland banks is smaller this season. The total export of codfish from St. Pierre and Miquelon for the year 1905 totalled 246,324 quintals, against 264,108 quintals for 1904.

A petition is being presented to the Government of Manitoba, asking for various range lights on Lake Manitoba, the traffic on which is growing steadily. The Manitoba Gypsum Company finds the need of such lights.

At Red Deer, Alberta, 206 entries were made in the Dominion Land Office in February. And in the first week of March there were 134, representing 462 souls. These consisted of Americans, Germans, British, Canadians, Swedes, Manx and Turks. One hundred and two of the number are practical farmers.

The proposal of the McGregor-Gourlay Company, of Galt, to the Berlin, Ont., Council, has been endorsed by that body. The company is asking for a straight bonus of $75,000, and agrees to move its entire plant to Berlin after it has erected buildings with twice the capacity of their present buildings in Galt.

At a special meeting of the Brandon, Man., Council last week, April 10th was fixed on as the date to submit to the ratepayers a by-law providing for the expenditure of $80,000 on school buildings this year, including a new collegiate building. On the same date, the proposition of the Western Power and Machine Company will be decided upon.

A cable to the Robert Reford Company, Montreal, agents of the Thomson line, says that Messrs. Wm. Thomson & Sons have purchased a large new steamer to run in the Montreal-London service. This steamer is 400 feet long, fitted with cold storage and cool air. The steamship "Fremona," which formerly ran on the London line, goes to the Leith line, to which port there will be a regular fortnightly service.

The city of Kingston and the village of Cataraqui have been granted permission by the Ontario Legislature to purchase the Kingston, Portsmouth and Cataraqui Electric Railway. The Railway Committee has also approved the bill of the Port Credit, Brampton and Guelph Railway, which, we believe, will be the first road in Canada to be operated by motors run by gasoline generating steam. The company has power, however, in the event of the gasoline method failing, to develop water powers or to utilize steam for its purposes.

CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

The Klondike Mine's Railway is to be extended to Sulphur, which is about twenty-two miles from Dawson City.

J. H. Collins and W. H. Hunter and a group of American capitalists are said to have taken out a bond on the Washington and Idaho claim on the west fork of the Kettle River.

Willis & Company, Limited, Montreal, manufacturers of pianos, organs, and other musical instruments, have been granted a Dominion charter authorizing a capital stock of $1,000,000. They will probably make also artistic and household furniture, sewing machines, motors, etc.

It is understood that the question of using motor cars on branch lines and rural service lines of the Intercolonial Railway is under consideration. Motor cars have already proved successful in Europe under somewhat similar conditions, and are receiving a great deal of experimental attention in the United States.

The Canada Radiator Company, Limited, Lachine, P.Q., has been incorporated with a million dollars capital. Robert Mackay, R. G. Reid, and John Beattie are among the charter members. It will take over, as a going concern the property and good-will of the Canada Radiator Company, and carry on the business of manufacturers, founders and machinists.

It is stated that the Guggenheim Company, of New York, the well-known copper capitalists, are about to enter the Yukon and Atlin mining districts with an extended plan of operations. They already own some valuable properties near Dawson and intend to instal there three gold dredges and two steam shovels early this season. In the Atlin district they are also going to put in some dredge machinery.

It is learned, says a Halifax despatch, that the well-known firm of Brandram & Sons, of England, will establish through Henderson & Potts, of Halifax, N.S., large corroding works in or near Montreal. This will make the second large corroding works in Canada, and the joint output of this plant with the Carter White Lead Company will give, it is said, a total annual production of 12,000 tons of dry white lead.

Messrs. Marion & Marion, patent attorneys, of Montreal, report the following Canadian patents recently secured: 97,888, Messrs. Aube & Tremblay, Montreal, smoke consumer; 97,892, Horatio N. Bray, Montreal, fire-lighting briquettes; 97,906, Vladimir Petroff, Montreal, building block; 97,933, Dan H. McLeod, Glace Bay, N.S., railway rail joint; 97,943, Edmond Montet, Montreal, soap granulator; 97,971, Charles LeMoine, Pembroke, Ont., concrete mixing machine; 97,983, Alphonse Guenette, Fitchburg, Mass., adjustable shade roller supports; 98,010, August Holmquiet, Bridge, Mass., horse-hoof level gauge.

Mercantile Summary.

The A. M. Forbes Hardware Company, of Vancouver, are about to build a large additional can-making factory.

The Canadian Multi-Phone Company, Limited, Hamilton, has been granted a charter by the Ontario Government to manufacture and sell talking machines, phonograph, multi-phones and musical instruments operated by mechanical devices. The capital stock will be $200,000.

The Maritime Light and Power Company, Limited, St. John, N.B., capital stock $100,000, has been incorporated under a Dominion charter. It will generate, manufacture and distribute light, heat and power, and sell plant and apparatus for these purposes. J. R. L. Starr, of Toronto, is prominent in the undertaking.

The Canada Paper Company held their annual meeting in Montreal last week and elected the following directors for the ensuing year: President, Sir Montagu Allan; vice-president, Mr. H. S. Holt; Mr. Hugh A. Allan, Mr. Bryce J. Allan, Mr. C. R. Hosmer, the Hon. Robert Mackay, and Mr. H. Markland Molson. Mr. F. J. Campbell was reappointed general manager, and Mr. H. M. Thorne, secretary-treasurer. A satisfactory business for the past year was reported.

. The Canadian Pacific Railway has awarded a contract to the British Columbia General Contract Company for an extension of its Pheasant Hills branch from Strasburg to Saskatoon, a distance of about eighty miles, the work to be completed by August. The Grand Trunk Pacific is also hurrying to reach Saskatoon with as little delay as possible. It recently gave the Canadian White Company a contract for building the section from Touchwood Hills to that point, a distance of 137 miles. Apparently there will be rivalry between the two companies as to whose track will reach the objective point first, though the advantage of nearness is considerable for the C. P. R. The latter already owns connection with Saskatoon through its Regina-Prince Albert branch.

We notice some twenty parcels of land in Brandon set out in selections of $50 to $135 each, for sale by the Standard Trusts Company. They are on Lorne, Louise, Princess and Victoria Avenues mostly. But their dimensions are not given. The Brandon "Times" gives an account of some sales, however, within the week which indicate that Brandon people are beginning to hold on tighter to their land than a few months ago. Among them is the sale of the south-west corner of Second Street and Rosser, 100 by 120 feet, for $4,200. The purchasers intend using the property as a lumber yard; the north-east corner of Third Street and Rosser for $3,900, the property measures 75 by 120 feet; 30 feet Rosser frontage just east of A. C. Fraser's store bought for $375 per foot.

DEBENTURES FOR SALE

CALGARY SCHOOL DISTRICT

Tenders addressed to the undersigned for the purchase of $90,000 of Debentures of the Calgary Protestant Public School District No. 19 in Blocks of $10.000 each will be received until 4 o clock p.m., April 9th, 1906.

PARTICULARS

Total amount of issue, $90,000.

Rate of interest, 4½% payable yearly.

Principal repayable in 30 equal consecutive annual instalments with interest at the above rate, at the Imperial Bank of Canada, Calgary.

Purpose of issue: to erect and equip one solid stone school building and one solid brick school.

Total assessed value of School District, 1905, $5,433,469.

Estimated true value of taxable property within the limits of the District, $8,000,000.

Total Debenture debt of the District, exclusive of the present issue, $80,098.

Value of property owned by the District, $190,000.

School rate of taxation, 1905, 7½ Mills.

Population of the District (City of Calgary), 16,000.

Tenders will be received for the whole amount or for one or more blocks of $10,000.

The highest or any tender not necessarily accepted.

W. L. WAINES,
Secretary Calgary Public School Board,
Calgary, Alberta.

Mercantile Summary.

The wholesale stationery house of Grand & Toy, Limited, Toronto, sustained a heavy loss, probably approaching $40,000, from fire on March 15th. Insurance on stock amounts to $42,000.

Among the larger Cobalt companies to be granted letters of incorporation from the Ontario Government is the North American Cobalt Refining Company, Limited, with a share capital of $1,000 000, and head offices at Hamilton.

The construction of so much new trackage on the C. P. R. during the coming season means a simultaneous large development of telegraph lines. Mr. Jas. Kent, manager of telegraphs for the C. P. R. is in the west looking into the details of the subject.

The embarrassment is reported of John McMillan, who is a general merchant at Isaac's Harbor, N.S., and it is said he proposes a 50 per cent. settlement. He is said to have sought similar indulgence, when in partnership with a brother as a merchant some years ago. As a change, he subsequently engaged in gold-mining with only indifferent results.

A demand of assignment has been made upon Adelard Bergeron, of Louiseville, Que. He was formerly a tailor, and has been in business altogether some fifteen years, latterly dealing in dry goods and clothing.——An assignment has been asked of J. L. Landry, handling groceries and liquors, at Etchemin, Que., upon the demand of a Levis jobbing house, to whom he is in arrears for some $700—too much to be allowed to run long in this business.——Theodule Leroux, of St. Armand Station, Que., who has been carrying on several butter factories for some years, decided last spring to engage in storekeeping as well, and bought out the stock of H. Smith. He also had a mail contract, and has evidently attempted too much. He has now assigned.——Lefebvre & Lariviere, of St. Hyacinthe, Que., who started in the handling of oils, paints, etc., in the spring of 1904, are declared insolvent, and H. Lamarre, accountant, Montreal, is in charge of the estate.

Adolphe Clement, formerly a farmer, and since 1897 carrying on business as a retailer of groceries and hardware, at Ste. Agathe, in the mountains of Terrebonne County, Que., has made an assignment of his estate.——Alexander Gervais, of East Farnham, Que., was also a farmer, who took to harness-making three years ago. He is reported insolvent, owing about $1,000.——A demand in insolvency has been made upon Seguin & Courville, grocers, at Valleyfield, Que. They show liabilities of nearly $2,000, and assets of about $1,200.——A shoemaker by the name of M. Tremblay, at Causapscal, Que., in the salmon-fishing part of Rimouski district, who was offering his creditors 25 per cent. on their claims, has been obliged to assign.——L. E. Clement, doing business in the tailoring and men's furnishing line under the style of E. Clement & Bro., at Knowlton, Que., has failed, owing something like $7,500. He only began trading in March 1904, and is reported to have done business on pretty narrow margins of profit.——After some years experience as a clerk, J. Mohen began storekeeping at St. George de la Beauce, Que., in June 1904, with alleged savings of about $1,000. A Quebec assignee now has his affairs in hand for liquidation.

A Firm of Manufacturing Agents

Debentures for Sale.

SEALED TENDERS addressed
" The Finance Department of the City of Brandon, Manitoba."
"Care George F. Sykes, Secretary-Treas."
"Tenders for Debentures"
will be received by the undersigned until 6 o'clock P. M. on Thursday the 12th day of April, 1906, for the following City of Brandon Debentures:

An issue of $90,000.00 Waterworks Debentures, specially secured by charge on Pumping Station property and plant, also by Frontage Tax and Water Rates. Interest 4½% half yearly. Term 30 years. (A further issue of $35,000 00 similar to the foregoing will be made this year.)

An issue of $10,005.00 Local Improvement Debentures, 10 years; also an issue of $24,485.61 Local Improvement Debentures, 20 years; also an issue of $24,576.56 Local Improvement Debentures, 20 years, for laying Granolithic Sidewalks. Rate of interest 5% half yearly. Specially secured by charge on properties fronting on walks.

For full particulars apply to undersigned.

GEORGE F. SYKES,
Secretary-Treasurer,
City of Brandon, Manitoba, Canada.

The assignment of S. E. Landry, general storekeeper, Port Morien, N.S., is chronicled. His affairs have been complicated for some time, and about a year ago he was reported as obtaining an extension. Liabilities are placed at $5,600, with nominal assets considerably larger.

Mr. E. A. Langmuir, secretary-treasurer of the well-known Julian Sale Leather Goods Company in Toronto, has just returned from his European trip. While abroad Mr. Langmuir visited many centres where leather specialties are manufactured. The result of his investigations of those distant markets will doubtless be the display of the very latest in travelling bags, suit cases, toilet necessaries, and other articles appealing to business men.

Mercantile Summary

The Canadian Pacific Railway Company has placed an order at the Angus shops, Montreal, for another thousand box cars.

A fire at Dawson City starting in the Monte Carlo saloon, from an overheated furnace, caused a loss a few days ago at $15,000 to these premises: Reid & Co., druggists, $5,000; Arcade Building, $7,500; and about $15,000 or $20,000 more to other places.

A Winnipeg newspaper informs its readers that the Fort Frances Water Power and Electric Company, of which J. J. Backus, of Minneapolis, is the leading spirit, has let a contract for a $100,000 worth of the structural iron and steel to be used in the construction of its new plant.

In Boundary Creek district of British Columbia considerable interest is said to be felt in the oil lands of the Flathead Valley, and several people are said to have invested money in the prospects there. A company has been formed, under the name of the South-East British Columbia Land and Oil Company.

A Vancouver paper tells its readers that a Captain Power of that city, a master mariner of much experience, has perfected an invention which, he believes, will be generally adopted in shipbuilding. The plan is to have two large parallel holes or tunnels run from prow to stern, deep down in the ship's hold. By this arrangement the water will pass through these tunnels or tubes at a speed equal to the forward movement of the vessel. A steamer going at the rate of 15 knots an hour would give a 15 mile current through the tubes, and from these internal rushing streams the captain would derive power for heating, lighting and ventilating the ship.

The construction work in connection with the development of Kakabeka Falls is now said to be complete and electrical energy therefrom is expected to be in full operation at Fort William by June 1st next. The waters of the river are diverted into a large conduit pipe ten feet in diameter, which takes the water at a point three-quarters of a mile above the falls. This conduit pipe skirts the valley of the Kaministiquia River along a ledge of hills, to a point some distance below the falls, at which point a large forebay or reservoir is constructed to hold the water in reserve previous to its being taken in the steel penstock, which carries the water perpendicularly a hundred and eighty feet to the powerhouse below. The whole work has been carried out mainly with cement and steel. The initial installation will be ten thousand horse-power; this will be increased from time to time as required in units of ten thousand horse-power, until the whole of the power is developed at this point. The next step will be to conserve the waters of Shebandown and Dog Lakes, which, no doubt, will give all the power likely to be required in the future.

Canadian Pacific Railway Co.,

Issue of New Ordinary Capital Stock.

NOTICE is hereby given that pursuant to Resolutions passed at the Special General Meeting of Shareholders on 19th March instant, a new issue of the Ordinary Capital Stock of the Company to the amount of $2[illegible],280,000 in 202,800 shares of $100 each, will be offered at par to the ordinary shareholders of record at the closing of the books for the purpose, on the basis of 20%, or one share in five of their then respective holdings.

The Books of the Company will be closed for this purpose, in London, New York and Montreal at 3 p.m. on Friday, April 20th, and re-opened on Monday, May 7th, 1906.

The right to subscribe will expire at 3 p.m. on May 25th, 1906.

Payments will be received at the Bank of Montreal, London, New York, or Montreal, as follows:—

20% or $20 per share on subscription, on or before May 25th, 1906.

20% or $20 per share........July 26th, 1906
20% or $20 per share.......Sept. 26th, 1906
20% or $20 per share........Nov. 26th, 1906
20% or $20 per share........Jan. 25th, 1907

The new stock upon which all payments have been duly made as called for will rank for dividend for the half-year ending December 31st, 1906.

A circular containing the terms of subscription and enclosing warrants of subscription, will be mailed to the Shareholders after the closing of the books as above stated.

Dated at Montreal this 20th day of March, 1906.

BY ORDER OF THE BOARD,
CHARLES DRINKWATER,
Secretary.

The Montreal Steel Works, Limited, issued its annual statement the other day, from which it appears that business has shown a healthy growth during the year. Dividends of 7 per cent. on preferred and common stock were declared for the past year, and an issue of $100,000 worth of stock made for the purpose of extending the plant. The company's net earnings last year were $120,798.

An application has been made for a winding-up order in connection with the affairs of the Montreal business of B. Cohen, Limited, manufacturers of waterproof clothing. The company is a British corporation, with headquarters in Manchester, and a branch was opened in Montreal three years ago, which has been very much mis-managed by the person in charge. The English end of the business has been established some 30 years, with a favorable record.

The Grand Falls Power Company's plans for building dams and power and log tunnels, etc., on the St. John River at Grand Falls are meeting with objections from the lumbermen on the river on the ground that they would cause a back-flow which would result in a stretch of twelve or fourteen miles of the river being turned into a huge pond through which driving of logs would be difficult. The lumbermen also seek to have it determined whether, in dry seasons, the company must open its gates and give the lumbermen use of the water in the dam.

On the 20th several fires of minor importance took place at various places. At Fordwich, Ont., Walkey Brothers' furniture factory was completely destroyed, with a large stock of furniture. Loss $5,000, insurance $2,700. At Nashville, Ont., H. C. Card's general store was gutted, the loss being $2,500, with but small insurance. At Qu'Appelle, Sask., there was almost a conflagration, which destroyed the Furniture Company's warerooms, Webster's blacksmith shop, Hardy's general store, and injured the Massey-Harris warehouse and some others. The chief loss was to the first-named, of about $10,000, with $4,000 insurance. Morrison's general store and the Windsor Hotel, as well as several smaller buildings, in Wolseley, Sask., were burned, the total loss being $35,000; the insurance being only partial. A. L. Ross' sawmill and sash and door and blind factory at Cornwall, Ont., totally destroyed, loss $25,000, insured for only $6,000.

* * *

ELECTRIC POWER GROWING.

The growth in the use of electric railway machinery is remarkable. The fact that one concern in the United States has orders for 702 railway and tramway motors at a cost of a million dollars is an indication of the spread of the demand. The railway department at the works of the Westinghouse Electric and Manufacturing Company at East Pittsburgh has received within the last few days some extensive orders. The Metropolitan West Side Elevated Railway Company, of Chicago, which is making important additions to its rolling stock, has ordered an equipment of one hundred 160 horse-power motors and fifty equipments of unit switch control. It is only a month, we are told, since the same company ordered fifty-two motors of the same type. The Bluffton & Marion Construction Company, of Bluffton, Ind., has contracted for a complete installation of electrical apparatus for a power house to operate an entire railroad, along with thirty-two 50 horse-power motors. The Denver City Tramway Company has ordered sixty No. 101-F railway motors and the Pacific Electric Company has ordered eighty 75 horse-power motors for an electric railway in Los Angeles, Cal. An enormous order came from the Public Service Corporation of New Jersey, which amounted to 378 motors, varying in capacity from 40 to 75 horse-power. These are to be used to equip a number of new cars on the surface lines outside of Camden.

* * *

TORONTO MARKETS.

Toronto, March 22, 1906.

Chemicals, Drugs, Etc.—Little change has occurred since our last report. Opium is dull, but quinine a little stronger. Not very much actual business is passing, however. Baltimore advices say that the demand for chemicals and fertilizers is very good, better in fact than it has been for the past several years. The English export trade in chemicals keeps well up, though the home trade is not so flourishing.

Dry Goods.—The upward movement in cottons and woolen staples continues, though the advances are but fractional. The general trade is very good both in city and country, and the more seasonable weather the last week or two seemingly having brought about an improved feeling. The snow this week is likely to accentuate this, especially in the rural districts. On Tuesday there was a slump in raw cotton on the strength of a report by the Census Bureau showing the number of bales to be 10,697,013, compared with 13,697,310 for 1904 and 10,015,721 for 1903. The market had been very nervous before the report appeared and immediately afterwards May broke to 10.38c., and July to 10.48c. or about 36 points below the closing prices of yesterday. Bulls supported the market at the decline, which was followed by a reaction of 10 or 12 points, but sentiment was very unsettled during the late session with bears taking the aggressive. This means little, however, in respect to the values of finished goods at this early day.

Flour and Grain.—While $3.05 is asked for ninety per cent. patents the highest bid is no more than $3.00 and little business is passing as a result. Wheat is held slightly higher, but there is no great activity. Other grains are held nominally the same.

Hides and Leather.—Sheepskins are firmer but hides are unchanged, with a very slow movement. Leather keeps steady and there seems to be some improvement in the demand.

Groceries.—Sugars have advanced 10c. per hundred, and there is a very strong tone to the market. In New York also the firmness is very marked. In ordinary lines of general groceries there is no very strongly marked feature. A fair average trade is being carried on and prices keep quite steady. The dried fruits are meeting with considerable enquiry for this time of the year. Canned vegetables also are in good demand. Tomatoes are in request at the recently advanced prices and they are not in by any means plentiful suppply.

Live Stock.—Offerings at this week's markets both in the city and at the Junction were fair, but prices had an upward tendency somewhat. For good to choice exporters especially the enquiry was brisk. Most of the butcher's offered were of light to medium quality and grade, but all sold fairly well, with a keen call for good stock. Stockers and feeders also went early, sharing in the buoyancy for other cattle. Milch cows are wanted, when good, at from $40 to $60. The run of lambs and sheep was quite light, and prices were good.

Seeds.—Not much business has been transacted this week, the weather not having been favorable. Prices are held at high figures, alsike being $18 for extra fancy, alfalfa $16, timothy $5 to $6.

Wool.—Not much is doing in the local market, though prices, nominal as they are, hold firm in sympathy with the world's markets. At the last London sales there was another grading up of values.

The Great-West Life Assurance Company has never lost a dollar of principal or interest; has never shown a dollar's worth of Real Estate under foreclosure; has paid in full every estimate of profits on policies that have matured, and gives the security of a million dollars capital without cost to the Policyholders.

MONTREAL MARKETS.

Montreal, 21st March, 1906.

Ashes.—The demand is slow and offerings light. Anything like a moderate enquiry would probably stiffen prices, but in meantime we continue to quote first quality of pots at about $5.15; second pots, $4.70; No. 1 pearls about $7 per cental.

Cements and Firebricks.—The demand for cements continues to improve, and prices for delivery from store are steady at $1.90 to $2.10 for Belgian; English and Canadian, $2 to $2.20; firebricks, $18 to $23 per thousand, according to brand.

Dairy Products.—There are indications of increasing firmness in the cheese market in Britain, but locally there is an absence of any trading of consequence. Holders continue to quote from 13 to 13½c. per pound for choice grades. For the finer grades of creamery butter there is good demand, but under-grades are slow of movement. We quote 22 to 22½c. for choice; under-grades, 20 to 21½c. Good dairy is in request, and is quoted at 19½ to 20½c.; Manitoba dairy, 18 to 19c. per pound.

Dry Goods. — Travelling salesmen would like to see something more in the shape of settled spring-like weather than the present snow and chill winds, and do not report sorting business as particularly brisk. Retailers in the city are also disposed to complain somewhat, the weather conditions for some days past being as wintry as any during the season. Recent advices from British woolen manufacturing centres report much stiffening in values of textiles and there is an expectation of a revision of prices of domestic cottons.

Furs.—The London March fur sales are now on, having opened on the 19th inst. Cable advices received up to the moment of writing are as follows: At the Hudson Bay sale otter sold 12½ per cent. lower than last March; fisher, 5 per cent. lower; red fox, 10 per cent. higher; silver fox, 10 per cent. higher; marten, 35 per cent. higher; cross fox, 15 per cent. lower. At the Lampson sale, so far as reported, fisher sold 7½ per cent. lower; otter, 10 per cent. lower; cross fox, 10 per cent. lower. Montreal receipts of raw furs are but moderate at the moment, and the quality shows deterioration.

Groceries. — The only noteworthy feature of the week in this trade is a further advance in refined sugars of 10c. a cental on all grades, making the present factory price for standard granulated $4.20 in barrels, with the lowest figure in yellows, $3.75 in bags. The outside markets for raws are reported to show considerable strength, and the anticipation entertained in some quarters of further probable advance is stimulating the demand. The latest cable quotation from Barbadoes for new molasses is 14c., and few direct cargo orders have been placed as yet. Teas are dull, jobbers apparently only buying for present needs, but values in all lines are firmly held. Continued stiffening is reported in canned goods.

Hides.—There is no special activity in the hide market, but values are fairly firm on the basis of 11c. per pound for No. 1. Few new lambskins are yet coming in, and for these dealers are paying 10c. each. No. 1 calfskins realize 12c., and No. 2 ditto 10c. per pound.

Leather.—Quotations in this line continue quite as firm as a week ago, and some sole leather tanners claim that they are realizing better prices in Britain than hitherto. Experts in the direction named are quite liberal.

Metals and Hardware.—The several houses consulted in these lines of merchandise all report a very satisfactory demand, and consider that there is every reason to expect a brisk spring business, even although the movement has been better sustained than usual all through the winter. There are rumors of trouble again with the iron-moulders' union, but so far nothing definite has transpired in this direction. Pig iron prices remain as quoted a fortnight ago, $25 being asked for No. 1 Summerlee from store in small lots, while domestic brands are held at about $21.50. Bars are quoted at $2.05, and iron pipe at $4.39 for inch. The prices of plates and sheets are just as quoted last week. In general metals tin is firmer at 40 to 41c., and antimony at 18c., other lines the same as a week ago.

Oils and Paints.—Orders for spring delivery continue to come in very fairly, and active shipping will begin in ten days, when spring freight rates take effect. Values show little late variation. Turpentine is steady at 98c. per gallon in single barrels. Linseed oil, 54 to 55c. for raw; 57 to 58c. for boiled; castor oil, 8½ to 10c. per pound, as to quality and quantity. Fish oils are little asked for. Pure white lead is firmly held at $6; putty, $1.40 in bulk. Window glass very firm at $4 per 100 feet for first break.

CITY OF WINNIPEG

DEBENTURES

SEALED TENDERS addressed to "The Chairman, Finance Committee," and marked "Tender for Debentures," will be received at the office of the City Comptroller, City Hall, Winnipeg, Manitoba, up to 3.30 p. m. on FRIDAY, the 27th APRIL NEXT,

PROSPECTS OF THE YUKON.

The Hon. W. W. B. McInnes, Governor of the Yukon, is not one of those who believe that territory has seen its best days. On the contrary, far from being a "played-out camp," Mr. McInnes believes that the future of Yukon Territory will be incomparably greater than its past. The Governor believes it is approaching the time "when the prosperity of 1896 will be exceeded, and it will not be prosperity of the glittering tin-pot type either. The Yukon is not a place for one-man mining. It used to be considered so; in fact, it used to be so like every other mining place. But that order of things is gone. The hills of gold-bearing gravel are immense, and the methods employed in mining them are of the latest and best. There are five dredges there now, and seven more will be added next summer." Just as an evidence of the success that has been attained by dredging, he mentions that the Bear Creek dredge was put to work on the Boyle concession. That dredge, installed in position there, cost very nearly $300,000. It has a capacity to handle over 3,000 cubic yards per day. It was in operation a few days over one month, and cleaned up considerably over $100,000.

What the Government is working towards now is in the direction of greater security of tenure and consequent enhanced safety of investments, which already compare favorably with mining camps on the other side of the American line. Provision has already been made for the settlement of nearly all possible mining disputes without recourse to the law courts, by a simple means of arbitration. No man's claim can be contested except at the instance of the Crown, thus doing away with claim-jumping and guaranteeing title. Almost the most important question before the people of the Yukon is that of transportation, but this problem is being solved rapidly.

A matter which is of the greatest importance, not only to the Yukon, but to Canada generally is the serious loss of trade sustained by Eastern manufacturers and merchants by their not catering more systematically to the needs of this great territory, thus allowing a vast proportion of the trade to fall into American hands. This is a point which is being very ably advanced by Dr. A. Thompson, M.P., who complains that Canadian manufacturers are careless as to the quality and packing of their goods shipped to the Yukon, thus playing into the hands of their enterprising Southern rivals. As Dr. Thompson says, the Yukon produces little else than gold, the most desirable article in the world. The territory is willing and anxious to exchange it for first-class Canadian products, but she will not exchange it for inferior goods, not even though she have to pay far more elsewhere for what she wants. Canadians have everything in their favor for capturing this trade. The high protective tariff prevails, the Almighty has given the soil and the sunshine and the smile of fortune to produce the best products under the sun on Canadian soil. Klondike has the potent gold and must have goods, and there is no reason why Canada should not get the trade.

* * *

HOW A TOWN IS BORN.

It will seem curious to those who do not know how a great railway can positively cause "the desert to rejoice and blossom as the rose," to hear of the almost instantanous birth of new towns in our north-western country. A story about how such a town is "a gittin' borned," as Chandler Harris' darkey said, appears in the Manitoba "Free Press" of Thursday. The town in question is Kenvill, which is not in a desert by any means, but in the wheat centre of the Swan River valley, which is what used to be called the Square Plain district of Manitoba. But the railway company decided to give it a new name.

"It is situated ten miles south-west of Swan River, on the new Thunder Hill branch of the Canadian Northern Railway, and has a great wheat district to draw from, which is well watered. Kenvill is just starting out on the road to success, the steel having been laid in December last. The new town has an up-to-date general store kept by Chas. McCormick; livery barn and feed stable by Mr. N. Jameson; butcher shop, by Mr. Jameson; a fine big hardware store, 60 x 60, is in course of erection by the Morse Hardware Company, of Winnipeg, and the Massey-Harris Company will erect a large warehouse. Having gone over the ground and sized up the farming district they concluded that this point was important for their trade. Mr. James keeps an up-to-date restaurant. Messrs. Pilkington and Spicer contemplate the erection of blacksmith shop and repair shop."

So much for actual buildings. But now consider the expectations: "The town will put up a hall for public use. The farmers are agitating for a farmers' elevator of 80,000 bushels capacity, which is a necessity as this will be a great wheat shipping centre in the near future. The district already this year has shipped 100,000 bushels of wheat and there is a large increase in acreage for 1906. The Canadian Bank of Commerce will, it is said, establish a branch here. There is a vacancy for a drug store, doctor, veterinary, lawyer, machine shop, photographer, milliner and dressmaker." Thus the "Free Press" reporter, whose motto is: "To-day—not tomorrow. Towns furnished while you wait. Ordinary notices free; vacancies extra." They doubtless need, at Kenvill, Manitoba, a doctor and a veterinary. But they can get along a while without either lawyer or milliner.

* * *

PRICES OF COMMODITIES.

Dun's Index Number of the prices of commodities shows a fractional increase during the last month, and one of several points compared with a year ago. On March 1st it stood at 104,204, against 104,011 on February 1st, and 101,939 a year ago. These figures represent consumptive demands in the United States. Although a little change occurred in the aggregate during February, there was a general decline in almost every class of commodities, with the striking exception of the miscellaneous division, which not only neutralized the effect of other losses but provided a small net rise. The total in this miscellaneous class is higher than at any time in about thirty years, and the recent rise occurred chiefly in building materials. Aside from a moderate advance in meats most food products became cheaper, and it is particularly striking to note that the general level of prices is over 2 per cent. higher than on March 1, 1905, despite the fact that foodstuffs have declined about 6 per cent.

According to the Index Number of the London "Economist" a further slight setback has occurred in commodity prices. It declined 18 last month, and stood at the end of February at 2,304 as compared with 2,342 on January 1st. The materials most responsible for the slight decline were pig iron and cotton. Small decreases in tea and sugar were offset by greater stiffness in wheat and meat.

Managers and Underwriters.

The following summary gives the shipments of ore from Rossland district for last week:—Centre Star, 3,060 tons; Le Roi, 430 tons; Le Roi No. 2, 720 tons; O. K. (crushed), 30 tons. Total for the week, 6,840 tons. Total for the year up to date, 66,255 tons.

Advices received at the head offices from the C. P. R. car service department, Winnipeg, state that up to March 12 a total of 50,026,000 bushels of wheat and 3,706,000 bushels of other grains had been received at the various points along the western lines.

It has been stated that Mr. T. H. Lennox, M.P.P., for North York, would place before the Ontario Legislature a bill providing for an annual tax of $300 on all commercial travellers doing business in Ontario for houses outside the Province. And it is added that this will be done as a measure of protection and retaliation at the request of the commercial travellers of Ontario. Such an application of the Lex Talionis, however attractive it may seem to people who are aggrieved by the action of other provinces, would be unworthy of an enlightened body.

The Crown Life Insurance Company
Head Office: Toronto, Canada.
Offers These Advantages to Insurers:

Mercantile Summary.

J. M. Gardiner, of Chatham, Ont.. proposes, in conjunction with local and Detroit capitalists to establish an automobile factory at Chatham.

It is stated by W. H. Covert, of Grand Forks, B.C., that a California syndicate is proposing to invest capital in the Boundary district during the present year and perhaps to build a custom smelter there.

We learn that Mr. John Stuart, of the wholesale grocery firm of Stuart & Company, Hamilton, died suddenly on Tuesday last of pneumonia. He was 47 years of age and the son of Alex. Stuart, the city treasurer.

The Beattie Storage building at St. Mary's, Ont., has been damaged by fire to the amount of several thousand dollars. W. A. Fuller's hardware store at Tamworth, Ont., together with three or four other shops and residences, have been burned at a loss of something like $5,000.

From Quebec we learn of the assignment of J. C. Roy, who has been engaged in the shoe finding business for a year or so. He is a son of Charles E. Roy, formerly well-known in the shoe manufacturing line, who proved unsuccessful, and thereafter obtained a Government position, as inspector of weights and measures. The father is thought to have had some interest in the business. Liabilities are placed at $5,400.

Alexander & Law Brothers' flour mill at Brandon, Man., was on Sunday last in great danger of being destroyed by fire, though it was extinguished after a loss of $5,000 or $6,000, about half insured. The steamer "Sovereign," which plied between Montreal and the Lachine Rapids, and was owned by the Ottawa River Navigation Company, was burned to the water's edge at Lachine a few days ago, the loss being estimated at $50,000, and the insurance $40,000.

A despatch from Regina to the "Free Press" of Winnipeg, dated 14th March, says that agents of J. J. Hill are making large purchases of land in Saskatchewan for the Great Northern Railway, with a view to building its various branch lines from the boundary, and it is believed to be certain that the Great Northern will build into Regina city this coming fall. The plan is supposed to be part of a comprehensive scheme having for its view the building of a Great Northern trunk line from Lethbridge to Winnipeg, passing a few miles south of Weyburn, and tapping the wheat country from the south by branch lines running in a south-westerly direction. Mr. Hill has already tapped Frank and Lethbridge and now these two points are being joined up.

The Metropolitan Life Insurance Co.

(INCORPORATED BY THE STATE OF NEW YORK)

The Company OF the People, BY the People, FOR the People

ASSETS, $151,663,477.29

Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec, Ottawa.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395	per day in number of Claims Paid.
6,972	per day in number of Policies Issued.
$1,502,484.00	per day in New Insurance Written.
$123,788.29	per day in Payments to Policy-holders and addition to Reserve.
$77,275.94	per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave., New York City.

Amount of Canadian Securities deposited with the Dominion Governmen for the protection of Policy-holders in Canada, over $3,0000,00.00.

More Than $7,000,000.

Over and above premiums received, more than $7,000,000 has already been paid or credited to its policyholders by the

Canada Life Assurance Co.

SUN LIFE ASSURANCE COMPANY OF CANADA.

1905 Figures.

A Policy-Holder's Company

The North American Life Assurance Company has a Guarantee Fund of $300,000, of which $60,000 is paid up in cash. Interest is allowed on this paid up portion only. Policyholders thus obtain additional security of $300,000 and what is of greater importance, are assured of careful and conservative management as the Guarantors are liable for this amount. By the Company's Act of Incorporation, every holder of a participating policy in the Company, upon which all premiums due have been paid, shall have one vote in person for each $1,000 of insurance held by him. Policyholders are thus given a voice in the management of the Company's affairs. In short, it may be said that the North American Life is neither a Mutual nor a Stock Company yet possesses the advantages of both.

Home Office - Toronto, Ont.

THE LUMBER SITUATION.

It will be seen from our list of Toronto prices current this week that several items in the lumber column have been raised in price. The changes have not, as a rule, been made at one sweep, so to speak, but have been rather the gradual growth of many weeks' constantly increasing tightening of values. Even now, it should be remembered that the outside range of prices given is at present beyond their normal range. At the same time, considerable blocks of material have actually changed hands at these quotations, and there can be little doubt that the whole trend of values is towards that general level and probably even beyond it. The only unsettling feature of the situation is the fact that many people in the trade have as yet arrived at no adequate conception of the position of the market. For example some mills are selling their hemlock lumber at $15 or $16 per thousand, while others are actually disposing of their whole stocks at $13. And it need scarcely be explained to those who have a knowledge of the inner conditions of the trade that the former are not asking more than conditions warrant. At the same time it must be borne in mind that some of this latitude in prices is to be accounted for on the score of difference of quality. Much of the hemlock which enters this market is grown on rocky soil where it never attains to the size and grade of wood grown under more favorable circumstances.

It is scarcely necessary to recapitulate the causes which have conspired to bring about the present very high prices of lumber in this country. In fact, the same causes or some of them, have been at work, perhaps in a still more acute manner, all over the continent. First is the growingly insistent demand for lumber for building and other purposes. This is due directly to the great prosperity of the people, and the remarkable activity of nearly every branch of trade and commerce. In Ontario, some proportion of the firmer feeling is due to unfavorable lumbering conditions this winter, the paucity of snow and so forth. But beyond all these factors is the positively alarming diminution of the sources of supply for the raw material. The public, and particularly practical lumbermen, have now become acutely alive to the facts of the case; and steps are being taken by the several governments interested to remedy the matter. But the taking of steps now is very like locking the stable door after half of the horses have been stolen. Each year, as it goes by, shows more clearly the terrible waste that has taken place in lumber resources in the past; each season the cutters have to go further and further back, where not only are expenses higher, but the quality of the timber has a tendency to retrograde. Men in the trade in the United States now realize what is going on in the chief timber regions of their own country, but it is not so commonly known here. We refer to the fact that in the northern lumber belt, Michigan, Minnesota, and Wisconsin, the cut of white pine last year diminished 600,000,000 feet compared with the year previous, and that this falling off has been going on for years. In 1892 the cut was, roughly speaking, eight and a half billion feet: last year it was only 3,628,000,000. And, unless something very far-reaching is done and done at once, the next twenty years seems likely to record a similar state in Canada. What wonder then that prices are advancing by leaps and bounds?

The exports from Canada to Liverpool last month showed an increase, according to the records of timber-laden tonnage arrived, being 7,065 tons register compared with 6,250 tons in the same month of last year. Farnworth & Jardine's circular says:

> Business has been steadily quiet, but buyers have shown more disposition to operate, and considerable business has been done in contracting for next season. Imports continue moderate, the deliveries fair, and stocks generally are light; values on the whole are firm.

> Referring to Canadian woods they say as follows: Waney has not been imported; the consumption has been small, but

stocks are fairly moderate, and there has been more enquiry for shipment next season at firmer values. Square pine.—There is little enquiry, but stocks are light and values steady. Red pine is only in limited request. Oak—No arrivals; the deliveries have been small but the stock is light, and recent sales have shown improvement. Elm.—The demand is inactive, but stocks are moderate, and prices rule high. Pine deals.—There have been a few small arrivals by the liners, via St. John, N.B.; the deliveries have been satisfactory, and stocks are getting reduced to a more moderate compass; values are firm. Red pine deals.—There has been more enquiry and values are steady.

New Brunswick and Nova Scotia Spruce and Pine Deals.—The arivals to the Mersey during the past month have been 3,190 stds. against 3,350 stds. during the corresponding period last year, and largely on consignment. The deliveries have been fairly satisfactory; values have largely recovered from the weakness during the previous month, and are now steady; stocks are adequate under present conditions. Pine deals.—There has been a little more enquiry.

Birch.—Of logs the arrivals, chiefly Quebec wood, have been moderate; there is more enquiry and prices have advanced; stocks are light. Planks have arrived freely; the deliveries have been fairly satisfactory, but the stocks are increasing; values are unchanged.

British Columbia and Oregon Pine.—There have been no arrivals. The consumption of both logs and planks has been satisfactory, but the stock is heavy; values are firm.

* * *

CHEAP POWER FOR ONTARIO.

The city council and the board of trade of Guelph are deeply impressed with the necessity for cheap electric power, especially in Ontario where coal is expensive. They are also convinced that such a great national asset as the power of Niagara Falls would be practically worthless if controlled entirely by private capital and that no regulation can be framed sufficiently stringent to bind owners of existing franchises to supply power at reasonable rates. These bodies have joined together therefore in passing a resolution asking the Ontario Government to establish at once a power plant at Niagara Falls or to secure power from existing franchises for distribution to the reachable municipalities of the province.

The Hon. Adam Beck, who was the chief speaker at a public meeting convened to consider this important question, which, one may say, has been neglected to the point of jeopardy of the people's interests, dwelt on the immense importance to the manufacturers of western Ontario of cheap power. They had the energy, the thrift, the capital, the climate, the facilities, for transportation of raw material; none were better able to cope with business affairs, but yet much depended on the price of power. And he reminded his hearers that Winnipeg was actually providing 100,000 horsepower at $15 per horse power, as against the $35 to $50 per horse power asked in Ontario.

It is of very little use to the people for the cost of producing electric power to be small, if the price charged for it be as high as ever, yet this is what usually happens. Mr. Beck instanced a conspicuous case in Montreal, where it was known that power was brought ninety miles from Shawenigan Falls and delivered at the boundary at $15 per horse-power, the distributing company then taking it in hand and selling it at from $50 to $150 per horse-power. He also detailed the experience of the city of Montreal with the magnificent water powers of the St. Lawrence. At $40 per horse power, the original charge, there was a great saving to the smaller users in electrical power, but one company had gradually absorbed all the plants and franchises, raised the cost to $60 and $75 per horse power and from 8c. to 14c. per kilowatt, and was now paying 7 per cent. on a capitalization of 24 millions, when the investment was only 7 millons.

Mr. R. L. Torrance, in seconding the resolution in favor of the building of transmission lines by the Government, voiced the indignation which the public are now beginning to feel that heavy stockholders in the large Toronto power companies should refuse to give information demanded by the Government in its enquiry into such matters.

* * *

AN INTERESTING POINT IN INDUSTRIALISM.

A recent bulletin of the United States Bureau of Labor comparing the rates of wages paid in Great Britain, Germany and the United States during the last fifteen years, gives rise to an interesting train of reflection. Wages are expressed in rates per hour, so as to avoid so far as possible the differences arising from inequalities in the periods of daily labor and other conditions. A summary of various tabulations shows that the average rate per hour paid in twelve different classes of work in the year 1903 was 12c. in Germany, 17 1-2c. in Great Britain, and 35c. in the United States. The employments represented were those of blacksmiths, boiler makers, bricklayers, carpenters, compositors, hod-carriers, iron molders, general laborers, machinists, painters, plumbers and stone masons. As to the increase in the rate of wages, they are shown to have increased between 1890 and 1903, to the extent of 0.2531c. per hour in the case of Germany, 0.2226c. in the case of Great Britain, and 0.7210c. in that of the United States; or, in other words, 21.8 per cent. in Germany, 11.9 per cent. in Great Britain, and 20.7 per cent. in the United States. This of course represents average results in average industries; some industries have progressed considerably more and some less. In view of the remarkable rise of Germany as an industrial nation in strong competition with Great Britain, it is interesting to note how far the success of its rivalry has been due to the lowness of the wages its laborers have received, especially when with that is combined their highly trained scientific skill.

Another point that may be noted in this connection and may be of the greatest importance in considering the future of that rivalry is that German wages show a strong tendency to approach to a nearer parity with those of Great Britain. That is to say, that while the earnings of the British workman have increased considerably during the last fifteen years those of his German brother have increased still more rapidly. As with extending markets this is likely to become more and more the case, and as, also, with increasing competition abroad, British wages are likely to increase in a continued lesser ratio, it would appear probable that the day may come when, with wages in Britain and in Germany on a closer level, the competition between these two great industrial nations will be under more equal conditions, which seems to indicate the truth of the economic axiom of the fluidity of capital and labor, that the tendency of all industrialism as well as of other human factors is towards an equilibrium.

FINANCIAL REVIEW.

We present below a condensation of the monthly statement of Canadian banks for February, 1906. It is compared with the Bank Statement for the previous month, and shows capital, reserve, assets and liabilities, and average holdings of specie, Dominion notes, etc. The detailed statement appeared last week.

Canadian Bank Statement.

LIABILITIES.	Feb. 1906.	Jan. 1906.
Capital authorized	$102,869,666	$102,646,666
Capital paid up	85,958,202	85,802,587
Reserve Funds	60,188,472	60,023,932
Notes in circulation	$62,434,893	$60,986,610
Dominion and Provincial Government deposits	10,367,326	10,336,626
Public deposits on demand in Canada	149,621,785	151,722,684
Public deposits after notice	373,693,731	369,499,614
Deposits outside of Canada	45,824,676	47,191,637
Loans from other banks in Canada secured	969,743	731,768
Deposits made by and balances due to other banks in Canada	4,986,694	5,020,828
Due to agencies or other banks in the United Kingdom	6,299,379	5,154,883
Due to agencies or other banks in foreign countries	2,369,281	3,452,123
Other liabilities	14,718,507	13,903,102
Total liabilities	$671,286,098	$667,999,951
ASSETS.		
Specie	$19,469,879	$18,915,429
Dominion Notes	38,431,050	38,594,778
Deposits to secure note circulation	3,435,334	3,435,334
Notes of and cheques on other banks	22,268,632	23,044,834
Loans to other banks in Canada, secured	969,736	731,759
Deposits with other Banks in Canada	6,665,985	6,933,229
Due from agencies or other banks in the United Kingdom	10,362,521	6,324,571
Due from Banks or agencies in foreign countries	16,143,335	17,923,617
Dominion and Provincial Government securities	8,699,789	8,694,021
Other securities	61,219,589	60,623,180
Call and short loans on bonds and stocks in Canada	55,591,764	54,241,565
Call and short loans elsewhere	62,353,020	68,432,836
	$305,610,634	$307,895,153
Current Loans in Canada	$458,706,908	$451,207,327
Current Loans elsewhere	37,462,194	37,283,534
Loans to Dominion and Provincial Governments	2,167,413	2,006,489
Overdue debts	1,778,063	1,771,370
Real estate other than bank premises	713,729	664,083
Mortgages on real estate sold	481,449	502,142
Bank premises	11,945,821	11,720,650
Other assets	9,651,937	9,908,510
Total assets	$828,518,332	$822,959,451
Average amount of specie held during the month	18,412,627	18,427,212
Average Dominion notes held during the month	38,488,723	36,925,970
Greatest amount notes in circulation during month	63,911,481	69,423,235
Loans to directors or their firms	9,011,032	9,194,198

In the figures for capital and rest there are this month no changes of any moment. Notes in circulation have followed their usual course and after reaching at the end of January the minimum for the season, have begun the upward movement which, with a temporary re-action in April, will no doubt continue until October. The increase this year is $1,448,000; in February, 1905, the increase was $807,000; in 1904, $763,000, and in 1903, $706,000. The total amount of notes in circulation at the end of February was $62,434,000 as compared with $58,828,000 in February, 1905, an increase for the year of $3,606,000. The banks showing the chief increases are:

Bank of Nova Scotia	$ 351,000
Bank of British North America	260,000
Union Bank of Canada	385,000
Canadian Bank of Commerce	820,000
Royal Bank of Canada	264,000
Sovereign Bank of Canada	290,000

The Bank of Montreal shows a nominal increase of $738,000, but as during the year it absorbed the People's Bank of Halifax, which in February, 1905, had a circulation of $908,000, the figures represent a real decrease of $170,000.

Deposits in Canada payable on demand show a decrease during the month of $2,100,000, and those payable after notice an increase of $4,194,000, being a net increase for the month of $2,094,000. In February, 1905 there was a net decrease for the month of $1,117,000. Total public deposits in the chartered banks of Canada are now $523,315,000; in February, 1905, they were $450,115,000; in 1904 $397,254,000 and in 1903, $366,682,000, the increase for the twelve months ending 28th February, 1905 being considerably greater than for the corresponding period in either of the two previous years.

Of the $73,000,000 growth since February, 1905, $15,451,000 is in the figures of the Bank of Montreal. Other banks showing increases of $3,000,000 and over are:

	Increase.
Bank of Toronto	$ 4,740,000
Merchants Bank of Canada	6,164,000
Union Bank of Canada	3,582,000
Canadian Bank of Commerce	5,725,000
Dominion Bank	3,598,000
Bank of Ottawa	4,624,000
Imperial Bank of Canada	3,266,000
Sovereign Bank of Canada	3,518,000

Amounts due to agencies or other banks in the United Kingdom now stand at $6,299,000, being an increase during the month of $1,144,000, and during the year of $3,002,000. The more important balances are those of the Molsons Bank, $602,000; the Union Bank of Halifax, $587,000; the Royal Bank of Canada, $937,000; the Traders Bank of Canada, $607,000; and the Sovereign Bank of Canada, $1,341,000.

Total liabilities have increased during the month by $3,286,000. In February, 1905, the increase was $421,000, and in February 1904, $3,153,000.

On the assets side specie and Dominion notes held show practically no change. The amount due from agencies or other banks in the United Kingdom has increased from $6,324,000 to $10,362,000, the principal changes being in the balance of the Bank of Montreal, which has risen from $1,176,000 to $3,485,000, and in that of the Canadian Bank of Commerce, which shows an increase from $3,274,000 to $5,544,000.

Call loans in Canada have increased by $1,350,000, while those elsewhere have fallen from $68,432,000 to $62,353,000, a reduction of about $6,000,000, $2,261,000 of this being in the figures of the Bank of Montreal, and $1,582,000 in those of the Canadian Bank of Commerce.

Current loans in Canada continue to grow and this month $7,499,000 has been added to the total, which now stands at the large figure of $458,706,000. In February of each of the last three years the figures have been:

	Current Loans.
1903	$331,646,000
1904	389,627,000
1905	414,233,000

This represents an increase in three years of 38 per cent. During the same time public deposits in Canada have increased by 42 per cent. The increase of over $7,000,000 during the month is fairly well divided amongst the different banks, the only exceptional individual increase being in the figures of the Merchants Bank of Canada, which have grown by $1,086,000. Total assets have increased from $822,959,000 to $828,518,000, being $104,741,000 more than in February, 1905. This certainly is a most extraordinary record, even for a year of unexampled progress.

* * *

THE USE OF FIRE GUARDIANS.

The chief of the Massachusetts District Police, Mr. Joseph E. Shaw, gives the first annual report of that body, being for the calendar year 1904. Curious to relate, the number of "unknown and incendiary" fires in the State was greater in 1904 than in 1903. And Mr. Shaw appears to suggest that insurance agents must have been permitting over-insurance, "thereby offering inducements to swell the number of incendiary fires." He says, moreover, that the number of men assigned to the duty of investigating fires is insufficient to do it properly.

The total number of fires occurring throughout the State during the year was 4,844, of which there were 3,661 in frame buildings, 1,066 in brick buildings, and 117 other than building fires. The loss on the same was $6,451,093, the sound value of the property damaged by fire was $117,806,522; amount of insurance at risk on same, $96,267,017; insurance loss paid, $5,238,209. Of the total number of fires, 242, or nearly five per cent., were of incendiary origin. The total sound valuation of property damaged by incendiary fires was $1,951,146; total insurance covering same, $1,656,236; total loss on same, $450,677; insurance loss, $359,479. Two hundred and eighty-one fires were of unknown origin.

The number of fires in the city of Boston during the year was 1,305, of which 631 were in frame buildings, 649 in brick buildings, and 25 were other than building fires. The total value involved was $28,256,827; insurance, $22,677,514; total loss, $2,311,121; insurance loss, $2,099,761. Of the total number of Boston fires 33, or 2.52 per cent., were incendiary. The loss was $33,933; insurance loss, $31,133.

It is of particular interest to observe that the number of arrests for burning and arson during the year 1904 was no fewer than 79, which is about thirty per cent. of the number of incendiary fires. There were 54 convictions, making the percentage of convictions to arrests 70. Besides these, ten persons were indicted and held for trial.

Of the 33 incendiary fires in the city of Boston, 15 were caused by maliciousness, 8 set for the purpose of obtaining insurance, 4 caused by drunken persons, 2 caused by revenge, 1 by thieves, and of 3 the authors were unknown.

Of the 209 incendiary fires occurring outside of Boston, 65 were caused for the purpose of obtaining insurance, 86 caused by maliciousness, 19 by revenge, 2 were due to pyromania, 1 set by thieves, 4 by tramps, 1 by intoxicated person, and the causes of 31 were unknown.

By an act of the Legislature of the State (chapter 433, sections 1, 2, 3 and 4) the powers and duties of the Fire Marshal's Department were transferred to the detective department of the District Police, and placed in charge of the able and efficient officer, George C. Neal, deputy chief of the detective and fire inspection department. Said act became law June 8th, 1904, giving to the members of the fire inspection department all the powers and duties of detective officers, as well as that of fire inspectors. This, in the opinion of Mr. Shaw, was a move in the right direction, as it clothed them with authority to serve subpœnas and precepts of the court, investigate fires, and perform such other detective duty as might be assigned to them by the executive officer. It also provides that the chief of the department may detail detective officers for the investigation of fires. In addition to this, the Legislature of the same year passed an act (chapter 370, sections 1, 2, 3 and 4) transferring to this department all the powers conferred on city councils and selectmen of the towns to regulate the keeping, storage, use, manufacture or sale of gunpowder, dynamite or other explosives, and inflammable fluids. "The operation of this law has been such as to entail a vast amount of labor, in addition to this investigation of fires; and when we take into consideration the very limited number of men which constitutes the detective department, and the various duties they are called upon to perform, it is surprising that so much has been accomplished."

Chief Shaw moralizes thus upon the carelessness of the public:

> "It seems to be the inclination of the average person who is insured to depend entirely upon his insurance to cover any loss that may happen as the result of fire upon the premises insured. I believe that the average person would exercise much more care to prevent fires occurring, did he not know that the insurance company would make good his loss. I have so many examples of carelessness regarding fires that I feel it my duty to call attention of the public generally to their negligence in this direction; and if the advice were heeded, many accidental fires would be prevented. For instance, the use of swinging gas brackets near lace curtains with the window open to the breeze; the use of wooden cuspidores; the careless use of matches and of kerosene; and various other means by which accidental fires occur. The average person waits until a fire occurs before being warned of his carelessness. His duty to his neighbor as well as to himself demands the utmost care to prevent a fire waste. I would recommend that in every household some means of subduing an incipient fire be provided, such as hand grenades or an extinguisher. This would oftentimes prevent a serious conflagration. The expense is trifling, compared with the annual loss."

* * *

EXPORT STATISTICS AGAIN.

A matter was brought up in the House of Commons on Friday last to which the attention of the departments of Customs and of Trade and Commerce has repeatedly been called by The Monetary Times. This is the anomalous showing made in the Trade and Navigation blue books of the places of origin of manufactured goods exported. For example: In the Blue

Book of 1904, the values of imports and exports of four Canadian cities are thus given:

	Imports	Exports
Montreal	$80,561,275	$67,844,729
Toronto	47,671,288	3,150
Hamilton	9,328,014	586
Brantford	2,108,119	nil.

Any Canadian business man knows that such a statement of the exports of the three Ontario cities last mentioned cannot be correct. Why, then, are not the exports of these cities credited to them? It is explained by the Ottawa authorities that

> "all export entries are delivered at the frontier port of exit, and the totals thereof are credited to the respective ports where the goods pass outwards from Canada."

And they also tell us that explanatory notes conveying this information are prefixed to the Return. Let us see what one has to do if he would get at the exports say of London, or Ottawa, or Peterboro, or any of the inland cities named. He cannot get at them—he may approximate them, something after this fashion: Hamilton's products naturally go to Bridgeburg, on Niagara River, and on looking up we find that insignificant place credited with $4,234,218 of exports, (and last year with three times as much) while Hamilton has $586 only! Similarly, according to this method of registry, Toronto exported in twelve months only $3,150 worth of goods—but Niagara Falls is credited with $18,071,625 worth; hence clearly Toronto's manufactures are credited in part to Niagara Falls, because entered outward there instead of at the Toronto Custom House. It is not only misleading and unjust to our manufacturing cities, but absurd, unless means are taken by the compilers of the Blue Book to show elsewhere the real places of origin of our exports.

Several members, notably Mr. Cockshutt, of Brantford, Mr. Bergeron, Mr. Taylor, Mr. Hughes, commented in the House on this state of things, so confusing to the stranger who looks for statistics illustrating the inward and outward business of our inland cities. Mr. Cockshutt pointed out that only an extra clerk or two would be needed to publish properly the information they already have in their hands, to trace the manufactured or other merchandise exported by each city, and asked the Minister of Customs to appoint them. But he got for his reply only the statement that the Minister

> "quite understood the difficulty and perceived that each town would like to be credited with the goods it originates, but after all we thought it was better to do away with the provincial subdivisions and all that sort of thing. This is the Dominion of Canada, and if goods go out of this country, they are exports of the Dominion of Canada."

* * *

—The first steamer to be put on the recently inaugurated service between New Zealand and Vancouver will be the "Bucentaur," a vessel of 6,000 tons. She is expected to arrive in Auckland on April 10th, and after making calls at some other New Zealand ports, will leave there again for Vancouver on April 30th. Other first-class vessels are to follow at intervals of two months. The company which is carrying on the service is the New Zealand and African Steamship Company, and the Auckland portion of the new business will be conducted by Mr. Th. de Schryver, managing director of the Imperial Export Company of Canada, Limited, Toronto, known by his correspondence to the readers of The Monetary Times. The inauguration of such a service between the Dominion and these important islands of the Southern Pacific known as New Zealand, should be a source of congratulation to both countries. Trade between them at present is small, but, seeing that they are in many respects complementary to one another, it is now likely to show marked growth, and we hope it will.

* * *

THE PRESS UPON COMMERCIAL HONESTY.

A jury at Cobourg assizes has just found for the "Globe" newspaper in a case where that journal was sued for libel by a fruit dealer named Coyle. The newspaper had obtained from one of the Ottawa departments, and published, some information which reflected on Coyle as having transgressed the Fruits Marks Act by packing apples and marking them fraudulently. The judge charged that this information was not privileged—which is a state of things that should be rectified; at the same time he took occasion to dwell upon the importance of honest dealing to the country, declaring that "a man pays too high a price for his wealth, more than a hundred cents on the dollar, if in his effort to enable him to get wealth he sacrifices his character." The result of the trial is a vindication of the rights of the press when it seeks to uphold the commercial honesty of a community and to expose wrong-doing on the part of greedy men. "The Globe" is entitled to congratulation for the stand it took and upon the result of the trial. But there needs to be some alteration in the law if it is correctly interpreted by Mr. Justice Clute to mean that newspapers may not make use of information derived from a Government report intended for the public without risk of a law-suit for damages.

* * *

BANK OF BRITISH NORTH AMERICA.

The circumstances under which the satisfactory position and earnings of the British Bank for the calendar year 1905 had been brought about were recited by the chairman of the meeting, Mr. Wallis, on 6th March. Dulness and low rates for money in New York succeeded by activity in September at profitable rates, business in Canada throughout the year almost universally prosperous—the lumber trade improving, salmon canning industry prospering, dairying showing excellent results, mining exhibiting an advance, the wheat harvest of the prairie country most remarkable. All these factors served to increase the chances of the bank to make money and advantage was taken of them, of course. We note a sentence in the speaker's remarks as to the climate of British Columbia being appreciated by the better class of the United Kingdom, resulting in families with independent means arriving and taking up land.

The bank's deposits continue to increase; reaching now the sum of $20,094,061, an increase of some two millions over 1904. And circulation, which was $3,017,607 twelve months before stood at the close of 1905 at $3,368,577, although at times during the year it had exceeded this amount. The addition of $97,333 to reserve brings that fund up to $2,141,333, or forty per cent. of the paid capital.

One marked feature most creditable to the administration of the bank, which has now passed its seventieth year, is the solicitude shown towards its employees. We find in this account for 1905, after setting aside so much for bank premises account and so much for reserve fund, there is $2,500 placed to Officers', Widows', and Orphans' Fund, $2,951 to Officers' Pension Fund, and $973 to Officers' Life Insurance Fund. Surely such loyalty in contributing to the comfort of its employees cannot but help to engender loyal service to the bank.

OUR AUSTRALIAN LETTER.

The Australian Federation is justifying itself from a commercial point of view if from no other. The inter-state exports of the Commonwealth last year amounted to £37,448,833 being an increase over the previous year of £4,350,779. This is not yet equal to the oversea exports which are placed at £56,750,357, but they are steadily creeping up and the internal trade of the Commonwealth is likely to be equal to the external.

The New Zealand Government has made the experiment of borrowing money in Australia, and effected a loan for half a million sterling in Melbourne the other day, but it had to pay 4 per cent. for it. It borrowed another half million at the same rate from an Australian life company. This is rather a heavy rate for so prosperous a colony, but the English money market has looked askance at New Zealand securities for some time. Some doubt has been expressed as to the accuracy of New Zealand bookkeeping, which has been aided by a recent discussion respecting the management of its railways. A New Zealander has charged the Government with manipulating the accounts by charging ordinary expenses to loan account and stuffing the receipts. He has asserted that if the accounts were properly kept the railways would actually show a deficit. His contention has not been fully answered and is somewhat borne out by the increase in expenditure of the railways from loans. In about ten years the mileage opened has increased by less than 18 per cent., while the capital expended has increased by 41 per cent. New Zealand is rather "going the pace." Its debt has nearly doubled in twenty years and its net debt is equal to $320 per head of the population. The taxation of the people has had to follow suit and has been increased by nearly one-third in ten years. It is a wonderful country; but a good deal of its prosperity is due to the expenditure of borrowed money and even in New Zealand this cannot last for ever.

The State of Victoria has floated at home even a larger loan, for £1,600,000, at somewhat better terms than that of New Zealand, but costing over 3½ per cent. This indicates the prosperous condition of Australian finance, but also unluckily it shows the nervousness of Australian capitalists in expending their money in the development of the country. In a new country such as Australia is with so many virgin resources, money should bring a better return, and the security be quite equal to that of a Government loan.

The Australian wool season lasts until June next, but it is pretty well over. Up to the end of last month the export from Australia was 1,163,570 bales, and from New Zealand 218,808. This is an increase of 206,290 bales for Australia, but a decrease of 1,580 from New Zealand. Considerable quantities of wool continue to come in, and the last local sales brought the best rates of the season.

The high prices for minerals is stimulating their production, and the result has been that the output for last year in New South Wales of all minerals showed an increase of £626,176. The total value of last year is reported at £7,017,940. This increase has been shared by nearly all the metals and coal. The wide variety of the minerals of this State is shown by these returns. In the productions is included gold, silver, copper, lead, tin, zinc, antimony, bismuth, iron, platinum, scheelite, wolfram, molybdenite, and in precious stones diamonds to the value of £3,745 and opal to £59,000.

Reports from New Zealand show that the Government has placed a large contract for pipes with the Canadian Wooden-pipe Company. It appears that two Canadian companies, besides others from abroad, were competing for the contract. One had as good an agent as could be found in the colony, and the other sent an expert to New Zealand, and the company represented by the expert secured the contract. This illustrates the importance of being represented by a man who knows all about the business, particularly in the introduction of an article.

Canadian trade is increasing steadily with New Zealand, if not with great rapidity. One agent sold last year nearly three quarter of a million dollars worth of Canadian goods. Beyond that are other sales of very large concerns. Commission men complain that Canadian firms are not dividing the preferential tariff with their customers of New Zealand and that they will sell goods advantaged by this tariff to Australia cheaper than they will to New Zealand. This may be so in some instances, but it would be pretty hard to keep Canadian goods sold for Australia out of the New Zealand market, and the complaint need not last very long.

The New Zealand trade for 1905 shows an unexpected condition. It was presumed that the exports for 1905 would be slightly below those of 1904, and that the imports would somewhat increase. As a matter of fact it has been the other way, the exports having increased by £907,599, and the imports decreased by £446,943, the actual figures being:—

	1904.	1905.
Imports	£13,291,634	£12,826,691
Exports	14,748,348	15,655,947
Excess of exports	£1,456,714	£2,829,256

F. W.

Sydney, New South Wales, 19th February.

* * *

DRESDEN BOARD OF TRADE.

At a meeting called on Friday night last by the Mayor of Dresden, which proved to be a crowded one, the Dresden Board of Trade was reorganized, the principal officers being R. Aiken, president; W. Ward, vice-president, and G. E. Weir, secretary-treasurer. We find, on referring to the list of Canadian boards of trade which we compiled in 1896, Mr. R. Aiken was president of the Dresden Board of Trade of that day, and Mr. J. H. McVean was the secretary.

* * *

BANKING AND FINANCIAL.

Messrs. Geo. A. Stimson & Co., debenture brokers, Toronto, have just, we are told, purchased $22,000 Local Improvement 5 per cent. debentures of the town of Sturgeon Falls, paying the highest price for them.

We understand that Mr. F. W. Broughall, who has been with the Dominion Bank for years and has passed through almost all grades in that institution, has been appointed general manager of the new Sterling Bank.

Who will venture to say that an Old Country financial journal does not joke? We find the following in the "Financial News" of London, England, entitled, "A new Chestnut." Lady at dinner:—What do you think of Balzac? Jewish Jobber:—I really have no view: I only deal in Kaffirs.

The Union Bank of Halifax is having its jubilee this year in more ways than one. Shares of this bank have advanced in value recently almost at the rate of a point a day, having gone up thirty points in a little more than a month. The stock is now quoted at 182, with a great demand for it, and very little offering for sale.

In the item we copied last week from the "Summerside Journal," it was stated that the fittings of the Bank of Nova Scotia's new building in that town were made by the London Office & Specialty Co. We now learn that this was an error, for the fixtures of that office were the product of the Canadian Office & School Furniture Co., Limited, at Preston.

Among the new corporations mentioned in this week's Ontario "Gazette" as having received charters in the Empire Securities, Limited, Toronto, the share capital of which is $100,000. It will purchase, hold, deal in, sell and lend upon debentures, stocks, bonds, or other securities of the Dominion or Provincial Governments or of "any former provinces now forming part of the Dominion of Canada" or of the United Kingdom, or Newfoundland, or the United States, or of municipal or school corporations in the above countries, also of chartered banks or companies. D. W. Livingstone, of Toronto, is one of the prominent members.

According to a decision laid down by the New York Court of Appeals, a stock broker is bound to give a customer formal notice of the time and place of the sale of stock held on margin for such client, or he cannot recover any loss which he may sustain in the transaction. The decision is considered one of great importance, as it establishes a new rule of law in stock transactions.

On Saturday last, the new down-town office at Sherbrooke of the Eastern Townships Bank, corner King and Wellington Streets, was opened for business, with Mr. G. W. Briggs, manager, in charge. The aim of the directors in opening this branch has been to give more convenient banking facilities to the bank's customers in the south and west Wards, and to those in the immediate locality. The premises are fitted up with great convenience and neatness.

The appointment was made last week of Mr. T. S. C. Saunders, for some time past assistant inspector at the head office of the Bank of Montreal, to be manager of the branch which that bank is about to open in the city of Mexico. It is understood that while Mr. Saunders will be the head of the Mexican branch, a number of local men, conversant with the language and customs of the country, are also being engaged as members of the staff.

It is announced that the new issue of Canadian Pacific Railway stock will be offered at par to shareholders of record April 20, who may take one new share on each five shares held. The right to subscribe will expire on May 25. Payments will be $20 on subscription and 20 per cent. on July 26, September 26 and January 25. New stock, upon which all payments have been duly made, as called for, will rank for dividends for the half year ending December 31, 1906.

From Windsor we hear of the appointment of Mr. Dugald McGillivray, manager of the branch of the Bank of Commerce, at that point, to be manager at Halifax. E. P. Gower, manager of the Berlin branch of the bank, succeeds him at Windsor. Mr. McGillivray has been a good many years in the service of the Commerce. He was accountant at Toronto branch, which post he left to manage the Walkerton branch, going from there to Windsor some three years ago. He is a competent banker and a public-spirited citizen. It should be added that Mr. H. N. Wallace, formerly general manager of the Halifax Banking Company, and whom Mr. McGillivray succeeds in the charge of the Commerce branch in Halifax, is a very experienced banker and business man, who is now made chairman of the local board of the Bank of Commerce.

LIFE INSURANCE.

At the close of twenty-three years' trading the Scottish Temperance Life Assurance Company can point to an accumulated fund in the life department exceeding one million sterling. The addition made to the life insurance fund in 1905 was £116,788, bringing the fund up to £1,099,546. Steady growth and continued progress and prosperity mark the history of the institution, and probably few companies can produce so satisfactory a record of mortality experience as was recorded at the last valuation. Then it was found that the claims in the temperance section were only 42 per cent. of the number expected by reference to the Institute of Actuaries table, while in the general section they were 71 per cent.

FIRE INSURANCE.

A Walkerville firm, W. E. Leagrave & Co., has been awarded the contract for supplying a combination chemical and hose wagon for the London fire department.

A cable from Germany on Saturday last states that the municipal authorities of Berlin are about to initiate an experiment in the use of motor fire engines in that city. Experiments in this direction having already been made in several other German towns. At Hanover it was found that the annual cost of maintaining such a fire engine amounted to only $500 as compared with $3,000 required to maintain a fire engine drawn by two horses. It was also found that the motor fire engine could leave the fire station more quickly and reach its destination with greater speed than the older type of engine.

The Boiler Inspection and Insurance Company of Canada held its annual meeting on 21st March in Toronto. New directors were chosen to the board in the persons of Messrs. Arthur L. Eastmure, Francis J. Lightbourn and J. F. Smith, K.C.. The new board is constituted as follows:—J. L. Blaikie, president; Arthur L. Eastmure, vice-president and managing director; E. W. Rathbun (Deseronto), Francis J. Lightbourn, W. B. McMurrich, K.C.; J. F. Smith, K.C.; and J. D. McMurrich. The chief engineer is George C. Robb; secretary-treasurer, H. N. Roberts. This company is the oldest institution of its kind in the Dominion, having been over thirty years in business. Its operations confined strictly to the inspection and insurance of steam boilers, have been very successful.

In an up-to-date paper on burglary, read before the Insurance and Actuarial Society, of Glasgow, Mr. James B. Gibson, C.A., of the Ocean Accident, referred to three curious misconceptions which obtain on the other side of the Channel. These are, the burglars confine their attention to unoccupied houses; that their industry is limited to the acquisition of gold and silver alone, and that they never, when extending strict attention to business, perpetrate wanton and malicious injury. For the very best of reasons these misconceptions are not articles of faith in Ireland, as an Irish burglar will seize on anything which comes his way, even to a cross on the back of an ass. It strikes us, that the lecture was a shade too practical, as we note the various tools of burglars were on exhibition at the meeting.—"Insurance and Finance Gazette," Belfast.

FOR GROCERS AND PROVISION DEALERS.

A despatch from Aylmer, Ont., dated 23rd March, stated that David Marshall, general manager of the Canadian Canners, Limited, who has been in the canning business for twenty-three years, had resigned.

An agitation is on foot among the farmers of the Thames Valley, who devote considerable attention to beet growing, to establish one or more sugar factories at Chatham or Dresden. There was formerly a factory at the latter place, we believe, but it was removed to Wisconsin.

From the Dominion Government's hatchery at Harrison's Lake, B. C., there will be turned out in a few weeks' time some 29,000,000 sockeye salmon fry. They will be started towards the sea and are scheduled to return to the Fraser River in four years. The fish are about three inches long and in apparently robust health. The fish will also be released shortly from the Provincial hatchery at Seton Lake. The experiments are being watched with great interest.

DRY GOODS NOTES.

In Dundee, Scotland, five jute mills, employing about 2,300 hands, which have been closed down for some weeks or months, have now resumed operations.

The Oxford Knitting Company, Limited, Woodstock, Ont., has been granted a charter by the Ontario Government authorizing it to manufacture and deal in knitted goods. The share capital named is $50,000. Among the provisional directors are John White, dry goods merchant of Woodstock, and E. W. Nesbitt of the same place.

The United Collar Company, of Canada, Limited, has been granted a charter by the Dominion Government. It proposes to manufacture and sell collars, shirts, men's furnishings, boots and shoes, all sorts of dry goods, act as furriers and dealers in cotton, linen, and woolen goods. C. B. Kelly and A. M. Bilsky, of Montreal, are among the charter members. Capital stock authorized is $150,000.

TRADE ENQUIRIES.

The following were among the enquiries relating to Canadian trade received at the Canadian Government Office, 17 Victoria St., London, S. W., during the week ending 17th March, 1906: A London firm of wholesale and export saddlers wishes to appoint agents in Montreal, Toronto, Winnipeg, and other Canadian centres on commission terms. An Edinburgh firm with a large connection for the sale of split peas would correspond with Canadian shippers. A London firm manufacturing tins for packing butter, preserved fruits, potted meats, etc., hopes to get into touch with Canadian users.

From the City Trade branch, 73 Basinghall St., E. C., the following: The Johannesburg (South Africa) branch of a London firm wishes to obtain the agency of a first-class British Columbia packer of tinned salmon for South Africa. A Liverpool firm handling nuts, fruits, spices, ginger, chillies, etc., wishes to get into touch with Canadian importers.

* * *

THE HOME BANK OF CANADA.

Coming eastward along King Street towards Yonge on a sunny day, and looking at the buildings on the north side, the white facade of the new Home Bank head office building makes a striking contrast with the greys and brickreds of other buildings before and beyond it. It is undeniably handsome, with its tall Ionic pillars and its exterior gates, and has the exceptional and substantial appearance that one's mind somehow connects with the homes of financial concerns. Indeed it is a good specimen of modern concrete construction. At the beginning of the present year the doors of the new building were opened for business. But the Home Bank was not entirely a new-comer into the banking field. For many years it had virtually existed as the Home Savings & Loan Company on Church Street, and had a large clientele; but as our readers know it received last year a charter to do general banking business, and has at the present time three branches in Toronto and others in the province of Ontario.

The interior of the building is not gaudy but substantial, with a vaulted ceiling in the banking room and chambers in the rear for a directors' room, offices for the general manager and the manager of the Toronto branch. The receiving and paying tellers' cages are all fitted with the latest safety ideas. In the basement cloakroom accommodation and other comforts and conveniences for the staff are provided.

Having between $3,000,000 and $4,000,000 to take care of for some nine thousand depositors, substantial construction was obligatory. Concrete has been largely used and the great treasury vault with its time locks has been constructed with the Holmes electric burglar call service attached. In the massive concrete door are heavy steel lock bars six inches apart and running vertically as well as horizontally. Inside this again are two big burglar-proof safes. Close beside is the book vault, equipped with steel cabinets and steel book trucks for moving the heavy ledgers and office records.

The design and workmanship of the interior fittings deserve a word of notice. The Office Specialty Co. produced the furniture and the fittings of the vaults, while the Canada Foundry Company did the grill-work of the various tellers' boxes. The board of directors of the Home Bank includes Eugene O'Keefe, of the O'Keefe Brewing Company; president, Thomas Flynn, of L. Coffee & Company, grain dealers; vice-president, E. G. Gooderham, of the Toronto Silver Plate Company; M. J. Haney, civil engineer and contractor; Colonel John I. Davidson; Parkyn Murray, of W. A. Murray & Company, Limited, and Lieut.-Col. Mason, general manager, who has been manager for so many years of the Home Savings & Loan Company.

OUR HALIFAX LETTER.

Halifax is in the full tideway of immigration, and the landing of shiploads of Europeans has come to be a familiar scene now; but not often has such an interesting party of new citizens arrived here as the thousand and more of the Salvation Army party that arrived by the steamer "Kensington" recently. They compose the first phalanx of an army of immigrants sent forth under the auspices of General Booth. No finer body of settlers has ever arrived here, probably since the first shiploads of Scotch, English and Irish came out a century and a half ago. Sixty-five per cent. of the party were agriculturists, who will settle on the land; fifteen per cent. mechanics; ten per cent. clerks and laborers, and ten per cent. domestic servants. They were selected out of more than 100,000 applicants. Their arrival attracted much attention here as they were a particularly fine body. The domestic servants were eagerly enquired for.

There has been a certain amount of liquidation in the stock market recently incident to the payment of the first call on the new issue of Royal Bank stock. The majority of this stock is held in Halifax, and many investors in order to take up all their new allotment have disposed of other securities. This has caused a somewhat easier feeling in local stocks temporarily. There is no scarcity of capital for investment in this locality, but perhaps unfortunately it is confined largely to bank stocks. New industrial propositions are not seized upon very readily.

The Halifax Board of Trade contemplates a series of excursions for Halifax business men throughout the Province in order to improve trade relations between the city and the adjoining districts. About thirty members of the Board have signified their intention of joining the first excursion, one of three days along the Halifax and South Western Railway, making stops at the principal towns. It will likely come off within the ensuing three weeks.

The Dominion Coal Company has advanced propositions to its miners by which they may acquire their own houses and lots. The system is similar to that of the regular loan companies, but the terms are more favorable, lots being sold at nominal figures.

The Dominion Government will complete the fortifications for the defence of Halifax in course of construction when the Imperial forces left. Vast sums of money, running up into the millions have been expended upon these fortifications, extending in a series of forts for ten miles out on both sides of Halifax harbor. Spion Kop and Fort McNab are now under construction, the former being a position of great strength upon which work has been in progress during the past few years. The amount stated as necessary to complete the work is $30,000, but if it is to be carried to completion on the scale on which it was undertaken it is evident that a much greater amount will have to be expended. About one hundred men have been at work all winter, which the openness of the season permitted.

The trouble at the Inverness Colliery has been temporarily settled. This mine when running to its full capacity employs about six hundred men, but recently it has been working at reduced time. A few days ago the company posted a notice of a new dockage system. This and other grievances which the men say have been long accumulating, caused the men to go out. Later on the dockage notices were removed and the men went to work pending a reference of their grievances to the Provincial Workmen's Association. The situation was a somewhat unusual one, as both sides had committed breaches of ordinances, the officials having instituted the dockage system without consulting with the men, and management, and the men having quit work without the authority of the P. W. A. sub-council.

Vault doors in Bank of Montreal and Royal Trust Company, Montreal

Established 1855.

PIETY AND BUSINESS.

A Presbyterian clergyman in the United States has given up his pastoral charge and gone to be a stock-broker. This is Rev. Samuel P. Montgomery, of the Gill Hall U. P. Church in Pittsburg. He thus answers the natural question why he took this step. He appeared to think himself genteelly starved:—

"Why do preachers leave the ministry to engage in business? Why am I engaged in business? Well, look at those six children there. They need food and clothing and education; that's my reason for resigning my pastorate at Gill Hall and engaging in the stock broker business."

"The salary of a country pastor cannot in these days be stretched over the needs of a growing family. Three of my children are large enough to require better educational advantages than they can get at a country school.

"The love of display, and the aping of the rich by the poor and by the middle class, and especially by the latter," said the preacher, speaking of the trials of a pastor's life, "have laid upon the ministry a burden almost too heavy to bear."

One does not quite understand this last sentence. It is unhappily true that the aping of rich people's habits of display and self-indulgence by poor or middle-class people is proving a perfect scourge to American life. But why should a Christian pastor yield to this extravagant folly; is it not his business to lead a simple life and try by both example and precept to stem the tide?

Co-operative stores for workmen are again being discussed in Cape Breton. These stores are described as having been a great success in the Old Country; profits there last year amounting to nearly fifty-two million dollars on nearly four hundred and sixty million dollars worth of business. They have recently purchased six million dollars worth of wheatlands in the North-West. In this country they have not been a complete success, but this has been largely due to incompetent management. The co-operative store at Dominion No. 1, started three years ago, has been very successful. The membership is now 153; the capital is $7,000, and profits last year were $4,200 on $44,000 worth of business. A good many years ago these stores were to be found in every mining town in the Province, but many became defunct. Now, however, they seem likely to be revived on a similar basis.

The Nova Scotia Mining Society held its annual meeting here last week. President Hayward read an interesting paper on "Salt," looking towards its manufacture in Nova Scotia. Other interesting papers on technical education were read by Professor Richardson, of the Massachusetts Institute of Technology, and Prof. Sexton, of Dalhousie College. The officers of the society for the coming year were elected as follows: President: A. A. Hayward; 1st vice-president, Charles Archibald; 2nd vice-president, Prof. J. E. Woodman; council, J. A. Johnson, F. H. Sexton, R. H. Brown, H. S. Poole, G. W. Stewart, B. F. Pearson; secretary-treasurer, H. M. Wyld; editor and librarian, H. Piers.

Union between Halifax and Dartmouth is under discussion. The two places are now separated by the harbor, and there is some difference of opinion as to the advisability of the move. The population of Dartmouth is between six and seven thousand, and it is the seat of important industrial works. There is a probability of the union being consummated in the near future.

Halifax, NS., March 26th.

⁂

COAL IN ONTARIO.

Editor "Monetary Times:"—

Sir,—The following item appeared in the Galt Daily Reporter, of the 22nd inst., under the heading "Railway Confiscates Coal Output."

> Saginaw, March 22nd:—The Pere Marquette Railroad has issued an order confiscating for its own use, all the coal that is mined in the Saginaw Valley between now and April 1st. The railroad has on hand 20,000 tons, and expects to increase this by 30,000 tons.

If there is coal in the Saginaw Valley in the State of Michigan, what reason is there that there is no coal in Ontario? What difference is there, if any, between the geo-

logical formation of the two, each appears to have the same general characteristics on the surface, and what difference is there below the surface? The question of coal existing in Ontario is of much importance, and may become more important, the climate is certainly not becoming milder, and it is not pleasant to think that we have to depend on the United States to keep from freezing. In this age of development, so called, might it not be advisable to endeavor to develop a little coal? I am of the opinion that an effort might be made.

Yours truly,
E. J. BEAUMONT,

Galt, March 23rd, 1906.

* * *

COAL PRODUCTION.

In view of the possible coal strikes, both in the anthracite and soft coal regions, the following figures compiled by the United States Government will be of interest. Last year's production of anthracite amounted to 72,227,428 tons. These figures include the total production of the mines and contain two items which are not always included in the total, as follows:—

	Tons.
Shipments to market	61,410,432
Sold at the mines	1,402,644
Consumed at the mines	6,282,076
Total coal mined	69,339,152

In addition to this it is proper to include in the anthracite output the washery product which was 2,644,045 tons, and besides this 244,231 tons of semi-anthracite coal was produced at the Bervoir mines which is included in the Government's figures. This would give the following:—

	Tons.
Total coal mined	69,339,152
Product of washeries	2,644,045
Product of Bervoir mines	244,231
Grand total	72,227,428

In this is included the Bessemer output in the coal shipped or sent to market, making that item 61,654,432 tons.

The following shows the gross output of anthracite coal for two years not including washery coal:—

	1905.	1904.
Marketable shipments	61,654,432	57,727,178
Sold at mines	1,402,644	1,410,703
Consumed at mines	6,282,076	6,180,609
Total	69,339,152	65,318,490

ANSWERS TO ENQUIRERS.

Builder, Montreal.—Since replying through these columns last week to your enquiry of 17th instant we have learned that the Hennibique Construction Company has offices at 1123 Broadway, New York.

A. E. Smith, Paris, writes:—"Will you tell me through your columns where I can get the latest statistics on Canadian Banks and Banking, such as number of branches in each Province, and so on." [We reply that there are lists given in R. G. Dun's Reference Book of the bank branches in each Province of the Dominion. Also that the Canadian Almanac, (Copp, Clark & Co., Toronto), has on pages 95 to 102 inclusive, a list of bank branches with the names of their managers or agents. This list numbers 1,296. "The Monetary Times" list numbers 1,407 up to 26th March. On pages 103, 104, and 105 of the Almanac will be found some other bank information.]

* * *

—A hint suggestive of a worthy public service was that contained in a summing up by a Toronto grand jury on the 23rd inst., regarding the difficulties at present existing for persons of small means who are temporarily embarrassed. Incidentally it suggested some sort of a raison d'etre for the money-lenders who have latterly been shown up in such an unprepossessing light. The point made was that the "poor man, if it were not for the money-lenders now carrying on business, would be unable to obtain money on any terms whatever. None of the regular loan companies will advance money on chattel mortgages; while the very smallness of the amounts required from time by those borrowing from money-lenders adds to the difficulty of getting the money at anything like a fair rate." The jury continued: "We are of the opinion that the institution of municipal or governmental money offices, where money may be raised on chattels in small sums, and at a reasonable rate, as is done in France, would well deserve consideration by our legislators." There is a good deal to be said in favor of the idea.

* * *

—At the second annual meeting of the Winnipeg Grain Exchange Clearing House Association, it was stated that during the twelve months ending February 28th, the total amount of wheat which passed through the Clearing House was 176,220,00 bus., compared with 164,550,000 in the corresponding period of the preceding year. Directors were elected as follows:—Capel Tilt, F. Phillips, R. Muir, J. Fleming, W. H. McWilliams, S. P. Clark, A. Hargraft, T. Hatcherd and Donald Morrison. After the regular meeting the directors met and elected the following officers for the ensuing year:—President, S. P. Clark; vice-president, W. H. McWilliams; secretary, Capel Tilt; manager, F. O. Fowler.

GENERAL BANKING BUSINESS TRANSACTED.

The Molsons Bank.

102nd DIVIDEND.

The Shareholders of The Molsons Bank are hereby notified that a dividend of TWO AND ONE-HALF PER CENT. upon the Capital Stock has been declared for the current quarter and that the same will be payable at the Office of the Bank, in Montreal, and at the Branches, on and after the

Second Day of April Next.

The Transfer Books will be closed from the 19th to the 31st March, both days inclusive.

By order of the Board,
JAMES ELLIOT,
General Manager.
Montreal, February 23rd, 1906.

The Bank of British North America.

INCORPORATED BY ROYAL CHARTER.

The Court of Directors hereby give notice that a dividend, free of Income Tax, of Thirty Shillings per share will be paid on the 5th of April next to the Proprietors of Shares registered in the Colonies, being at the rate of six per cent. per annum for the year ending 31st December, 1905. The Dividend will be paid at the rate of exchange current on the 5th day of April, 1906, to be fixed by the Managers.

No transfers can be made between the 22nd inst. and the 5th proximo as the books must be closed during that period.

By order of the Court.
A. G. WALLIS,
Secretary.

Meetings

REPORT OF THE DIRECTORS

OF THE

Bank of British North America

PRESENTED TO THE PROPRIETORS AT THEIR SEVENTIETH YEARLY GENERAL MEETING.

The yearly general meeting of the proprietors of the Bank of British North America was held at the offices of the company, 5 Gracechurch Street, London, on Tuesday, 6th March, Mr. J. H. Brodie presiding.

The secretary (Mr. A. G. Wallis) read the notice convening the meeting.

The chairman said: Before commencing my remarks I should like to express my regrets at the absence to-day of one of the directors—Mr. E. A. Hoare—who is too unwell to be present. Mr. Hoare takes a great interest in the bank, and I believe has never before missed attending these general meetings during the last twenty-six years. In the first place you will wish me to make some remarks on the balance sheet to the end of last year. Taking, firstly, the item of deposits, there is again an increase in the deposits and current accounts of £490,000 sterling ($2,384,666), which is mostly in the savings banks deposits, and, as you will recollect, it was in these deposits that the growth was shown for 1904. The actual increase in our savings bank deposits is about £390,000 ($1,898,000). Bills payable are a good deal higher than last year, showing as they do an increase of over £1,000,000 ($4,866,666). Notes in circulation have increased £70,000 ($340,666), and at times during the year have considerably exceeded this amount. We are pleased to be able to put a further £20,000 ($97,333) to our reserve fund, thereby bringing it up to £440,000 ($2,141,333). It is getting on towards the half-million—a figure which we shall all, I am sure, be delighted to reach—and all saved out of profits, and none of it by the issue of new capital. If you now turn to the credit side, cash in specie and cash at call and short notice are more than £600,000 ($2,920,000) above those of last year, and show an excellent percentage on our responsibilities on the debit side, these two together being close upon 40 per cent. of our total liabilities to the public. Investments are slightly altered. We sold our £25,000 ($121,666) of Exchequer bonds, and increased our Consols to an equal amount. Bills receivable, loans on security and other accounts are higher by one million sterling. The premises account, after transferring the sum of £10,000 ($48,666) from the profits of the half-year, stands at £173,000 ($841,933), which is £7,000 ($34,066) less than at the corresponding date of 1904.

At our last annual meeting the chairman, Mr. Hoare, gave you very full information respecting the various branches at which expenditure had principally been incurred, so that I need not go over that ground again; but I may remind you that he made it very clear that further transfers will have to be made in the future, when he said, "not because there is not ample value, and more than ample value in property, but because we do not wish to see this account remaining at so high a point." In the opinion of the Court it is most important that we should keep our premises thoroughly up to date, and with this object in view there is work still to be done, and, therefore, you must not be surprised when we feel it necessary to make further transfers from profits in order to keep this account down. Our profits for the year, after making ample provision for all doubtful accounts, amount to £93,000 ($452,600), and these figures compare with £96,000 ($467,200) in 1904. The small difference is more than accounted for by the disappearance of one or two large accounts which had previously been borrowers. At our last meeting the chairman referred to the inactivity which prevailed during 1904 in New York, at the same time remarking: "That these conditions will not be permanent, and a return to greater activity will certainly be seen, although I am not going to venture to predict the date." As it turned out, low rates for money continued until September, when a better demand sprang up, which later on was followed by some weeks of unusual activity and exceedingly profitable rates, in which our agency fully participated. Generally speaking, business in Canada during 1905 was prosperous, all the great industries showing

More Than $7,000,000.

Over and above premiums received, more than $7,000,000 has already been paid or credited to its policyholders by the

DIVIDEND NOTICE.

The Metropolitan Bank.

Notice is hereby given that a Dividend of Two per cent. for the quarter ending March 31st next (being at the rate of Eight per cent. per annum), on the Capital Stock of this Bank has been declared, and that the same will be payable at the Head Office and Branches of the Bank on and after

The Second Day of April Next.

The Transfer Books will be closed from the 19th to 31st of March, both days inclusive.

By order of the Board,
Toronto, 27th February, 1906. W. D. ROSS, General Manager.

The Traders Bank of Canada.

Notice is hereby given to the shareholders of the Traders Bank of Canada that a special general meeting of the shareholders of said Bank will be held at the Banking House, 10 Front Street West, in the City of Toronto, at the hour of twelve o'clock noon, on Tuesday, the 17th day of April, 1906, for the purpose of considering, and if approved, of passing a By-law increasing the capital stock of the Bank owing to the great expansion of its business, and to consider the day upon which the Annual General Meeting shall be held, changing the date from June to January, and also to discuss the question of paying the dividend quarterly instead of half-yearly as at present.

Dated at Toronto this 26th day of February, 1906.

By order of the Board.
H. S. STRATHY,
General Manager.

good results, and trade has been generally active throughout the year. Deposits in chartered banks increased over fifty million dollars. I cannot give you the total deposits for 1905, but the amount with all the banks, including the Dominion Government Savings Bank, was some 107,000,000 pounds sterling for 1904, whilst in 1880—some twenty-five years before—these were only about seventeen million pounds sterling. The bank clearings of Canadian cities have increased 22 per cent. The lumber trade has shown a general improvement, the English market partially recovered from the depressed condition which was the characteristic of 1904; but it was the improvement in prices in the American market that contributed most to the prosperity of this industry; and prices still continue to advance. The salmon industry of British Columbia for 1905 has shown very good results. The catch was a record one, and the prices realized very good, and the market continues strong. Many of the canning companies must have done very well in 1905, improving their financial positions to such an extent as to put them on a very sound basis. Dairying continues to show excellent results, and the total value of exports under this heading for the year ended October 31st, 1905, reached the very large total of 42,000,000 dollars. In mining in British Columbia the approximate estimate of the mineral production in 1905, sent over in anticipation of the full returns, gives a total of $21,403,000; these figures show an increase of more than 2,000,000 dollars over the value of the output for 1904—a difference which is largely accounted for by the high price of copper compared with the price ruling in 1904, which has stimulated production of the great copper mines of the Boundary district. In the Yukon a further decline in the output of gold has to be noticed. The Government figures, calculating gold at $15 per ounce, show a total export of $7,110,000, which is more than $2,000,000 less than the output of 1904. This is partly accounted for by the fact that the summer season was extremely dry and good labor none too plentiful. The future of the camp, as the chairman told you last year, appears to depend chiefly upon an adequate water supply, and we understand that surveys have now been made by engineers of high reputation, who are of opinion that there are no difficulties which cannot be overcome in bringing a sufficient supply of water to the camp. Should this prove correct the life of the Yukon may be prolonged. It is pleasing to see the climate of British Columbia being appreciated by the better class of settlers in this country, and in many parts, especially in the Island of Vancouver, families are continuously arriving, who, having small independent means, take up farms, and seem greatly to enjoy life.

In Manitoba and the North-West the harvest constituted a record, the production of wheat in 1905 amounting to 86,000,000 bushels, and the quality was excellent, and fetched good prices. The exports of cattle were 59,000 head, 22,000 head more than in 1904, and 38,000 more than in 1903. The immigration to the Provinces of Manitoba, Saskatchewan and Alberta is stated to have been 120,000 persons. A year ago your attention was drawn by the chairman to the fact that the number of commercial failures in Manitoba and the North-West Territories had increased, adding that the total of such liabilities had not increased in like proportion, and he gave a word of warning against too great freedom in granting credit. It is, therefore, with great regret that I have to point out that, whereas in 1904 the failures in these three Provinces were fifty-two in number, with liabilities amounting to $370,000, in 1905 they were 155 in number, with liabilities amounting to $1,324,000. Our Winnipeg manager, who writes with a large experience of local conditions, is of opinion that while established houses have added to their means and strengthened their position, many have gone into business of late years lacking capital or experience, or some other essential, with the inevitable result. The settlement of these three Provinces is proceeding rapidly, as the immigration returns clearly indicate, and the value of important farms has considerably increased, and in the most favored localities has now reached a point where the value compares not unfavorably with the price of freehold farms in certain counties of England. The value of good land has also advanced considerably, chiefly under the influence of purchases for actual settlement, but also, I regret to say, from the purchases of speculators, which have been on a considerable scale, and will certainly not have a beneficial influence upon the agricultural industry. This concludes the general remarks I have to make to you, but before sitting down, I will ask you to appreciate that the results of the year's working has not been brought about without hard work by our general manager, Mr. Stikeman, and his staff, and I am sure you will allow us to convey to those in Canada and to our London office your hearty thanks for their continued good services in the interests of the bank. I beg to move that the report and accounts be adopted, and if any proprietor wishes to ask any questions I will be pleased to reply to him to the best of my ability.

Mr. Henry R. Farrer seconded the resolution.

No questions being asked, the resolution was put to the meeting and was carried unanimously.

Messrs. G. D. Whatman, J. J. Cater, and H. J. B. Kendall, the retiring directors, were re-elected, and Mr. C. W. Tomkinson was elected to fill the vacancy caused by the resignation of Mr. Maurice G. C. Glyn, who found it impossible for him to devote sufficient time for the conscientious discharge of his duties on the Board.

THE BANK OF BRITISH NORTH AMERICA.

We understand that Mr. Malhiot, one of the engineers connected with the Dominion Public Works Department, is visiting the northern end of Lake Winnipeg with the object of inspecting the strip of land lying between that lake and Cedar Lake, the last-named body being an extension of the Saskatchewan River. It is proposed to cut the channel through this strip of land between the two lakes, which are both of the same level, in order to divert a partial flow of water of Lake Winnipegosis into the Saskatchewan, and so to lessen the danger of the overflows of Lake Manitoba, into which Lake Winnipegosis now empties its enormous volume of water. The proposed channel would also prevent to some extent the flooding of low lands lying along the banks of Lake Dauphin.

Mercantile Summary.

The International Railway Company in conjunction, it is said, with Toronto capitalists have on foot a plan for the bridging of the Niagara River for a direct trolley line from Toronto to Buffalo by way of Lockport.

The Department of Marine and Fisheries is establishing a fully-equipped life-saving station midway between Carmanah Point and Cape Beals, off the dangerous west coast of Vancouver Island. A large lifeboat is being built in Vancouver in connection with the same purpose.

Port Colborne, Ont., council has granted a franchise for the term of twenty-five years to a telephone company, of which Mr. J. R. Tuck is a prominent member, which will put in lines connecting with Wainfleet, Humberstone and Bertie townships, and making a through connection from Dunnville to Buffalo.

The Merrill Lumber Company, of Vancouver, who own extensive timber limits in various parts of the Province of British Columbia, have sold a considerable part of them to the Paterson Timber Company. Many similar transactions have been made lately, and the lumber business altogether is very active there just now.

A winding-up order has issued in the matter of the Universal Ideal Coal Co., Limited, of Montreal and St. Hyacinthe. The company was chartered under the laws of the State of Maine in January, 1905, with a capitalization of $1,000,000, to engage in the manufacture of peat fuel by a patented process, but the enterprise has not developed successfully.

The Ontario Government is being asked for a charter for the Hamilton, Galt and Guelph Railway Company, which proposes to construct and operate electric railways from Hamilton to Elmira by way of Galt, Preston, Berlin and Waterloo, and from Hamilton to Elora and Fergus by way of Guelph; also to manufacture and dispose of electric power.

It is understood that the Canadian Pacific Steamship management will utilize the southern route, that by way of Cape Race, for their steamers in the St. Lawrence trade instead of that by way of the Straits of Belle Isle. The latter is shorter, but they consider, is more dangerous. In the matter of disasters the Belle Isle route would appear to have a better record than the Cape Race coast. By the official chart of casualties it may be seen that along the southern coast line of Newfoundland, between Conception Bay and the Bay of St. George, there have been about 320 wrecks of all kinds, while on the north coast around Belle Isle, from Labrador and Hare Bay to Bay of St. George, the total casualties recorded are less than one-half of that number. It is evident, therefore, that there is room for much difference of opinion respecting the merits of the two routes.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

J. C. Caty, a dry goods retailer in Montreal, is reported as arranging to pay 50 per cent. on liabilities of some $10,000.

The Cobalt Consolidated Mines, Limited, capital stock $2,500,000, head offices at Cobalt, Ont., has been incorporated under an Ontario charter for the purpose of carrying on the work of a mining, smelting, reducing and development company in all its branches. F. L. Culver and A. J. Young, of North Bay, in Nipissing district, are provisional directors.

The Maitland River Power Company, Limited, has been incorporated with an authorized capital of $100,000. It proposes to construct and operate works for the production and distribution of electricity for heat, light and power purposes. W. J. R. Holmes, county treasurer of Huron; J. T. Goldthorpe and others, of Goderich, are named as prominent members of the company.

The Consolidated Lake Superior Company is now turning out steel rails at the rate of 620 tons per day in spite of the fact that its rail mill was only intended originally to be of 500 tons capacity. It is expected that the company will this month turn out 16,000 tons of eighty-pound rails, for which a ready market is found. The C.P.R. has practically taken the entire production of the company during the last winter.

The Standard Trusts Company, whose statement for the year 1905 we published and reviewed a few weeks ago, has issued a neat pamphlet of 32 pages, (with the Royal Standard of the British Empire on the front cover), containing the company's report and list of shareholders, and a brief treatise on the advantages of trust company administration. It is a particularly neat specimen of typography.

Among the fires of the past week was one in the Department of Marine at Ottawa, near the Geological Survey, which, however, was stopped before much damage was done. An old landmark of Montreal, the old Fortier house, once the headquarters of General Montgomery, was almost wiped out by fire, the origin of which is unknown. The loss, including that to the premises of N. Prevost & Co., silk waist manufacturers; E. Jobin & Co., millinery, and L. Hirschson & Co., dry goods importers, who occupied the building, is placed at $30,000.—Two large buildings on the Esplanade, Toronto, occupied by the W. McCann Milling Co., Armours, Limited, the Craig-Cowan Co., Canadian Portable Fence Co. The loss altogether is calculated at over $60,000, about three parts insured.—John Hannah's saw and grist mills at Greenbush, near Brockville, destroyed.—Ovans Bros.' general store at Hamiota, Man., destroyed at a loss of $10,000, with $6,000 insurance. —Walter Mitchell's planing mill at Port Stanley, Ont., burned. Loss, $4,000; not insured.

CORRESPONDENCE INVITED

54 King Street West, TORONTO

Mercantile Summary.

The Empire Elevator Company has let a contract to Barnett & McQueen for an elevator at Port Arthur, Ont., of 3,000,000 bushels capacity.

On April 16th there is to be a meeting of the shareholders of the Toronto Railway Company to consider the issue of $1,000,000 new stock at par, making the company's capital $8,000,000 of common stock, with $3,613,000 of bonds. This is supposed to be for large extensions of lines and improvements in plant. Relaying of track and many new cars are urgently needed.

The West India Electric Company held their annual meeting in Montreal last week, and re-elected the old board of directors as follows: Messrs. James Hutchison, C. J. Fleet, K.C., Hon. David McKeen, G. M. Webster, W. Graham Brown, Henry Holgate, and A. R. Oughtred. The annual report showed that the gross earnings for the year were $139,762, a gain of $8,596 over the previous year. Net earnings were $34,242, an increase of $6,111.

If the projects of the Canadian Central Electrical Railway be carried to fruition the South-Western Traction Company will meet competition of a strong order. It is its intention to construct a line to run from Montreal to Ottawa, Toronto, London, and finally running south through St. Thomas to a lake outlet at Port Stanley. It is stated that Alfred Moseley, who visited Canada a few months ago in the interests of Mr. Chamberlain's tariff schemes, is interested in this new electric railway project.

A general dealer named J. E. Paquet, of Lauzon Village, on the Levis side, near Quebec, has assigned, owing, it is said, to the giving of too much credit. His liabilities are reported at $5,500, while his assets are placed at only $2,900.—After reaching the age of sixty in the occupation of a farmer, Celestin Imbeau, of Sayabec, Que., embarked last year in a small grocery. Like the majority of such cases, his venture has quickly resulted in disaster, and his estate is in the hands of the assignee.—The insolvency is noted of Michel Coulome, of St. Leon le Grand, Que. He was formerly a blacksmith at St. Fabien, in the same district, and five years ago started in storekeeping at his present address, also running a small saw-mill. He is said to owe about $3,500.—A sash and door manufacturer of St. Jerome, Que., Regis Guenette by name, has assigned to Wilks & Michaud, Montreal. He was a farmer, and began business eight years ago. He has not shown much aptitude for business, being complained of as slow pay, and he is said to show assets of only about $1,300 against liabilities of $10,000.—Joseph Boudreau, of Quai les Eboulemens, on the north shore of the St. Lawrence, in the Saguenay district, is reported as compromising merchandise liabilities of about $1,500, due Quebec houses, at 45 cents.

DEBENTURES FOR SALE

CALGARY SCHOOL DISTRICT

Tenders addressed to the undersigned for the purchase of $90,000 of Debentures of the Calgary Protestant Public School District No. 19 in Blocks of $10,000 each will be received until 4 o'clock p.m., April 9th, 1906.

PARTICULARS

Total amount of issue, $90,000.

Rate of interest, 4½% payable yearly.

Principal repayable in 30 equal consecutive annual instalments with interest at the above rate, at the Imperial Bank of Canada, Calgary.

Purpose of issue: to erect and equip one solid stone school building and one solid brick school.

Total assessed value of School District, 1905, $5,433,469.

Estimated true value of taxable property within the limits of the District, $8,000,000.

Total Debenture debt of the District, exclusive of the present issue, $80,098.

Value of property owned by the District, $190,000.

School rate of taxation, 1905, 7½ Mills.
Population of the District (City of Calgary), 16,000.

Tenders will be received for the whole amount or for one or more blocks of $10,000.

The highest or any tender not necessarily accepted.

W. L. WAINES,
Secretary Calgary Public School Board,
Calgary, Alberta.

Mercantile Summary.

The Amherst Suspender Company's premises in Amherst, N.S., were partially burned on Saturday last, with a loss of about $4,000, the insurance being $2,000.

Corroborative reports have reached Grand Forks, B.C., as to the strikes which have been made on the Strathmore property, in the Greenwood belt, of high-grade ores. Some assays which have been made are said to average $400 per ton in gold and copper.

The Britannia mine, which now produces in the neighborhood of 9,000 tons of ore per month, is to increase its output very largely, probably to 15,000 tons per month.

The Maritime Coal and Railway Company, Limited, or, as it will be called in future, the Maritime Coal, Railway and Power Company, held its annual meeting in Montreal on the 24th inst. and re-elected the old board of directors as follows: President, Hon. Wm. Mitchell; vice-president, Mr. N. Curry, of Rhodes, Curry & Co., Amherst, N.S.; managing director, Mr. David Mitchell. Directors—Messrs. William Farwell, H. D. Smith, A. E. Dyment, M.P., and James Mitchell, Boston.

Alex. Livingstone, C.E., a nephew of David Livingstone, the great African explorer, whose genius for tracking the trackless plains he seems to have inherited, has been for several months past exploring the timber and mineral resources of the Peace River country. He gives a very different story as to the possibilities of that great country from that presented by Prof. Macoun, whose report created so much adverse and acrimonious comment. "In fact," says Mr. Livingstone, "I have implicit faith in the possibilities of the Peace River country. It will be one of the gardens of Canada." He made several important discoveries in the way of timber, coal and other valuable minerals.

The name of the Maritime Coal and Railway Company, Limited, operating the Chignecto mines in Cumberland county, N.S., has been changed to the Maritime Coal, Railway and Power Company, Limited, and the par value of the shares increased from $5 to $100. The annual meeting was held at the Windsor Hotel, Montreal. The company is adding an extensive electric power plant to their works, contemplating a supply of electricity for lighting and manufacturing purposes to Amherst and other towns. Right of way (free) for a pole line from the mines had been secured all the way to Amherst. After the annual statement had been adopted the election of officers took place as follows: Hon. Wm. Mitchell, Drummondville, president; Mr. Curry, of Rhodes & Curry, Amherst, N.S., vice-president; David Mitchell, managing director; Messrs. Wm. Farwell, president of the Eastern Townships Bank, Sherbrooke; H. D. Smith, A. E. Dyment, P.M., Algoma, and James Mitchell, of Boston, Mass., directors.

About a year ago R. Jones started in a general country store business at Ste. Rose de Degele, Que., buying out the stock of Joseph Tetu at 100 cents on the dollar, it is said. He showed a lack of experience from the start, and his affairs are already in the assignee's hands. His indebtedness is shown at $4,476.—Another similar case is that of P. S. Burman, of Weirstead, Que., in the Pontiac district, who last summer took over the store business of his mother-in-law, Mrs. Cosgrove, on certain considerations, included in which was the keep of the former proprietress during her lifetime. He evidently had a very indifferent knowledge of business methods in assuming the business, and his assignment is already reported.—Germain Caron has been carrying on a moderate store trade at Trois Saumons, Que., for about thirty years, and has apparently hitherto paid his way in full. Latterly he has fallen behind in the race for business, and has now assigned. Liabilities are placed at $5,400.

TELEPHONE DEVELOPMENT.

Few people probably realize that the telephone business has been attended with more rapid development than either the telegraph or written letters. Yet, if some recent statistics bearing on the whole world are to be believed, this is what has occurred. In the ten-year period, 1904-1894, inclusive, the percentage of increase in the number of conversations over the telephone wires of Europe was three times as great as the percentage of increase in the number of letters and postals written during the same period. In the United States the ratio of increase in favor of the telephone has been even more remarkable. Taking the lines of the American Telephone and Telegraph Co. alone, it is found that the percentage of growth in telephone conversations to letters and postals in the United States in the ten-year period mentioned has been as 4½ to 1. In both Europe and the United States the relative importance of letters and postals and telegrams as means of communication has diminished, while the telephone has increased in Europe from ten per cent. to over 18 per cent. of the total, and in the United States from 18 per cent. to nearly 38 per cent. of the total.

* * *

COTTON GROWING IN EGYPT.

A series of interesting letters from the pen of Mr. Geo. H. Hees, of Toronto, descriptive of present day conditions in the Land of the Pharaohs, are being published by the "Mail and Empire." Among the first of these is one of November 25th last, dealing with the growth of cotton in the Delta of the Nile. We give some extracts from this letter. Further ones of the series have been published this month:—

"The Egyptian cotton, of which we hear so much, is grown almost entirely in the Delta. As the railroad runs through the cotton fields, we are able to see from the car windows where this fine, long staple fibre is produced. During the Civil War in the United States in 1861-4, when an embargo was placed on the southern ports, cotton went up by leaps and bounds, until it sold for a dollar a pound. This was Egypt's opportunity, and she began cultivating it in the Delta, and has increased her supply from almost nothing to an annual revenue of over fifty million dollars.

"Cotton grown in Egypt brings at least two cents a pound more than cotton grown in other countries. Its seed originally came from the celebrated Sea Island cotton, of the Southern States. It is its fibre, which is an inch and a half long, that gives Egyptian cotton its high value. Fine threads can only be made of long-fibre cotton. The rich Nile soil will grow a crop of over five hundred-weight to the acre, and this is twice the quantity American planters get from their land. * * * Were it not for its superior quality the cotton of Egypt would be little heard of, for the quantity raised is only a million bales of 500 pounds each, per annum, and if all the land that is brought under cultivation by the new dam at Assouan was used for raising cotton, not more than a million and a half bales could be raised in the country.

"The Washington Government recently ascertained by careful examination that the United States has the soil, the climate and the laborers for producing annually between seventy and eighty million bales of cotton of 500 pounds each. Last year thirteen and a half million bales was produced in the cotton States. This was more than the world demanded, and the price dropping nearly half, planters began burning their crops to reduce the excess."

Word comes from London under date March 17th current of an enterprise which must have the effect of enlarging the area within which cotton can be grown in Egypt. It appears that the Egyptian Government has just decided for the construction of a new dam on the Nile, near the village of Esneb, about 100 miles from Assouan, where the great dam was recently constructed. The expense of the new undertaking is calculated at $11,000,000, and the contract will be assumed by the firm of Aird & Co., which constructed the Assouan dam. It is expected that when this work is completed each side of the river for a distance of about 240 miles will enjoy a system of irrigation, so that the raising of a cotton crop will be easily established.

* * *

DOES MUNICIPAL OWNERSHIP PAY?

Even in England, the paradise of municipal ownership, opinions are very conflicting as regards the merits and real results of municipal ownership. But that the municipal ownership idea has spread to a most remarkable extent is beyond question. Some observers, indeed, speak of this in a tone of semi-ridicule, as, for instance, the "Daily Mail," which says:

OUR TRUCKS are fitted with rubber tires that do not come off. . . . .

MONTEITH, NIXON & Co.,

AGENTS WANTED in every unrepresented District in Canada.

Our municipal authorities have evidently determined to act the part of universal providers. In many instances the local authorities are now the largest employers of labor. Thus the London County Council, in one department alone, employs not far short of 4,000 men.

The scope of the activity of the boroughs is amazing. Merthyr Tydfil not only manages a municipal farm, but reports that "a good profit is earned each year." Brighton and Chester both own racecourses, to the benefit of the rates. One borough does a good trade in municipal fish manure.

Lincoln proudly boasts that it is part owner of a lunatic asylum. Colchester disposes of over a million and a half oysters a year from its municipal fishing beds. Kingston-on-Thames, the ancient borough, is willing to instruct school children in swimming at a penny a lesson. Hull owns a large share of a railway. Several boroughs boast of their Turkish baths.

The up-to-date workman to-day lives in a municipal house, lit by the penny-in-the-slot municipal electric supply. His wife cooks her meals on municipal gas, and makes her tea with municipal water. The baby is reared on municipal sterilized milk, and nursed in a municipal creche. The children go to a municipal school. The father rides to his municipal employment in a municipal electric car. He spends his Saturdays on a municipal racecourse, and has his weekly swim in a municipal bath; the wife at the same time doing her weekly laundry in the municipal washhouse. When they die, they are buried in a municipal cemetery.

To the question, Does all this municipal activity pay? the answer is made that an analysis of the figures shows a remarkable variation of cost for the same work in different boroughs. London loses heavily by its council lodging-houses; Glasgow, with lower rates, makes them yield a reasonable return. Manchester pays over £60,000 a year from its tramway profits for relief of rates, and places a still larger amount for depreciation. Oldham, despite the fact that it allows nothing for depreciation, shows a loss of over £4,000.

London comes out badly in comparison with the great northern and midland boroughs. The estimated "municipal trading" balance sheet of the county council for the coming year reveals a loss of about £63,000. The Thames steamboats are largely accountable for this. Much of the housing policy of the county council has been, to say the least, unfortunate. The total loss for the past year on the building schemes of the council is given as £14,566.

⁂

TORONTO MARKETS.

Toronto, March 29, 1906.

Chemicals, Drugs, etc.—Since last report practically no change has been made, either in prices or in the general situation. Not a very heavy movement is the record of this month's drug trade, but still no actual complaint as to dullness is heard. On the whole, the season's business has been a very fair one. In New York there is no new feature worthy of special notice, according to latest reports that have come under our notice.

Dry Goods.—Business is quite active in all lines. The demand for cotton staples at the increased prices announced a few days ago is brisk. The new schedule of the Dominion Textile Company shows that the recent decline in raw cottons has not affected the feeling towards finished goods. Flannels and drills are the goods which feel the upward movement most particularly. The demand is such and stocks as a rule so low that prices of manufactured cotton must rule high for some time to come.

Flour and Grain.—Very little change has occurred in the flour market, but it is still dull and heavy. Holders still ask $3.05, or 5c. more than bidders will offer, for ninety per cent. patents. Bran is scarce and higher than ever, and shorts is very strong. Oatmeal is dull and easy. In wheat the movement is rather slow. Other grains, except peas, which are a little lower, show practically no change.

Hides and Leather.—Some changes of an upward character are quite likely to take place in hides within the next week, as the quality is likely to show such an improvement as to justify it. For the moment an unsettled feeling prevails. Leather continues quiet, but a fair volume of business is being conducted.

Groceries.—With the recently recorded higher prices for sugar and the still very strong feeling in New York, there is to be noted a very firm feeling in this market. The movement shows no sign at the moment of slackening off. Canned goods are in good, seasonable demand. Tomatoes are scarce and very firm as before noted, and corn is also not in large supply. The dried fruits present average conditions for this time of the year. Currants are gaining somewhat in firmness. Prunes are meeting a fair enquiry.

Live Stock.—Dullness was the rule at the cattle market this week. Buying was slow, owing partly perhaps to the weather. Export trade especially was slow, prices being on really too high a basis to meet the views of English dealers. Very few choice cattle were brought forward, while the poor and medium qualities did not meet with a ready response. Prices for butchers' cattle were a shade easier for ordinary grades, while the better ones fetched the same as last week, though with no eagerness displayed.

Provisions.—Unchanged prices prevail for the better qualities of butter, and there is a good demand for the same. Cheese is firm at old figures. New laid eggs are a little weaker, owing to the warmer weather. Poultry is fairly firm. Prices for smoked meats and provisions are very firm, and it is the opinion of dealers that they are likely to remain so for at least a time.

Seeds.—Trade has been much more active again, and is likely to continue, particularly so during the next few weeks. Clovers have a tendency upwards.

Wool.—Some slight business has been done in early clips, but business is very slight so far. Prices are nominally much as before.

The Great-West Life Assurance Company has never lost a dollar of principal or interest; has never shown a dollar's worth of Real Estate under foreclosure; has paid in full every estimate of profits on policies that have matured, and gives the security of a million dollars capital without cost to the Policyholders.

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

MONTREAL MARKETS.

Montreal, 28th March, 1906.

Ashes.—There has hardly been a transaction for several weeks past, and little is coming in, there being hardly more than thirty barrels in store all told. Quotations are more or less nominal in character at $5.15 to $5.20 for first quality of pots; second pots, $4.65 to $4.70; first pearls, $7 to $7.25 per cental.

Dairy Products.—Supplies of fine creamery butter are now getting low, and receipts of new milk butter are as yet light. Good roll butter is in demand at 19 to 19½c., and Western dairy finds fair sale at 16 to 18c., as to quality; finest fall creamery is quoted at 22 to 22½c. In cheese there is not a feature of interest, and quotations are unchanged.

Dry Goods.—Last week was as wintry as any during the whole season, and, though the weather at the moment of writing has assumed a more spring-like character, retail business in the city is not as yet brisk. Wholesale dealers report a moderate aggregate of sorting orders by letter, but travellers report only a moderate volume of business. The Montreal Cotton Co. has issued a revised price list, showing an advance of from 5 to 7½ per cent. on most lines of white goods, and as much as 10 to 12½ per cent. on Turkey reds, etc. English deliveries of prints and cotton goods have been much delayed this spring, owing, it is said, to unusually large buying by Japan and China of these wares, and much inconvenience is being suffered in consequence.

Groceries.—Very little of a novel character is reported in this line. The sugar market is steady at the late advance, and no immediate change of any kind is looked for. The refiners have had a busy month, though the demand at the moment is light. Statistics regarding the sowings of beets in Europe will likely be published about a fortnight hence, and the figures are being awaited with interest as likely to influence the market more or less. A Barbadoes cable to-day quotes some stiffening in molasses, and laid-down cost is now figured at about 24½. The present jobbing figure is 30c. per gallon in single puncheons. It is reported there has been further purchasing of spot stocks of molasses on refiners' account.

Hides—Receipts of beef hides are reported light, and their quality is poor. Dealers continue to buy on the basis of 11c. per lb. for No. 1. Calfskins are coming in more freely, and are quoted at 12c. per lb. for No. 1, and 10c. for No. 2. Lambskins bring 10c. each.

Metals and Hardware.—Beginning next week there will be some hustling among the wholesale metal and hardware warehouses getting off the large accumulation of orders which have been held for despatch when spring freight rates come into effect on the 1st prox. The aggregate of said orders is greater than usual, and the demand is still active. No special changes are noted in quotations since a week ago. Some importers are buying charily, claiming to believe that prices of iron products in Britain are likely to ease off, and some slightly shaded cabled quotations of tinplates have actually been received within the last day or two, but representatives of British manufacturers claim that "one swallow does not make a summer." Pig iron quotations remain steady, No. 1 Summerlee being quoted for spring delivery, ex-wharf, at $21.25 to $21.50, and No. 3 Middlesboro' at $17.75 to $18. The general quotation for bars is $2.05, though fair lots could be put through at $2. Plates and sheets of all kinds are as before quoted. Lead is a little easier at $4.35 to $4.40; tin, very firm at 40 to 41c.; copper, 20½ to 21c.; spelter, 7 to 7¼c. Of antimony there is now only a few hundred pounds on spot, and 18c. is asked.

Oils, Paints, etc.—Little change is noted since a week ago. Linseed oil is cabled firmer from London, but local quotations continue at 54 to 55c. for raw. Turpentine is still selling at 98c., in single barrels, and white leads, window glass, etc., all remain at old figures.

Wool.—Importers and dealers in raw wools report a very light business, but are very firm on prices, as the late London sales developed an advance of 5 to 7½c. on ordinary crossbreds, 7½ to 10c. on mediums, and 10 to 15c. on fine. Local quotations for Capes are 19 to 23c., as to grade; fine B.A., 44 to 45c.; medium ditto, 38 to 40c.; North-West, about 21c., but there is little here; domestic pulled, 30c. per lb.

are difficult to place for either immediate or future delivery. The market has reached a point where buyers exercise caution, but conditions remain the same as a month ago. Prices continue firm at late quotations, and, although buyers may not be as eager to place orders as at the beginning of the year, sellers are equally as reluctant to canvass for business until they reduce by deliveries the large quantities of yarn they have sold. Spinners have plenty of work ahead of them, and, as users have provided for the future to a liberal extent, there is no necessity for further business, and neither buyer nor seller has an inducement to contract it.

Manufacturers of raw silk, says an advice from New York, are at a loss to understand the continued advance in raw material, judged from their own situation and the movement of their product. Based on the smallness of trade, prices should show a sagging tendency rather than otherwise. There seems, however, to be no doubt that producing markets are dependent on European demand for their firmness. Europe continues to operate, especially in the Yokohama market, where sales are fast depleting stocks, the available supply being much smaller than it was a few weeks ago. A good deal of the silk in Yokohama is not adapted for exportation on account of its inferior quality. These conditions have accounted for a further advance of 7½ to 10 cents a pound during the week. Certain qualities are not being quoted, being held out of the market by retailers.

A report from Belfast says there has been little change in the linen market. The turnover has been fully maintained, and prices are firmly held at highest rates. The outlook for the future is as satisfactory and promising as ever. The demand for yarns is of a steady, all-round character, and prices for both home and foreign spinnings are fully maintained. Manufacturers have booked a fair average number of orders. Unions are selling steadily, and there is an increasing demand for damasks and other household goods. Power-loom linens for bleaching and cloth for dyeing and hollands are in steady request, and makers-up are getting busier. Prices keep very firm. There is a further improvement in home demand for bleached and finished linens, and this tendency is likely to continue for some time. Reports from the United States are of a very satisfactory character, and demand is likely to tax production. Continental business is steady.

The "Wool and Cotton Reporter," speaking of the Boston woolen market, says it is firm, but there is not much business transpiring. Only two or three houses have succeeded in accomplishing any business worthy of note, comprising sales of fine medium and medium territory, and South American and Australian crossbreds. Quite a number of the mills have been represented in the market, including the worsted and woolen dress goods makers, a Philadelphia worsted spinner, manufacturers of thibets and kerseys, carriage cloth manufacturers and makers of uniform cloths. Two well-known dress goods mills have purchased foreign crossbreds, one of these concerns taking on a fair amount of South American quarters; but the purchases of consumers have, in the main, been of small lots, running in size from 25,000 to 75,000 pounds. There is, perhaps, as much business as could be reasonably expected in view of the small selections procurable. There are really no large and desirable selections of good, staple wools available, except of foreign wools, and how long these will last, in view of the strengthening tendency manifested on the other side of the water, is not clear.

The "Drapers' Record" states that a steady trade continues to be done in the home trade houses at Manchester, and the prospects are encouraging on the whole. A feature of the Lancashire cotton trade has been the big advance in raw Egyptian cotton since the beginning of the year. The quotation today for certain grades is 2d. higher than at the beginning of the year. This is a serious matter for spinners in the Bolton district and South Lancashire. It is said that the rise has been brought about owing to speculative influences in Alexandria. The latest estimates of the Egyptian crop are not very satisfactory, and, although earlier in the season the crop was said to be larger than that of last year, the news now is that the yield will hardly be so large as 1905. Spinners of Egyptian yarn have plenty of work to go on with, but the higher quotations which they have now been obliged to quote have restricted business. Cotton piece goods also, made from Egyptian yarns, have advanced in price considerably, and the higher rates being asked have placed goods out of the reach of buyers.

Workman's Rights

In Canada a workman may proceed against his employer under the Workman's Compensation for Injuries Act, and at common law. That means untold annoyance and inconvenience to an employer. An employer is even liable for damages to an employee for injury resulting from the negligence of a fellow employee. Oft-times a workman will get back at an employer in this way. The employee may or may not win. Whether he does or not it means a great deal of anxiety to you as an employer. Let us relieve you of all this. Our liability policies are designed to do this very thing.

Will be glad to
explain our plan.

Managers and Underwriters.

CANADA, THROUGH FRENCH EYES.

An article on the progress and position of Canada covers two pages of a recent issue of that important journal, "L'Economiste Français." It is by the well-known economical writer, Paul Leroi Beaulieu, and, as might be expected from so prudent a publicist, shows marks of careful enquiry and thoughtful deduction. Beginning with America, North and South, and passing in review Africa and Australia as spaces of the earth's surface offering attractions to farmer settlers, after considering them all he reaches the conclusion that Canada and Argentina are the two countries now in the world's eye which seem most likely to reach the most rapid and brilliant development in the first half of this century.

Manifestly M. Beaulieu has been reading widely about Canada, for he knows all about the Clergue enterprises at the Soo and the great industries of Cape Breton; Sudbury nickel, Yukon gold, the silver-lead ores of Kootenay; where we have coal and where we have not.

The Crown Life Insurance Company
Head Office: Toronto, Canada.
Offers These Advantages to Insurers:

Lower Premium Rates than those charged by most other Companies.
Policies Indisputable from Date of Issue.
Loan Values Guaranteed after Two Years.
Cash Surrender and Paid-up Values Guaranteed after Three Years.
No Restrictions as to Residence, Travel or Occupation.
Policies Reinstatable at any time after lapse.

COL. THE HON. D. TISDALE, P. C., K.C., M. P., President.
CHARLES HUGHES, A. A. S, Managing Director and Actuary.
A. H. SELWYN MARKS, Secy. and Treasurer.
WILLIAM WALLACE, Supt. of Agencies.

He has learned, too, what we ourselves have not known till lately, that much of our prairie land can produce not only spring wheat, but also winter wheat. He understands the isothermal lines and the influence of the Chinook winds. He has read about us not only in our literature, but in the "Financial Times," of London, and in Bradstreets, of New York. From the latter of these journals he has learned of our recent great accessions of immigrants from the United States, about our numerous and valuable water-powers, about our growingly expert use of electricity, about our enormous railway extensions, and their effect upon colonization in the near future. And he concludes a glowing paragraph about our prosperity in these words: "Thus Canada is making her influence felt abroad, both by her spirit of enterprise and by her commerce. . . . Canada, like other young countries, may have critical moments in her development, and is even now, perhaps, indulging in too much speculation. But the foundation of her progress is sound, and it may be predicted with safety that no country will make more rapid progress during the first half of the twentieth century than the great British colony in North America."

* * *

PROGRESS IN GALT.

The present days are stirring ones in Galt. That Ontario town has long had and deserved a reputation for skill in manufacture, especially in the iron and steel trades, and a very large proportion of its population consists of skilled and thrifty artisans. It now appears that the Galt Board of Trade has seven or eight industrial propositions under consideration, most of them from American firms, and a good prospect exists for an industrial boom. As there are no empty houses in the town, this means that many workmen's houses will have to be put up, and this question is being faced. The question of granting street railway switches to manufacturers is now being discussed in view of a by-law to be submitted on the 5th of April, granting one to Cowan & Co., Limited. If this carries, more will undoubtedly be sought.

Not only Galt, but the busy industrial region around it feels the impulse of the present marked manufacturing activity. A correspondent of the "News," writing on Tuesday last, says that practically all the vacant land between the corporation limits of Galt and Preston has already been optioned for manufacturing purposes, the demand for it dating back to the time when, two years ago, the Goldie & McCulloch Company, Limited, erected their immense new boiler shops there. "There is no doubt that Galt and Preston will in a few years be grown together, although at present two miles of farm lands separate the boundaries of the municipalities."

The town is presently to vote upon the question of supplementing by $30,000 the sum already voted, which was something like $40,000, for building and equipping a Collegiate Institute to teach manual training and domestic science. The scheme has the support of the Board of Trade; and no wonder, for if there is a place in Ontario whose young people should be furnished with such teaching it is Galt. We hear of the formation there of a strong local company, $100,000 capital, to go into the manufacture of malleable iron castings. Mr. J. H. Fryer, president of the Board of Trade, is to be managing director, and associated with him in the enterprise are such well-known men as Martin N. Todd, Hugh McCulloch, Jr., Peter Hay, F. S. Jarvis, of Galt; George Forbes, of Hespeler; Warden Sam J. Cherry and Mayor Fred Clare, of Preston, and W. M. Davis, engineer, of Berlin. The company have acquired premises on Shade Street, and have engaged an expert from Chicago to act as superintendent. They will at the outset employ eighty hands, it is expected. A local company has also just been organized to make whitewear and overalls. Handsome factory premises are being fitted up on Hawthorne Street. Sheldons, Limited, who are makers of heating and ventilating apparatus and blowers, already employ a hundred men, and have let contracts and begun work on an addition to their foundry which will double its size. There are said to be no vacant dwellings in the town.

Mercantile Summary.

The Robb Engineering Company, of Amherst, N.S., is building a 450 horse-power cross compound Corliss engine for the T. Eaton Co., Toronto.

The Grand Trunk Pacific Railway has made arrangements for making an entry into Port Arthur and Fort William. Construction work has practically started at both places.

The recently incorporated National Drug Company has, we hear, purchased several adjoining lots in Ottawa, and will build thereon a fine, large warehouse.

The Montreal Warehousing Company has elected officers as follows: Charles M. Hays, president; W. M. Ramsay, vice-president; Geo. H. Hanna, managing-secretary.

The Dominion Cooperage Company, Limited, London, Ont., has been incorporated. It will make, buy and deal in cooperage stock and lumber of all kinds. J. J. Hayne, of London, and F. E. Cannon, of Brigden, Ont., are in the company.

The Brandon Electric Light Company, Brandon, Man., has placed an order with the Robb Engineering Company, of Amherst, N.S., for two 375 horse-power compound Corliss engines for direct connection to 250 kilowatt generators.

A rumor from London has it that a company with a capital of $50,000,000 is being formed to take over all the Hudson's Bay lands and other assets, and that the old Hudson's Company will be wound up. The stock has been extremely strong in London lately, and has been hovering around £89 to £90, which in 1901 sold as low as £19½.

It is stated that the mines of the Dominion Coal Company have now reached a new high record with a daily output of 14,000 tons, and the outlook for the coming season is very bright. Another satisfactory feature is that the quality of coal never looked better than at present. The company now have over 105,000 tons banked, a very large amount for this period of the year. Prospects are for an early season, and the company expects to be in a position to take full advantage of it.

A Policy-Holder's Company

The North American Life Assurance Company has a Guarantee Fund of $300,000, of which $60,000 is paid up in cash. Interest is allowed on this paid up portion only. Policyholders thus obtain **additional security of $300,000** and what is of greater importance, are **assured of careful and conservative management** as the Guarantors are liable for this amount. By the Company's Act of Incorporation, every holder of a participating policy in the Company, upon which all premiums due have been paid, shall have one vote in person for each $1,000 of insurance held by him. Policyholders are thus given a **voice in the management** of the Company's affairs. In short, it may be said that the North American Life is neither a Mutual nor a Stock Company yet **possesses the advantages of both.**

THE NIAGARA POWER COMMISSION.

The commissioners appointed to inquire into the whole question of the developing of power from Niagara Falls by the various municipalities interested, and its transmission to various parts of Ontario, have now sent in their report, and they are probably not far wrong in their contention that the industrial future of the Province of Ontario is at stake on the issue involved. It way be said that not only were the commissioners unanimous in their findings, but that their conclusions are of a very definite character, based as they are on the reports of the best technical advisers. Briefly stated, their report is strongly in favor of establishing a development plant jointly by the municipalities, and such a step would still leave a large field open for the supply of electrical power by the private companies. For instance, there is ample field for enterprise in the electrification of railways, the extension of interurban electric roads, and so forth. The report is signed by Mr. E. W. B. Snider, Waterloo, chairman; P. W. Ellis, Toronto, vice-chairman; Hon. Adam Beck, M.P.P., London; W. F. Cockshutt, M.P., Brantford; and Prof. Reginald A. Fessenden, of New York, the technical adviser.

The municipalities which have already interested themselves in the important questions involved, are Toronto, London, Brantford, Stratford, Woodstock, Ingersoll, and Guelph, and these initiated the present enquiry. The commissioners suggest that any other towns interested should join in the work, but failing this that the former should carry out with all possible despatch the development of at least 60,000 horsepower.

The report shows that the present total annual consumption of the above-named municipalities is 73,631 horse-power, while the estimated consumption two years hence, that is to say, based on the increased demands of existing consumers and leaving out of consideration all additional demands sure to arise in connection with electric railroads, etc., is 87,883. Besides this, to be taken into calculation are the needs of several other municipalities not as yet formally expressed. Some towns, too, situate along the line of transmission, could be supplied at very attractive rates, and the extra quantity of power required would tend to bring down the cost to the seven municipalities already in the running.

The following table, taken from the report of the commissioners' shows the capital cost of developing, transmitting and distributing the three amounts of power indicated, including interest and sinking fund for the construction period. The municipalities named subsequent to the first seven, are subject to additional distribution costs.

	Cost of 30,000 H.P.	Cost of 60,000 H.P.	Cost of 100,000 H.P.
Toronto	$4,323,096	$6,265,424	$6,216,137
London	847,119	1,095,356	945,185
Brantford	429,152	571,097	509,248
Guelph	317,441	425,386	377,821
Stratford	329,923	431,018	368,154
Woodstock	216,226	278,939	244,589
Ingersoll	221,672	287,391	249,754
Hamilton	....	....	1,163,812
St. Thomas	....	....	399,438
Paris	....	....	123,322
Dundas	....	....	66,359
Mitchell	....	....	97,847
St. Mary's	....	....	130,136
Berlin	....	....	426,393
Waterloo	....	....	189,628
Preston	....	....	106,243
Hespeler	....	....	48,095
Galt	....	....	246,939
Total	$6,684,629	$9,354,611	$11,909,100

And the following shows the estimated total annual expenses of all kinds, except taxes, as the undertaking would be exempted from such.

	30,000 H.P.	60,000 H.P.	100,000 H.P.
Interest and sinking fund	$371,163	$519,425	$661,266
All other charges	488,447	619,126	752,363
Total	$859,610	$1,138,551	$1,413,634

It would require too much space to enter in detail into the exact amounts for which the commissioners estimate that a municipally conducted power plant could supply to consumers power for various purposes and in various localities. Suffice it to say, however, that they are assured the savings effected would be very large. Put concisely, these savings are calculated on a basis of 100,000 horse-power generated, at 45 per cent. on the arc light service, 21 per cent. on incandescent service, 69 per cent. on industrial motive power, and 77 per cent. on other motive power, the average for the seven municipalities being the basis.

The commissioners wish it to be understood that all their calculations have been made on a most thoroughly conservative basis, existing commercial costs being estimated at a low and proposed municipal costs on a high basis. Criticism is, of course, to be expected, but the basal fact remains that, supposing these estimates made on a reasonable basis, power and light can be supplied under a municipal development properly carried out, under engineering conditions equal to those of its commercial competitors, and at prices beyond the reach of permanent commercial competition.

* * *

THE YORK COUNTY LOAN EXPOSURE.

The investigation into York County Loan Company affairs continues, and day after day of the examination of witnesses affords fresh proof of the free-and-easy blundering, not to say reckless dishonesty, of Mr. Joseph Phillips in his efforts to find novel and fantastic means of investing the accumulating thousands confided to him by the house-maids and dairy-maids, the hostlers and farm laborers, of the historic county. Among his first moves was to buy some hill and hollow real estate; level the hills, raise the hollows—money was no object—and adorn the avenues of his Elysian Felds near High Park, with houses costing $3,000 to $10,000. Among his last was to launch a life company, and fit up a piano factory, with money of the loan company, which last enterprises, in the opinion of County Crown-Attorney Curry, "possess a cash value of $150,000; and it remains to be seen who are the real owners of them and who the dummies."

The Crown-Attorney by protracted questioning of Mr. Sanderson, Mr. Burt, and Mr. Robin, has elicited that Phillips or the company, or both (the book-keeping was so peculiar—and the conduct of the office so slip-shod, that is hard to say "who's who" in these matters of proprietorship), had an interest in the Lee grocery. The City Realty Company is another attachment of the main enterprise; this was formed to hold land in the west end of Toronto, which the York County could not so conveniently handle. What exact connection the Liszt Piano Company had with the York County Loan, is being enquired into as we write. Mr. G. R. Burt, its president, claims the business as his, but there is evidence that company money went into it, for $50,000 of York County Loan funds was deposited in Molsons Bank to the credit of the piano company.

The revelations of the working of this remarkable concern justify all that the "Monetary Times" and its correspondents have been saying or suggesting about it any time these ten or a dozen years past. The evidence at the investigation has revealed some interesting facts and figures:—

> Sixty-one thousand dollars paid out by the York Loan to the Liszt Piano Company on $800 security, deposited by Burt.
>
> Eight hundred dollars paid by "The National Monthly" for an automobile for Mr. V. Robin to use for the York Loan and the Toronto Life.
>
> Fifteen hundred to eighteen hundred dollars in profits paid by the printing company into the hands of Joseph Phillips.
>
> Two hundred and sixty-five Liszt pianos sold by York Loan agents at an average of $325 each—$86,125. Cost to York Loan $39,750. Commission to agents, $12,918.75. Net profit—to some one, $33,456.25.
>
> Paid out in five cheques from Liszt Piano Company's deposit in Bank of Montreal, to some one, yet unknown, $12,882.
>
> Money loaned by York Loan Company to printing company, $6,000.
>
> Money loaned to Clark Teaming Company, $3,000.
>
> Miss Georgina Hudson, one of the many young women clerks of the establishment, declared that the York County Company had an interest in the Roncesvalles Press Company, and also in the Roncesvalles Business College. The Lee Grocery was another beneficiary of the company's money. Miss Lillian Hudson, sister of the foregoing, gave evidence as to the counting-house conduct of the concern which appears to be a perfect exemplification of "don't care" and "do-as-you-like financing."

It is probably true that the chief peculiarities of this man were vanity and a great impudence. Sir Richard Steele was wont to say that "a true and genuine impudence is ever the effect of ignorance without the least sense of it." In whatever matters Phillips was ignorant, however, he was not ignorant of the credulity of men, and (especially) women; and upon this he played joyously, as upon a pipe, for ten years. And his careless effrontery stuck to him even when, further bail having been refused, and he was last week being searched before commitment to the common gaol, he said, with a smile: "Well, they've got a hard job to prove." His relations to these young women named will, one may hope, be established. In the meantime, it looks as if he had planned to enrich them out of York County Loan Funds, and they in turn were resolved to do any thing and every thing he instructed without any question of its ethics. We conclude with an extract from the evidence, as given by Wednesday's "Globe":—

> Questioned as to her salary, Miss Hudson said she received $25 weekly from the York County Loan Company, $15 from the Toronto Life Company, $10 from the Liszt Piano Company, and $5 from "The National Monthly." The last amount her sister was apparently receiving part of, so Mr. Curry estimated Miss Georgina Hudson's salary at $52.50 per week, or $2,730 a year.

* * *

HUDSON BAY TO LAKE SUPERIOR.

An editorial notice of plans proposed for securing early commercial access to Hudson Bay via Ontario, is given by the Toronto "World," of Monday, under the caption of "Hudson Bay for the Yankee." The tenor of the remarks seems to be that because a route can be found which will render the transfer of the sea food of that great Canadian sea to vast markets in the United States easy, expeditious and economical, therefore the benefits of the new supply must go to the consumers in the United States rather than to the Canadian producers.

This impression is contrary to the fundamental laws of commerce. The final price of a commodity is dictated by the producer, and the cost of delivery is in addition to his price, which may make it undesirable to the buyer and prevent a sale. Hence cheapening of the cost of delivery is so much added to the sale profits of the producer.

With a sea-port in Ontario, where the sea food produced in the northern waters is concentrated, the market value will be established at that point in view of the time and cost of shipments to an adequate market. If this cost can be reduced the net return to the Ontario seller is correspondingly increased; therefore, the enquiry in the interests of Ontario should be:—What is the most economical route to market both as to time and cost? The money paid by the consumer goes to the producer, and this in the case of the Hudson Bay fishery industry will bring a new source of wealth to Ontario with the luxury of fixing the price of what it has to sell.

Delay in reaching this position involves the loss to this Province of a great sum, possibly millions of dollars annually, which the enterprise and capital of its citizens should now be gathering in. It is admitted by the "World" that there is a great deal to be said in favor of the scheme which has during the month of March been outlined for its readers by the "Monetary Times." We quote as follows from the "World" article:—"The argument for a direct route from the Arctic Circle to Chicago, [St. Paul, St. Louis], is that, in any case, the population of Ontario which could be served with Hudson Bay fish will not be large enough to consume a sufficient quantity of that edible to pay for a railroad; whereas, by making the directest communication with United States territory, there is immediately within commercial reach a population of 30,000,000 people, to whom fresh fish is at present a costly luxury." The conclusion of the writer is that:—"Here, then, is a scheme which has many appearances of feasibility, and which the Ontario Government may soon be invited to support. It may cause other parties interested in lines of communication with Hudson Bay to hurry up their plans."

* * *

PROFESSIONAL AUDIT AND STANDARDIZATION OF MUNICIPAL ACCOUNTS.

Compiled by Mr. Edmund Woodroffe, C.A., Ont.

From the recent English mails we gather the latest steps in the movement among publicists, economists, and representative bodies, to control more closely the spending powers of the British municipalities and urban councils. One of the more important is the conference of Chambers of Commerce, industrial (masters') associations, municipal and local authorities, delegations, and professional societies, convened by the "Municipal Trading Committee" of the London Chamber of Commerce. This convention was held on March 5th, at the Whitehall Rooms, Hotel Métropole, and among the influential attendance were to be seen Lords Avebury, Brassey, and Rothschild, representing the London Chamber of Commerce; while the Scotch Institutes of Accountants and Actuaries; the English Institutes of Chartered Accountants, and Incorporated Accountants; the Institute of Bankers; and numerous federations of trade employers in the United Kingdom were represented by leading members. Mr. Felix Schuster, banker, presided.

The first resolution was moved by Mr. Thomas F. Blackwell, (president of the London Chamber), and was in these terms:—"That this Conference expresses its regret that effect has not been given to the recommendations of the Joint Select Committee on Municipal Trading (of 1903), as regards appointing professional auditors of municipal accounts."

In moving the resolution Mr. Blackwell recognized the excellent work which had been done by the municipalities of all the large cities and towns of the United Kingdom, and that all residents enjoyed benefits unknown forty years ago. The conference was not called to discuss the debatable question of municipal trading, but surely the most strenuous supporters could not object to the accounts of the municipalities being kept correctly and skilfully. As ratepayers, every one would feel it right that the accounts should be examined by independent and professional auditors, who should be satisfied that the money had been well spent in the public interest for the benefit of the people.

Mr. J. M. Fells, F.S.A.A., (London Chamber), in seconding, said he was one of the witnesses before the Joint Committee of seven members of the House of Lords, and seven of the House of Commons. Eleven sittings were held, twenty-nine witnesses examined, and over four thousand questions asked and answered. The recommendations of the committee were not framed in a spirit hostile to the municipalities; but, on the contrary, the merit of their report is shown by the fact that persons in favor of municipal trading and those opposed, are equally in accord with its conclusions. It was difficult, he declared, to decide what it is that keeps the Governments of the day from acting upon the report; except, perhaps, the permanent officials of the Departments involved by the suggested changes.

It was moved by Mr. C. Charleton, (deputy-chairman, London Council), "That this Conference is convinced of the desirability of securing as far as possible the standardization of municipal accounts *on business lines.*" It might be considered that the sting of the resolution was in the tail. The principal points to be defined were the *Sinking Funds*; and, even more important, the question of *Depreciations*, which has not been adequately treated in numerous municipalities' accounts. There should also be an actual distinction between all departments, as there is in all well-conducted businesses; and, in arriving at the profit and loss accounts, all these accounts should be based upon "income and expenditure," and, not merely upon "cash receipts and cash payments."

Mr. Dixon H. Davies, of the Industrial Freedom League, seconded, and pointed out that vital differences occur in the methods of various authorities of keeping accounts, rendering them to the ordinary economist really valueless from the point of view of comparing the cost or the profit or efficiency of various undertakings.

Mr. Fells pointed out that recommendation No. 9 of the Report states:—

> The committee are doubtful whether it would be possible to prescribe a standard form of keeping accounts for all municipal or other local authorities, having regard to the varying conditions existing in different districts. But they recommend that the local Government departments should invite the Institute of Chartered Accountants, the Incorporated Society of Accountants

> and Auditors, and the Institute of Municipal Treasurers and Accountants of England and Wales, the Society of Accountants in Edinburgh, and the Scottish Institute of Accountants, Glasgow, to confer and report upon the matter.

After discussion upon the retention or deletion of the words "*on business lines*," parts of amendments were adopted, and the resolution was enlarged by the recommendation, that:—

> So far, as possible, the standardisation of municipal and local accounts on business lines, and recommends that so far as practicable such accounts be kept on the basis of income and expenditure, and also that trading and profit and loss accounts be prepared yearly of the various commercial undertakings of such authorities

The amended resolution was carried without dissent. Resolution No. 3 proposed by Mr. Fisher, (London Chamber), and seconded by Mr. C. Hewetson Nelson, F.S.A.A., (Liverpool Chamber), sets out:—

> That this conference while welcoming the departmental committee recently appointed to enquire and report with regard to "the systems on which the accounts of local authorities in England and Wales, etc.," should be kept, is of opinion that it should be strengthened by the addition of independent members connected with practising accountancy, having regard to the recommendations of the joint select committee on municipal trading.

Of the appointees to the Departmental Committee, seven out of eight were connected with the Government officials, or their departments. The only independent accountant was one who certainly carried weight, being the president of the Institute of Chartered Accountants, Mr. John Gane, F.C.A. It was seen that the committee ought to be strengthened in the discussion of the professional and independent audit system advised. The resolution was adopted. It was decided the committee should at once ask leave from the president of the Local Government Board, the Right Hon. John Burns, M.P., to give a day upon which to receive the resolutions.

THE LIFE ASSURANCE ENQUIRY.

In one of our insurance exchanges from the United States, the "Chicago Argus," it is remarked upon the investigation which has been begun into the life insurance companies doing business in Canada, that: "Right at the start the statement is made that there is no question as to the solvency of any one of them. Had the Armstrong committee reassured the people of the United States at the beginning instead of at the end of their inquiry, a great deal of suffering and hardship might have been saved to the beneficiaries of misguided and scared policyholders." And the journal goes on to say that it is very significant that, in looking over a great proportion, fully three-fourths of life policies lapsed during 1905 were for amounts of $2,000, and under. This, the writer contends, is likely to have been the result of the blind and violent attacks of certain newspapers upon life assurance people and institutions generally, causing poor and ignorant folk to cease paying premiums under the impression that their insurance was no good. Holders of large policies, who had better sources of information, did not so sacrifice their policies.

The Canadian investigation, so far as it has proceeded, shows that there were irregularities on the part of certain life companies, some of which are unmistakable, and others of which, with respect to investments for example, are characterized as such under the Insurance Act as it is interpreted by the Department of Justice. But it is not practical to draw any general conclusions as to the adequacy of the Act or the punishment of companies at the present stage of the enquiry. Nor would it be fair. It is quite possible that some companies may be prejudiced at the moment by a partial presentation of their affairs before the Commission. At any rate, complaint to this effect has been made by one or two companies, coupled with a demand that they be allowed to be heard in explanation of certain circumstances. Some of the writing about certain companies that has been done already by newspaper editors and their correspondents consists rather of abuse than of reasonable argument, and is not calculated to do good but rather to unsettle the minds of people already insured or intending to insure.

The New York "Monitor," in commenting upon the Canadian commission thinks there is a prospect that it will be more fair in its methods and more intelligent in its findings than the New York one. Respecting the attack made upon one of the Canadian commissioners, that journal says that even if some of the life insurance companies may be found to hold stock in companies of which Mr. Langmuir is a director, "The fact in itself would not have any importance, or in any measure disqualify Mr. Langmuir; but it might be sufficient to send the yellow dailies and ten-cent magazines into spasms." However, in view of Canadian conservatism, and with the example of the Armstrong Committee before them, it continues, "we do not believe that our friends across the border will indulge in any extravagances that will work injury to the great and beneficent institution of life insurance, or injustice to the companies that are carrying on the business."

Meanwhile, the commissioners have secured the services of Miles M. Dawson, the well-known New York actuary, and will resume their sittings in a short time.

ADDENDUM TO THE FEBRUARY BANKING REVIEW.

Some sentences were left out of our Financial Review in last issue. As part of the closing paragraph the following should have been incorporated, where dealing with current loans and public deposits. Current loans, it was remarked, had increased in three years 42 per cent.; i.e., from $331,640,000 in February, 1903, to $414,233,000 in the same month of 1905.

Total assets have increased from $822,959,000 to $828,518,000, being $104,741,000 more than in February, 1905. This is certainly a most extraordinary record, even for a year of unexampled progress. In the year ending 29th February, 1904, total assets increased from $613,850,000 to $659,000,000; and by the 29th February, 1905, a further increase to $723,777,000 had been recorded, being $109,927,000 in the two years. Now we have in one year an increase of $104,741,000, or very nearly as much as in the two previous years combined. There is no reason to doubt that on the whole the assets are now of as good a class as they were two or three years ago, but the feverish anxiety for business which some of the banks are now showing gives us occasion to wonder whether applications for credit are in all cases considered as carefully and dealt with as conservatively as they should be.

DRY GOODS.

A rapid survey of several of the wholesale dry goods establishments of Toronto, and advices received as to the same trade in Montreal, shows that while, for the moment, there is some degree of inactivity in certain branches of the trade, the general feeling is one of entire confidence for the future. The dullness, such as it is, is discernible in the demand for cotton goods, and consists in a slowness on the part of retailers to lay in a stock for more than absolutely immediate requirements. It is quite easy to account for this, though, as the trade thinks, the reason is one which can scarcely be said to hold water. Prices of textiles are very high, particularly since the upward movement of last month, and there still seems to be an undoubted disposition on the part of a large number in the retail trade to believe that a decline must surely come before long. We have already attempted to explain on what a slender foundation these hopes of a coming downward movement rests. The fact that raw cotton made a considerable slump two weeks ago is discounted when it becomes realized that all such fluctuations at the present time are largely of a speculative character, which is indicated the more strongly by its having risen again within two or three days. The truth is that the changes in quotations of raw material are almost purely of a nominal character, and represent but slightly the actual buying and selling values. The values on which are based the present prices of finished goods were made and allowed for months ago, and it is quite probable that if any change at all takes place in these, it will be in an upward rather than a downward direction.

A feature in the cotton goods branch of the trade is the slowness and unsatisfactory character of deliveries by manufacturers, and this applies even more strongly to those in the Old Country than those here. We were informed by one wholesale dealer that the filling of an order for an important staple line of goods, given on April 19th last year, is only being completed this week. This is one feature which tends to cause unsettled conditions. The market for woolen staple articles is a very firm one, and all indications point to continued high prices. Values at the London wool sales are tending upward; English domestic trade is improving; Yorkshire yarn spinners are very busy; all of which factors have their influence over the tone of this market.

Business in spring dress goods opened up very auspiciously, and this has gone on, and in fact increased until the present time. Greys are a very prominent feature in all makes and styles, while a tint, a little out of the common, which is also favored is cream, especially in serges. Solid colors are the rule but stripes and faint checks are also popular. Broadcloths and voiles are often in demand. Eoliennes in black, green, and rose are also seen in fairly large proportion. Prices on many lines of fall dress goods in the European markets have already advanced, and this may be the beginning of a general upward movement.

* * *

MUNICIPAL SINKING FUNDS.

There are a number of Canadian municipalities which do not exercise a sufficiently keen oversight of their sinking funds, a matter which called forth some caustic comment the other day from the Private Bills Committee of the Ontario Legislature. The remarks came up in connection with the town of Trenton, which was trying to provide for the consolidation of a debt of $53,267 by the issue of water-power debentures, the sinking fund having been used for maintaining water-power for industrial purposes, and the returns therefrom not having come up to expectations. Mr. Carscallen, chairman of committee, gave the Trenton people to understand clearly that the subversion of sinking funds is a step that must not be resorted to under any circumstances, and seized the opportunity to explain that his advice was by no means confined to Trenton. Another town which had failed to make deposits on sinking fund account was Brockville, in 1885, 1889, and 1892, and this deficiency of $4,097, with a further loss in the reduction of interest rates from 4 1-2 to 3 1-2, renders it necessary to borrow $10,000 to pay into the fund. In order to provide accommodation for the fire department, $7,000 is required. A bill enabling the town to raise these sums by debentures and loan was reported. Part of the plan is to construct a theatre and public hall. There is no question as to the honesty of the town officials in these requirements, but aldermen and officers should take warning, and realize that sinking funds must not be trifled with under any circumstances.

* * *

WESTERN BOARDS OF TRADE.

Wednesday and Thursday, June 13th and 14th next, have been fixed as the dates for the third annual convention of the Associated Boards of Trade of Western Canada. The second convention was held at Regina last June under the title of the Associated Boards of Trade of the North-West Territories. Special arrangements have been made with the Canadian Northern and Canadian Pacific Railways for the transportation of delegates at greatly reduced rates and there is every prospect of a convention at the enterprising truly typical Western city of Edmonton proving an unqualified success. The growth of that city and of the marvellously fertile country surrounding it is making such rapid strides that it is difficult to keep pace with it, and such gatherings as the one announced, besides making possible a valuable interchange of opinions regarding the best needs of the whole Western country, will do much to keep the minds of visitors *en rapport*. The gentleman having the arrangements for the convention in hand is Mr. F. T. Fisher, the energetic secretary of the Edmonton Board of Trade.

* * *

OCEAN ACCIDENT AND GUARANTEE CORPORATION, LIMITED.

What strikes one first, in perusing the report of this company for the year 1905, is the extent of its operations. A revenue of close upon five millions and a half dollars for the year implies an extensive business. And truly the operations of the Ocean Accident are extended enough, for it does business in every British colony, in France, Germany, and Japan, as well as in the United Kingdom and the United States. Another thing that strikes one as unusual is the provision in the company's balance-sheet of extraordinary sums under the heading of "General Insurance Fund." Here, besides the provision for liability on unexpired risks, we find *two millions* put aside for "claims outstanding," and in addition $505,000 for investment reserve and general contingency account. These, we venture to think, are unusual provisions, and decidedly conservative. No such relatively generous provision has ever been made, to our knowledge, for possible claims. And, indeed, the half million for investment reserve over and above the other reserves is also most liberal, since the list of £1,452,000 in securities, which we have seen, is one of the cleanest possible. Still, the resolve of the company seems to be to make its dispositions to have its policyholders safe at all hazards. This attitude probably accounts for the high standing of the company's shares in the British market.

The variety of kinds of underwriting done by this company is considerable. It is not only accident and guarantee but hospital indemnity, quarantine indemnity, and other features which are guaranteed under its policies on attractive terms. Workman's liability insurance is done on a very broad but a very safe scale, and this is a relation which means great responsbility to a company and necessitates plentiful provision against litigation. The company's literature sets forth its scale of indemnity for loss of life or limb or sight or partial disablement, and the premiums combined with the terms which they represent are very liberal indeed when compared with what used to be offered years ago. This company's Triple Indemnity Policy, for example, under which the payment in case of death is trebled, provided it happens on a steam railway conveyance, is a most attractive one. Whatever liberality the company shows, however, is not, we believe, by reason of benevolence alone, but because experience has taught that it can afford to do what it has promised and is financially able to perform.

* * *

ROYAL-VICTORIA LIFE INSURANCE CO.

An increase in new business of more than one-third over the previous year is shown by this company, which is encouraging when we recall what news has come within twelve months from the United States to frighten people from taking out insurance. There is also shown by the Royal-Victoria at the end of 1905 an increase of $440,000 in total insurance in force. The cash income of the company is shown to have increased from $150,091 in 1904 to $160,308 last year. And, what is a very important item, the ratio of expense to income shows a *decrease* of about five per cent. in the last twelve months concurrently with an increase of thirty-seven per cent. in extent of new business.

Turning to the statement of assets and liabilities, we find an increase of fifty thousand dollars in total assets. Not having been furnished with the list of investments we cannot say what they consist of in detail. But we remark that an explanation has been given by the company as to what the insurance department has described as unauthorized securities which appears to indicate that the company does not propose to evade the law. Of the $1,294,000 of assets, the sum of $800,000 consists of subscribed but unpaid capital. The remainder is made up of $494,000 of Canadian bonds and debentures owned; $110,000 of loans on bonds and stocks, deferred and outstanding premiums, $48,000; cash $20,000; loans on policies, $31,000; and sundry assets $18,000.

* * *

COMMONEST CAUSES OF FIRES.

Statistics of fires in Massachusetts cities and towns during 1904 are given by the report of the Insurance Commissioner for that State in a series of tables. The total fire loss embraced 4,727 houses; 3,661 frame and 1,066 brick or stone, valued at $117,806,522, and the loss thereon by these fires was $6,451,093; insurance loss thereon $5,238,209. Boston's share of the fire loss was 631 frame and 649 other buildings; total loss $2,311,121. The following table shows the principal causes of fire. We select the chief of some forty causes tabulated:—

Cause of fires.	No. of fires.	Loss.
Unknown	281	$916,521
Incendiary	242	450,677
Careless smoking	153	242,951
Careless use of matches	392	302,901
Children and matches	293	73,964
Cigar or cigarette stubs in wooden spittoon	113	71,879
Curtain and goods exposed to gas, candle or lamp	222	49,380
Defective chimneys	244	258,851
Explosions of various kinds	132	74,874
Hot ashes in wooden receptacles	90	54,333
Kerosene lamp or stove taking fire, upsetting or breaking	266	107,002
Lightning	110	359,306
Malicious mischief	114	28,210
Overheated furnaces, stoves or fireplaces	177	159,643
Overheated kerosene stoves	135	96,309
Rats and matches	146	116,700
Sparks, of various kinds	484	181,435
Spontaneous combustion	159	625,741
Spontaneous combustion of oily rags	67	198,389

Here are nineteen principal causes of fire, involving a fire loss of $4,309,000—the "unknown" causes, however, account for $916,521 of this, and lightning for $359,000 more. All the rest, except incendiary fires and some of the explosions, could have been prevented by reasonable care.

* * *

BANKING AND FINANCIAL.

It is announced that the Bank of Montreal opens a branch at Saskatoon on Monday, 2nd April, with Mr. K. A. Ashworth as manager.

Lyman J. Gage having resigned the presidency of the United States Trust Company of New York, Mr. E. W. Sheldon has been elected to succeed him.

The Crown Bank already has branches in the Eastern end of Ontario, e. g., at Kingston, Odessa, Enterprise and Seeley's Bay. They are now opening at Napanee, where Mr. Bennett Laing will have charge of the branch.

We have been told that Mr. E. L. Pease, general manager of the Royal Bank of Canada, arranged during his recent visit to Mexico City to open a branch there. The Bank of Montreal has established a branch in Mexico, as we recently announced.

Word comes from Brantford that W. J. Stewart, accountant in the Standard Bank in that city, has been appointed manager of the Standard Bank at Ailsa Craig. Last week a number of citizens presented Mr. Stewart with an address and a purse containing one hundred dollars.

The Royal Bank of Canada has opened a branch at Montreal Annex in charge of Mr. W. H. Ronald. The same bank, it is stated, has purchased land for a bank building to be erected at Lunenburg, N. S., for a branch. The Bank of Montreal intends also to erect a fine building in Lunenburg.

Word has come from Orillia that the Merchants Bank of Canada has opened a branch here in the Wallace Block in that town. During the coming summer the bank intends erecting new and permanent quarters on Peter Street, near the post-office. Mr. F. L. MacGachen, late manager of the Meaford branch, has charge of the Orillia branch.

On Tuesday last there were sold by auction in Toronto 5,000 shares of Consumers' Gas stock. The prices realized ranged from 200 to 201⅞, which shows a considerable decline in price as compared with December 1904, when the city of Toronto was the purchaser of a bunch of stock. Most of the purchases are said to have been for investment, and some of the stock being taken by insurance companies.

Some pretty mistakes come of the confusion of dollars with pounds. One of recent perpetration led sub-editors all over England to give the new fees for trading licences in Quebec in hundreds sterling instead of in Dominion currency. But will any such excuse apply to a fable that has gone the round of the financial papers. It has been said, first, that 180 lots of building land in Edmonton (Alberta) realized £8,000 per acre, and again that they fetched £4,000 per acre. Both stories cannot be true, and if either were true such an evidence of gambling insanity would create a very bad effect in responsible financial quarters.

The Canadian Bank of Commerce is to open a branch in Wingham, Ont., under the management of Mr. A. E. Smith, whose private banking business at that point will be taken over by the bank. This bank has announced that new branches have recently been opened at the following points:

—Gleichen, Alta., Mr. J. S. Hunt in charge; Humboldt, Sask., Mr. F. C. Wright, manager; Langham, Sask., Mr. W. J. Savage, manager; Leavings, Alta., Mr. H. M. Stewart, manager at Macleod, in charge; Radison, Sask., Mr. C. Dickinson temporarily in charge; Stavely, Alta., Mr. A. B. Irvine, manager at Claresholm, in charge; West End, Montreal, Mr. H. B. Parsons, manager.

The number of branches that the Sovereign Bank has in the Province of Ontario is 57, and we are told that the total number of its branches is 62. The new branches and their managers are as follows: Essex, Ont., with C. H. Lloyd, formerly of Harrow, as manager; Penetanguishene, Ont., with A. P. Smith, formerly of Markham office, as manager; Goderich, Ont., in temporary charge of H. J. Rance; Brucefield, Ont., sub-agency of the Clinton branch, with R. T. Dunlop as manager; Millbank, Ont., a sub-agency of Milverton, Ont., with E. W. Horne as manager. We are told that F. V. Boultbee succeeds C. H. Lloyd as manager at Harrow, Ont.

Incorporation of companies under various State laws of the United States were large in March, though not so large as they were in January. Including companies having less than $1,000,000 authorized (not necessarily issued) capital, the total was well over $300,000,000; exclusive of the smaller concerns, the total was $277,973,000, compared with $202,650,000 in February and $411,945,000 in January. The grand total for the first three months of this year is $892,568,000, an increase of $485,073,000 over the corresponding period in 1905. The 1906 total, at the present rate, will approach the record of 1901, $3,714,105,000. A feature of this month's list is the large proportion, over one-half, that were chartered outside the Eastern States. The growth of the mining industry, especially the copper branch, is responsible for the flotation of quite a number of big enterprises.

INSURANCE ITEMS.

There were eighty-six fires in Montreal during March last compared with only fifty-five in the previous March. There were 33 alarms with no fires, 14 false alarms and 4 automatic alarms.

We are advised that the partnership between Arthur White and John Earls in Toronto, general insurance agents, has been dissolved by mutual consent. And also that Arthur White and James McVittie have entered into partnership, and intend to carry on a general insurance and brokerage business.

Here is a timely reminder: We find it in one of the little memo-books issued by the North American Life:—"Changeable weather? Yes—but quite seasonable. Be careful of yourself. Many a death has been caused by thoughtless action during April. Get insured. That will be the best point gained."

Mr. Miles Menander Dawson, the well-known New York actuary, was in Ottawa the other day and consulted Mr. Shepley, K.C., in reference to the insurance investigation. It is understood that Mr. Dawson gave the chief counsel a lot of information as to the methods used in extracting evidence at the New York State investigation.

Report has it that the wealthy Sea Insurance Company, of Liverpool, is to add to its marine operations, insurance against fire and miscellaneous other contigencies. The assumption is that the Sea office will not fight the Fire Offices Committee, which now represents about 22 millions sterling of premium income. Perhaps example will give food for thought to the Thames & Mersey Company and other great marine institutions.

Giving a commission to every individual who happens to control a fair-sized line of fire insurance is one of the worst evils the underwriter has to contend with. The practice has been carried on for years and every effort to discontinue it has been met with strenuous opposition. In Colorada the insurance department has taken a hand and expects to confine the business of "insurance agent" to those who make it their avocation.—Argus.

We learn with interest that the Legislature of the State of Kentucky has quite recently passed a fire-marshal law for the protection of property in that State from the ravages of fire. It provides, we are told, for a deputy insurance commissioner to be designated as fire marshal, with a salary of $2,400 a year, who is empowered to take testimony by oath and institute prosecutions against incendiaries.

"Temperance" writes from Sydney, Cape Breton, to ask if it is true that, as he is informed, life policies "can be had by teetotallers for about two-thirds and perhaps one-half what tipplers pay." We are under the impression that "Temperance" has got hold of the wrong story. No such enormous difference in rates is made by any company, so far as we ever heard. It is, however, true that the death rate among total abstainers has repeatedly been shown to be less than that among hard drinkers, and even, we believe, among moderate drinkers. It was proved so in Canada by the Temperance and General Company, and has been proved so in the Old Country. For example, in an experience of twenty-two years by the Abstainers and General Life, established in Birmingham in 1883, it maintained an "abstainers" class and the ratio of actual deaths was only 47.4 per cent. of the expected, under the actuaries' table. The United Kingdom Temperance and General has had a longer experience, favorable to the greater longevity of total abstainers.

FOR GROCERS AND PROVISION DEALERS.

By a supplementary Blue Book issued by the British Board of Trade, an error is corrected in connection with Canadian trade. The value of the imports of bacon from the Dominion of Canada in 1904 was given at £1,865,159, whereas the consignments from Canada to Great Britain were actually £2,719,488, the difference of nearly a million being credited to the United States, from whose ports consignments were largely shipped in the same holds with other classes of Canadian meat. There must be many similar cases of such miscrediting of the source of origin of goods arriving in the United Kingdom, but it is gratifying to learn that such errors are corrected on occasion.

We hear of an important business deal from Ottawa. The Keewatin Flour Mills Company, Limited, composed of for the most part Ottawa people, having been sold to the Lake of the Woods Milling Company, Limited, for, they say, $950,000 in bonds and cash. The Keewatin company has a paid-up capital of $750,000. The Keewatin Company's mills and elevator, which are transferred by the deal, are in course of erection at Keewatin, Ont., three miles from Kenora. The mill buildings have a capacity of 6,000 barrels of flour daily, but the machinery contracted for is for 4,000 barrels capacity. The remainder of the machinery, however, can be installed without stoppage of the mill. The elevator adjoining has a capacity of 500,000 bushels of grain. Both buildings are of reinforced concrete.

DRY GOODS NOTES.

The large Montreal uptown departmental store of W. H. Scroggie, Limited, has, we understand, been purchased by S. Carsley, Limited, for the large sum of $665,000. In the property is included a large new structure.

We hear from Peterborough, Ont., that Brintin's, Limited, of Kidderminster, Eng., a well-known carpet manufacturing house will establish in the first-named place a branch factory to employ between fifty and a hundred hands. The negotiations for a site of eight acres were successfully carried through by Senator Cox.

The Dunlap Cooke Company of Canada, Limited, has been granted a charter by the Dominion Government authorizing it to take over the businesses now carried on by D. Cooke & Co., in Nova Scotia, and to transact a general fur costume, clothing, outfitting, millinery, mantle and hat trade. Mr. G. W. Cooke, of Amherst, and J. H. Doody, of St. John, are charter members. The chief place of business will be Amherst, and the capital stock is fixed at $250,000.

—We obtain from the Carberry "Express" some particulars about the coming summer fair of the Norfolk Agricultural Society of Manitoba. The prize list is being revised, especially in the horses and cattle classes; and they are handsome prizes, too. For example, in the heavy team classes the prizes are as follows: First, $20; second, $15; third, $10; fourth, $5. "The special grant of $500 given by the Provincial Government, the North Cypress grant of $300, and the grant from Carberry, together with the usual provincial allowance, will give the directors enough money to put on a show second to none in Manitoba outside Winnipeg and Brandon."

—It is announced by the Government of Ontario that the portion of the Gillies timber limit,, which is believed to be particularly rich in mineral wealth, is to be held by the Province and developed for the benefit of the whole people. It is understood as well that this implies the decision to erect a Government-owned reduction plant, which would treat ores not only from the district named, but at a fair price, those from private mines. Cobalt miners in the past have had to send their ores to New Jersey smelters, the owners of which have had them at their mercy. The step contemplated is a new departure, but one, which apparently meets with general satisfaction, though it has not escaped criticism. A later announcement states that the mineralized and other parts of the limit are to be thoroughly investigated by Prof. Miller

—St. Boniface, the town just across the river from Winnipeg, has decided to expend large sums of money, or almost half a million dollars, for local improvements in the present year. The question of buying the two principal bridges at present owned by private corporations was discussed at a recent meeting of the council, and it was finally decided to offer to purchase Norwood bridge from the Norwood Improvement Company for $75,000, provided that the company would give the Norwood cricket grounds to the town of St. Boniface as a public park. It was also decided to offer to purchase Broadway bridge from the Red River and Assiniboine Bridge and Navigation Company for $50,000. Tenders will be called for the paving of the principal streets of the town with asphalt, bithulithic, creosoted wood block and asphalt block pavement. The curbing to be of stone. Contracts for the new fire and police station were let to Twambly & Co., the cost to be $7,300. The construction will be started at once and it is expected that before the fall the building will be ready for use.

—The Sixth Congress of Chambers of Commerce of the British Empire is to be held in London, beginning July 8th. The Montreal Board of Trade has not yet completed its list of delegates for the occasion but so far Mr. F. H. Mathewson, the president, Mr. Geo. E. Drummond, Mr. G. L. Cains (managing director of Greenshields, Limited), and Mr. Geo. Hadrill, the secretary, have been named. We have not learned that any delegates have yet been appointed by La Chambre de Commerce of that city. The following are the names of the delegates appointed to represent the Toronto Board of Trade at the Congress:—Messrs. A. E. Kemp, M.P., W. F. Cockshutt, M.P., Brantford; J. W. Woods, J. P. Ellis, J. D. Allan, D. R. Wilkie, W. J. Gage, R. J. Christie, Noel Marshall, C. W. Band, J. D. Ivey, C. W. I. Woodland, Lt.-Col. G. T. Denison, and F. G. Morley.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ending with Thursday, April 5th, 1906, as compared with those of the previous week:

	April 5th.	March 29th.
Montreal	$27,788,466	$25,296,910
Toronto	22,795,812	18,578,393
Winnipeg	8,060,973	7,071,105
Halifax	1,647,042	1,147,994
Hamilton	1,515,569	1,156,534
St. John	1,011,675	875,934
Vancouver	2,269,021	2,328,927
Victoria	957,446	934,829
Quebec	1,495,255	1,247,350
Ottawa	2,820,615	2,224,910
London	1,136,325	798,700
Total	$71,498,199	$61,661,585

THE BRITISH HOUSE OF COMMONS.

To classify the members of the new House of Commons according to their vocations is not easy, for members rise superior to the rule of One man, One job. Something like 140 of them are concerned directly with commerce or industry, and about 30 are engaged in some paths of finance. But beside your laywer, your commercial member is a dumb dog, and there are 140 lawyers in the House. There are 8 professors and 6 schoolmasters. The man who wishes to get a sober word of business in, even edgewise, will have to be alert amongst this mob. Twenty-nine members describe themselves as journalists; some to explain their motor cars and fur coats, and some to cloak their more nefarious operations. Were one to go patiently through the list and take note of the fewness of members who have had a commercial training and career I do not think anybody would call the commercial interest other than under-represented at Westminster.—Mercantile Guardian.

THE NEWFOUNDLAND FISHERIES.

The Government of Newfoundland, we understand, proposes to provide a bounty on herring cured by the Scotch process and exported and in other ways to develop the undoubtedly large piscatorial resources of the island, which during latter years have gone largely to the benefit of fishermen from the neighboring Republic. A sum of $40,000 is to be appropriated for the purpose of carrying on an investigation into the movement of the shoals of herring around the coast, in order to find out where they go to when they leave the shore. A drift-net fishing steamer is to be obtained from Scotland and will be operated along the coasts of Newfoundland and Labrador during the summer and fall, locating the cod fishing grounds and affording the fishermen good object lessons, not only in how to handle, pack and prepare for export the "Scotch-cured" herring, which commands such good prices, both in Europe and America. It is not perhaps generally realized that the Scotch herring fisheries employ no less than 42,000 men and 17,000 women and girls, besides 2,400 coopers in making barrels, and that the annual product is worth $10,000,000 a year. Of course, before any such results as these can be achieved in the island colony, the population will have to increase greatly and markets will have to be found and exploited, but there is no reason why a material development of this very important asset should not follow the Government's present efforts.

At the present time the difficulty is to know where to locate the herring during a large portion of the year, as they withdraw altogether from the shores of Newfoundland. Similar withdrawals have taken place before. For instance, twenty years ago, Labrador was famed for its extensive and profitable herring fisheries. Suddenly they disappeared. Placentia and Fortune Bays, also fifteen years ago, were the home of this fish, and attracted large American fleets every season. This year, it is stated, not a single vessel sought a cargo there.

Various efforts have been made in the past of the Canadian Government to foster the herring industry, notably that by the late Mr. Prefontaine in 1904, reference to which has been made before in these columns. Operations were carried on by a steam fishing trawler, and though the catch, for various practical reasons, was small, the results from a market point of view, particularly in Russia and Germany, were very encouraging. The packing of herring from the Pacific coast has also been attempted with some success, though a defect has been found to consist in their fatness.

It is contended that the adoption of its proposed plan by the Newfoundland Government and the offer of a bounty of $1 per barrel, on the exported product, will create a new industry for that colony in which the Americans will be unable

to participate because the prime factor in its prosecution is the ability to land the catch in convenient harbors and there gut, clean, pickle and barrel them for export. The Americans have no landing rights on any part of that coast where herring resort, and they only enjoy the liberty of entering some of the waters were these fish are taken. Consequently, if the deep-water habitat of these fish can be located and the shoals of herring are as abundant as expected, an industry will be set on foot which should be of a very profitable a character. It may also be said that there is an almost unlimited market for Scotch-cured herring in the United States, which usually has to depend on left-over stock from Europe.

* * *

SAINT JOHN BOARD OF TRADE.

We received on Monday last a copy of the report for the year 1905 of the Saint John Board of Trade, a pamphlet of seventy-three pages, with six illustrations, very well done, showing the water-front of the city, Queen Square, the railway bridges and reversible falls, and different views of the harbor. The council's report to the board gives in full the paper read by Mr. S. Schofield before the Transportation Commission, referring in the main to the harbor, its advantages, and the expressions of opinion by important men of the resolve that Canadian products should go seaward from Canadian ports. Steel shipbuilding, West India trade, and a fast Atlantic steam service were other matters considered by the board. The delegates from St. John to the annual meeting of the Maritime Board of Trade, which was held at Yarmouth, N.S., in August, were W. S. Fisher, E. M. Abbott, H. C Tilley, L. G. Crosby and J. N. Sutherland. Among the resolutions introduced at that meeting by the St. John Board of Trade and adopted was this:—

> "That in the opinion of this board the time has arrived for a union of the three Provinces of New Brunswick, Nova Scotia and Prince Edward Island, and that a memorial to this effect be forwarded to each of the Governments that they be urged to arrange for a meeting of representatives from each Government at an early date."

Evidently the Tourist Association of St. John was an effective handmaiden of the Board of Trade, for it received and answered a thousand letters, and there were nearly another thousand strangers registered at its Information Bureau. It secured besides excursionists to the number of 200 to 300, consisting of the Michigan Press Association, which brought them, some days or weeks afterward, some seventy-five written different descriptions of the attractions of St. John.

The president's report, giving a brief account of his stewardship, remarks that the council has taken steps to determine whether cheap power for the manufacturers of the city and neighborhood can be developed at the falls of the St. John. There are abundant statistics embodied in the report, embracing comparisons of exports for different winter seasons, total imports and exports, annual shipments of lumber from 1888 to 1904, grain and live stock shipments, etc.

* * *

PARAGRAPHS FROM OUR AUSTRALIAN LETTER.

South Australia is rejoicing in harvesting a record number of bushels of wheat—twenty-one million for the State. The yield equalled 11½ bushels per acre, which is a phenomenal one for that dry country.

United States exporters are complaining of the advantages given to Canada in the reduction of duty on interior freight on goods shipped via Vancouver. So far it has not resulted in anything, but it is presumed that the complaint will be taken up by the United States Government.

In spite of the Compulsory Arbitration Act three strikes are now under weigh in this State. The trouble between capital and labor is varied every now and then by strife between the sundry unions. Though the Act has not prevented strikes, yet it is probable that the strikes are not as severe as they would be were there no Act. The existence of a measure for settling industrial strikes has brought public opinion to bear against strikers and that goes a good way towards repression. In New Zealand the Court has recently not only refused to increase wages but also refused to give preference to unionists. Should there be many such decisions as that the value of the Act in that colony will be tested, which it has scarcely hitherto been.

A previous letter told of the disappointment of a number of Canadian farmers who came here from the North-West in the hope of finding a better climate and of obtaining land on better conditions than it could be had in Canada. They have gone back to Canada by the steamer that carries this letter. They came to Sydney and found the climate of this city to be too warm for them, and when they read that it was twenty degrees hotter in the farming districts of the country than in the city they came to the conclusion that the Australian summer would be harder to bear than the Canadian winter. They went to Tasmania, where

the climate was much more suited to them, but they found that if they took up the land which they could cultivate they would have to pay a price very much beyond what they considered its value and if they took up virgin land the cost of clearing would be greater than for which they could buy the finest land in Manitoba or the North-West, while the yield would be less, so they have gone back poorer but wiser men.

THE PROTECTION OF TIMBER LIMITS.

One day last week there was an important meeting of lumbermen of the Province of Quebec held in Montreal, the president being Mr. F. B. Buck, of Sherbrooke. The meeting was held under the auspices of the Limit Holders' Association, but the special business under discussion was the grievance which has arisen under what the lumbermen regard as the unwise and unjust timber policy that has been pursued in the Province for years. The practical object which the lumbermen had in view was to take organized action with a view to preventing the breaking up of the timber reserves for bogus settlement. Several of the owners of large limits do not object to bona fide settlement; on the contrary, they welcome it, but find that the limits are being spoliated, the choicest of the timber lands getting into the hands of squatters, who are the instruments of speculators. The result is that the banks are turning upon the limit-holders and are refusing to give accommodation on the security of the limits. The situation is regarded as serious, and it is feared by those interested that advantage will be taken of the Government policy of throwing what are called colonization reserves open to settlement to make the position worse. Persons who have no intention of cultivating the soil will, it is contended, rush in and pick up the best of the timber lands and strip them of the timber, and thus deprive the limit-holders of the rights that belong to them. The lumber districts mostly represented were Saguenay, Riviere du Loup, the Eastern Townships, the Laurentian Ranges and the Ottawa Valley, while in timber limits alone it is stated that those at the meeting represented a value of $100,000,000, in addition to saw-mills and pulp mills.

* * *

A BANK CLERK'S SHAME.

The young bank clerk, Edwin St. George Banwell, who, when in the service of the Crown Bank of Canada, robbed it of $40,000 and ran away to the United States, and thence to the West Indies, taking with him a young girl, whom he married en route, was condemned a few days ago to serve four years in the penitentiary. And he was taken from the court-room along with several burglars or other malefactors, to whom he was handcuffed, the group being all bound for the same place of detention. Was he not overwhelmed with shame? What his feelings were, who knows? What they ought to have been, in the way of bitter repentance and a resolve to make his term of punishment a term of good behavior and moral self-improvement, is clear. But the apparently frivolous character of the young man tends to impair one's belief in his turning over a new leaf. The address of the judge to the prisoner on sentencing him is one that may be perused with profit by young men in positions of trust whom wild impulses may sometimes seize to do as Banwell did and "have a good time," even if they sweat for it afterward.

"You obtained the confidence of a young lady," said Judge Winchester. "You put yourself out of all respect, and you not only injured yourself, but the one you loved, by your action. You were engaged to a pure young woman, and you should have considered her.

"The smallness of your salary is no justification. Each of the many managers of our large institutions had no larger salary than yours when occupying a similar position.

"There are hundreds of young men like you throughout Canada, and if they get hold of the idea that possessed you it will be a sad day for our country.

"You have not criminal instincts, but you have been brought up in an honest home by an honest mother, in whom you have destroyed all ambition.

"I am going to punish you for the purpose of preventing young men following your course. I hope this will deter them from doing what you have done. I shall send you to the penitentiary for four years."

* * *

NORTH OF ENGLAND LETTER.

Not for the first time there comes into the British Legislature a desirable measure providing for limited partnership. Under this name, those who know the business methods of the Continent, will recognize their old acquaintance the business "en commandite." A means is wanted to facilitate the introduction of capital into unlimited companies, whereby an investor escapes liability beyond the extent of his original investment, with, of course, proper security to the creditors of the firm. This, Lord Avebury would supply by registering such partnerships, and making them operative for a fixed term during which the limited partner might not return unless all partnership debts were paid, or unless the unpaid creditors assented. He would prevent the limited partner from withdrawing, during the currency of the term, any part of his capital contribution and he would not allow the name of the limited partner to appear in the style of the firm. The Bill contemplates an arrangement wherby one or more partners should be liable only in part and the remainder liable in full for any losses. The proposals move in the right direction, and it can scarcely be doubted that some such would lend to the stability of affairs. A firm that by some misfortune or isolated indiscretion found itself in difficulties might thus gain the support that would tide over a temporary crisis and perpetuate its old connections. We can do with a weather-proof half-way house between the fully limited and the entirely unlimited concern, and Lord Avebury's Bill will, at least, lead to a fuller consideration of ways and means.

A proposal has been heard of, per cable, to authorize Canada's Commercial Agents in England to prosecute persons applying the word "Canadian" to goods of other origin. One does not know that the national name is frequently taken in vain. The temptation now is not so great as it may become when Canadian goods have established a clearer title to admiration. We buy Canadian cheese, bacon, butter, apples, and the like on the unsupported warrant of the salesman's word, which is not beyond risk of error. Branded goods speak for themselves, and, no doubt, with general truth. Outside of these, it is hard to recall any commodities known specifically to the private consumer as Canadian. One may, except Canada balsam and Canada (whet) stone—in each case pronounced Can-ah-da—but they are not articles in universal demand. This world, however, is thickly populated with dealers who see no harm in tagging-on to their inferior goods a well-reputed description to which they possess no right. All over the world the name "English" is most scandalously ill-assorted. In Paris, Berlin, Vienna, Madrid, St. Petersburg, Constantinople, and the further East that eligible title is attached to articles that are no more English than they are Choctaw.

But Canadians have a precedent, of a sort. The Belfast linen-traders lay traps for the incautious shop-keeper who sells towels or collars as linen when half of them is cotton, and they see that the defamer gets his deserts in the police court. Our Food and Drugs Act provides for the proper description and composition of certain medicines and comestibles. And, no doubt, a few convictions would put sellers on their guard as to the misuse of the word Canada. But, as sufferers ourselves, we are conscious that the embezzlement of our national name is not an undiluted misfortune. It is an advertisement as well as a species of fraud. The consumer who is observant sees that people of all sorts ape the name English and that sight strengthens his faith in the integral value of English goods. He is not always so stupid as to fail to detect flagrant impositions, and his disgust over the spurious imitation helps to heighten his

The Traders Bank of Canada.

Notice is hereby given to the shareholders of the Traders Bank of Canada that a special general meeting of the shareholders of said Bank will be held at the Banking House, 10 Front Street West, in the City of Toronto, at the hour of twelve o'clock noon, on Tuesday, the 17th day of April, 1906, for the purpose of considering, and if approved, of passing a By-law increasing the capital stock of the Bank owing to the great expansion of its business, and to consider the day upon which the Annual General Meeting shall be held, changing the date from June to January, and also to discuss the question of paying the dividend quarterly instead of half-yearly as at present.

Dated at Toronto this 26th day of February, 1906.

By order of the Board.
H. S. STRATHY,
General Manager.

esteem for the veritable original. Recognizing so much, it can still be said truly that some prosecutions by the Commercial Agents would also be an advertisement for Canada in their own different way.

The number of municipalities advertising their willingness to receive loans on deposit is yearly increasing. The security is that of the rates and, of course, bankers dislike this form of competition, and all the more because they are regularly outbidden. When one can get 3½ or 4 per cent. from a municipal corporation for short term deposits what is the use of leaving money in the bank at a seriously lower rate of return? How our district authorities absorb loan money will be apparent from the growth of outstanding balances in 20 years. In 1883-4, for the three kingdoms, these were £193,000,000, and in 1903-4 were £469,000,000; an advance of £276,000,000, or 143 per cent. Persons fond of putting a little money away without letting neighbors know too much about it, are investing their multiples of £50 in the funds of distant municipalities. Nor are such deposits always free of any suspicion of ulterior motives. One could name a commercial traveller whose neat little private fortune is in the hands of municipal bodies with whom he does business. Probably his shareholder's claim is not the only title he has to attention as a supplier of goods. Yet I am assured that he obtains enviable prices, and patently he drives a large turn-over. To a mere ratepayer this extension of the quid pro quo looks at least questionable.

Westralian Commissioners of emigration are touring in the wake of the New South Welsh lecturers. They make much of the imports and exports, the gold production, the savings bank deposits and the increase in population these last ten years. But of the "Never-Never Land," the waterless deserts, traversable only by camels, a discreet silence is maintained. The inducements to immigrants are vague and the methods are those rather of general advertisement than of individual conviction. One phrase is worth especial notice: "In productivity Australia is far ahead of Canada," as an argument that is less telling than the assisted passage which can now be had at $35 or upwards.

English makers of automobiles are going to make a reasonably good exhibit of cars at the Toronto and Montreal shows during next month for the motor trade in Canada has been the subject of consideration by the Automobile Club. Our makers have as yet an all but inexhaustible home market. The 40,000 to 50,000 cars in active service in this country by no means represent the limit of consumption, and most of these are French. Only now is the British maker getting a really firm hold of our insular business, and without puffing any one make it can be said that the typical product has the traditional British stability to recommend it. Others may be speedier and neater, but the English car has a good name for its solid merits, and probably the American has the worst reputation of any foreign automobile known here.

NORTH COUNTRY.

Manchester, 20th March.

* * *

—Important news has come from Port Arthur as to the feasibility of using an ice-breaking steamer to free the harbors of that place and Fort William from ice in the early spring. It will be recalled that something of the kind was agitated for last year. Now we learn by a press telegram, dated 3rd April, that an ice-breaking boat named the "Whaler" has loosened ice barriers in Port Arthur harbor, and for the first time in the history of the ports at the Canadian head of the lakes a steamer has gone round the harbor this early. The strength of the breaker was a revelation to the residents. The vessel easily plowed through ice from 25 to 32 inches thick. This demonstration seems to insure from two to four weeks more of navigation yearly for our northern ports.

SAVES 50 PER CENT.

The C.-C. Bank-Seal Perpetual Ledger marks the initial step in the last stage of perfect accounting by the Copeland-Chatterson Systems for Business. It was designed specially for Banks, Brokerage Offices and Financial Institutions.

In Banks and Financial offices where old methods of accounting are used there is an actual loss of 50% of Clerical Service Value occasioned by the duplication of work, slow process of entries, confusion of innumerable books and records, and the consequent inability to find the thing wanted quickly.

All this can be remedied by installing a Copeland-Chatterson System for financial business. It is economical, ingenious and automatic.

The book-keeping is handled intelligently without effort on the part of the accountant. Balances are struck without over exertion or work after regular hours.

Our experience is world-wide and embraces every detail of accounting in banks and financial institutions.

Write us for particulars.

The Grand Trunk Pacific Railway, it is said, will petition the Government to allow 50,000 tons of steel rails to be imported from the United States free of duty as the rail mills in this country are all too busy to undertake the order.

A new company for the sale of automobiles is being organized in Toronto under the name of the British and French Motor Company, Limited, and with Mr. John J. Palmer, of the Toronto Type Foundry, as manager. The Caledonian Rink, on Mutual Street, we understand, has been purchased for a large garage and repair shop. Several makes of British and European cars will be kept in stock. On the former there is, of course, a preferential charge of 33 1-3 per cent. off the regular custom duty.

Mercantile Summary.

A company which was recently granted a charter from the Ontario Legislature for the purpose of making, buying and selling leather, hides, wool, furs, hair and other animal products is the Sarnia Tanning Co., Limited, of Sarnia, Ont,, with an authorized capital of $40,000.

The London Machine Tool Company, Limited, will establish in Hamilton, Ont., a factory for the manufacture of machine tools and all classes of iron, wood and steel-working and mining machinery. The company's share capital is placed at $200,000. J. M. Harr and Samuel Moore, of Norwalk, Ohio, are prominent leaders in the scheme.

Amusing correspondence from the other side of the world is sometimes printed by the "Mercantile Guardian," of London. Here is a communication from West Africa, presumably to a British export merchant:

"Dear Sir,—I am with much affectionate to Write you this letter to say that I have seen your name in Magazine, so try your best and send me your Catalogue and so therefore you must hope me, and send me the catalogue. when you receive this letter send me as quickly. dont you forget me, and I also too. I have nothing to say again. I with best compliment to yours. I am yours faithfully, &c."

A judicial abandonment has been made by Tellier & Farley, who began business at Berthierville, Que., in April a year ago, dealing in dry goods and shoes. Tellier had previously been in business alone, selling out in 1903, and Farley had been clerking in Waterbury, Conn., where the watches are made. They were thought to have fair prospects, and their so speedy collapse is unexplained. Their liabilities approximate $10,000.

The consumption of lumber in Western Canada is illustrated by the figures which follow: The Crown timber office at Winnipeg has issued statistics showing the amount of lumber consumed in Manitoba and Saskatchewan. The total aggregates 379,901,189 feet, of which 37,015,821 feet was imported from the United States, 116,000,000 feet brought from British Columbia, and 82,000,000 feet from New Ontario. There was an increase of nearly 38,000,000 feet over the preceding year.

The Long Lake Company, Limited, has been incorporated under an Ontario charter for the purpose of acquiring and carrying on the milling business and power plant now conducted at Long Lake, near Cobalt, in Northern Ontario, by Stephen and William Ryan, and to purchase or lease and utilize water or other powers for the production of electric, pneumatic and hydraulic energy. Solomon White, of Windsor, Ont., and T. P. Watson, of New Liskeard, Ont., are leading members of the concern.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

A company has been organized under the name of the Yucatan Power Company, Limited, with a capital stock of $1,000,000, to carry on the business of an electric light, heat and power company in all branches.

Recently we noted the failure of Ludger Lavoie, general merchant, at St. Louis le Grand. He now makes an offer of 25 per cent., cash.—L. Marcoux, another late insolvent in the grocery line at Weedon, Que., has arranged a settlement at 50 cents, cash, liabilities being about $2,200.

The Montreal Board of Trade has opened a fund for the relief of the sufferers through the famine in Japan. Consul-General Nosse, to whom the amounts raised in Canada have been turned over, has already sent several large remittances to the Japanese officials charged with the distribution of the relief contributed by foreign countries.

The failure recently noted of W. C. Balcom, of Hantsport, N.S., the ship building, fruit-growing, stock-raising jeweller, is creating unfavorable comment. A Montreal creditor states he has a statement made by Balsom within a year claiming a surplus of some $40,000, and it will be interesting to see how he accounts for the great deficiency.

A ladies' tailor in Moncton, N.B., Nathan Erron, is in trouble for the second time within a few months. In October last he arranged to pay 45 cents on the dollar, but now finds himself unable to carry out even this settlement, and is asking his creditors to accept 25 per cent. on their claims, which amount to about $2,500. Is it possible that his lady customers did not pay him for his "creations?"

The sale of a Cobalt mine is thus announced: The McKinnon and Dareagh mine, in Coleman township, has been sold to F. B. Chapin and associates, of Toronto. The price was in the neighborhood of $700,000, and the terms were spot cash. The mine already has shipped over $200,000 worth of ore. The new owners have taken possession, and will install an up-to-date plant at once, and propose to employ a hundred men.

The manager of the Canadian Pacific Railway hotel system has announced that the company's expenditure on the hotel improvements and enlargements now or soon to be carried out would amount to $500,000. This did not include the company's new hotel at Winnipeg, which would cost $1,500,000. At the company's recently enlarged hotel at Banff extensive alterations were being made for tourists. The other smaller mountain hotels, such as the Lake Louise Chalet and Mount Stephen House at Field, and the hotel at Glacier, were having new wings that would provide much additional accommodation.

Mercantile Summary.

Another oil well has been struck at Tilbury East, and there is considerable excitement in the neighborhood.

It is said to be the Dominion Government's intention to erect a ten-storey receiving warehouse in Toronto adjoining the Custom House on the west.

The Miller Cartage Company, Limited, Toronto, has been incorporated with a share capital of $100,000. Besides conducting a general cartage and forwarding business, it will manufacture harness and vehicles.

A Montreal haberdashery firm named Descent & Brisebois have assigned on demand. They started in business as tailors and clothiers only last June.—Frank McCorry, saloonkeeper, of the same city, who has been frequently sued of late, has also assigned, and his liabilities reach a total of $7,900.

The work of double-tracking the Michigan Central Railway between Tilbury and Ridgetown has been begun. W. E. Tench & Co., of Detroit, have been given the contract, and they have sub-let it. When completed, the road will be double-tracked from Windsor to St. Thomas. Work is to be finished by July 1st next.

From Cornwall, Ont., we learn of the failure of W. H. Dunkin, long engaged in the grocery trade there. He has always had the name of being a liberal dispenser of credit, with the result that he has generally been considered slow pay. G. C. Colquhoun, of Cornwall, has the estate in hand.—W. Manders, in the same line of business, at Smith's Falls, Ont., has assigned to A. L. Derrick.

Andrew Dods and Gideon Grant, solicitors, of Toronto, have their names down in last week's "Ontario Gazette" in connection with a corporation which is to be known as Imperial Coaches, Limited, with a capital of $225,000, which proposes to purchase, lease, manufacture and deal in power machinery and automobiles, omnibuses and other vehicles, and operate them for the conveyance of passengers.

Formerly a farmer, Joseph Bohemier, of Ferme Neuve, Que., began storekeeping in the summer of 1904 on a capital of $700, realized from the sale of his farm. In this step Joseph was ill-advised: *ce n'etait pas son métier*, so to speak, and besides, the very name of the locality, *"Ferme Neuve,"* signifies New Farm, and it is away back in Labelle county, near the Gatineau River. He had no experience of mercantile affairs, and apparently little natural aptitude for business. During the past autumn he was sued on several occasions by creditors for small amounts, and he has now assigned on demand.—Napoleon Richer, of St. Hyacinthe, Que., was also a farmer. He started in the hotel line in the spring of 1904. His assignment is now reported. "Back to the land" should be his motto now.

DEBENTURES FOR SALE

CALGARY SCHOOL DISTRICT

Tenders addressed to the undersigned for the purchase of $90,000 of Debentures of the Calgary Protestant Public School District No. 19 in Blocks of $10,000 each will be received until 4 o'clock p.m., April 9th, 1906.

PARTICULARS

Total amount of issue, $90,000.

Rate of interest, 4½% payable yearly.

Principal repayable in 30 equal consecutive annual instalments with interest at the above rate, at the Imperial Bank of Canada, Calgary.

Purpose of issue: to erect and equip one solid stone school building and one solid brick school.

Total assessed value of School District, 1905, $5,433,469.

Estimated true value of taxable property within the limits of the District, $8,000,000.

Total Debenture debt of the District exclusive of the present issue, $80,098.

Value of property owned by the District, $190,000.

School rate of taxation, 1905, 7½ Mills.

Population of the District (City of Calgary), 16,000.

Tenders will be received for the whole amount or for one or more blocks of $10,000.

The highest or any tender not necessarily accepted.

W. L. WAINES,
Secretary Calgary Public School Board,
Calgary, Alberta.

Truly, the great little town of Cobalt, that New Ontario hummer, doth take unto itself a more and more metropolitan character every day. The latest, according to the official gazette, is a company being formed to compile records and distribute information as to stocks and bonds of mining companies, and—above and beyond all this—to "provide and regulate a suitable building or rooms for a Stock Exchange," etc. Horatio Claude Barber is the name of one of the prominent organizers of this up-to-date concern.

Mercantile Summary.

A voluntary assignment has been been made by Hypolite Rousseau, general dealer, at Ste. Francoise, Que., to Lefaivre & Taschereau, Quebec. He is said to owe only about $2,000.

A larger bridge is needed at Keene, in Peterboro' county, Ont., owing to the raising of a dam on the Trent Valley Canal and the consequent increased height of water. The Dominion Government is being asked for aid to build it.

A plan is said to be on foot to effect a consolidation of the smaller coal properties in Cape Breton, and including all the mines and coal areas in that region not at present held by the Dominion Coal Company. The capital of the new company, it is contemplated, will be $30,000,000.

The Slave Lake Power Company, Vancouver, has begun active work on the construction of a dam, headworks and other permanent improvements. Already machinery has been purchased, and the work of construction is to be rushed through so as to complete everything by the middle of September. A sub-station is to be erected in the east end of Vancouver.

The International Gold Dredging Company, Limited, Ottawa, has been chartered to quarry, dredge, smelt, stamp, refine and prepare for the market, ore, metal and mineral substances, to buy and sell machinery and mining appliances, to construct roads, ditches, power stations, dams, aqueducts, etc. The total capital stock will be $1,000,000, and among those interested is C. M. Farley, of Ottawa.

A number of buildings are to be erected in Peterboro' during the present year, and prospects are bright for a busy twelve-month. A new twelve-roomed public school, costing $35,000, will be erected in the South Ward. A $30,000 Separate school has been completed in the central part of Peterboro'. It is expected that work will be begun on the new $100,000 armory in Central Park. Tenders are also being called for the new $30,000 County House of Refuge at Lakefield. We are also told by the newspapers that large additions will be made to the works of the Canadian General Electric Company. The American Cereal Company has just completed a five-storey extension to its mill, costing $35,000, and has begun the manufacture of several new food products—molasses feed for horses and cattle, and puffed rice, the latest breakfast delicacy. A new 600-barrel flour mill was recently installed. Senator Cox has sold eight acres to the Brintin Carpet Company, of Kidderminster, England, who will establish their Canadian branch in Peterboro' and employ 100 hands. The Peterboro' Sandstone Brick Company is erecting two large buildings just outside the city limits, and will be turning out brick by May 1st.

A Firm of Manufacturing Agents

ONT WIND ENGINE & PUMP CO. LIMITED
TORONTO, ONT.

The Burrard Power Co., Limited, are completing their plans to develop the water-power of Lillooet Lake, B.C., and tributary streams for the purpose of generating electric power for light, heat and manufacturing purposes. They purpose installing a plant capable of generating 5,000 h.p. at first, and increasing it to 20,000 h.p. as the demand increases, at a cost of $500,000. The power-house will probably be located on the banks of the Fraser River, near Port Haney. The length of the flume, ditch and pipeline required to utilize the available head of 325 feet would be as follows: Flume, two miles; ditch, four miles; wood stave pipe, three-quarters of a mile, and steel pipe, a quarter of a mile. They have been granted by the Provincial Legislature 25,000 miners' inches of water from the above water system.

Mercantile Summary

It is believed in Ottawa that the Grand Trunk Railway has sold its Parry Sound branch to the Canadian Northern Railway.

The pumping engine recently bought by the city of Toronto for nearly $250,000, and with a capacity of 15,000,000 gallons, has just been tested, and the result shows that it is 4½ per cent. above the requirements called for.

We learn from Ottawa that the contract between the Dominion Government and the Allan Steamship Company for the carriage of the trans-Atlantic mails has now been completed on behalf of the Government. The bargain is for five years from next summer, and provides for the addition of two new eighteen-knot boats to the Allans' fleet.

A demand of assignment has been been made upon Desirè Levesque, general storekeeper at Ste. Anne des Monts, on the Gaspe coast.—Last summer Gustave Chouinard, of St. Elie d'Oxford, Que., formerly an insurance agent, began storekeeping in a small way. He has already become involved, and has arranged to pay his creditors 20 per cent. of their claims, for which proportion, it appears, they are disposed to settle.

The New York Lumber Company have finished their cut of lumber off the tract of 45,000 acres near Gasperaux Lake, N.S., which they purchased from Mr. S. P. Benjamin, of Cornwallis, N.S., and are now awaiting the break-up of the ice in the lakes to raft down 4,000,000 feet of it. It will then be hauled to the mills at Kentville, converted into deal, when the greater part of it will be sent by train to Kingsport and shipped to New York and other American ports.

The charter possessed by the Hamilton, Caledonia and Lake Erie Company has been extended by the Ontario Railway Committee, so that it now has to be built to Caledonia in two years, to Dunnville in four years, and the whole within five years. The company also seeks confirmation of its power to bore for gas and to build a pipe line for the conveyance thereof. The committee are still discussing this point, objection having been made to the exportation of gas or to any connection with monopolies in the United States.

What is termed the fastest passage on record from Liverpool to a Canadian port is announced from Halifax on 29th March, thus: The Allan Line steamer "Virginian," with a total of 1,582 passengers, 572 of them first and second cabin, arrived at Halifax from Liverpool at seven o'clock this evening after the fastest passage on record. Her time of passage with mails on board was six days and five hours, beating the best previous record (her own) by nine hours. She followed the long course, and passed 300 miles south of Cape Race."

OUR TRUCKS are fitted with rubber tires that do not come off. . . . .

MONTEITH, NIXON & Co.,
MAKERS OF GOOD TRUCKS.
256 Macdonell Avenue, Toronto.
Telephone, Park 1318.

On Friday last there arrived in the harbor of New York eleven thousand immigrants, on board of seven steamships, from European ports. This number is the record for a single day which has been made thus far during the annual spring inrush. "To-day's arrivals include English, Irish, Germans, Swedes, Hungarians, Italians, Portuguese and Russians."

We, in this country, are accustomed to hear of the wonders of rapid mechanical production of certain merchandise as illustrated in the United States. Here we have from the London "News" word of the making by machinery of a boot in seven minutes. This is to be seen at Gamage's, in Holborn, London. Very likely this is in part the result of American machines. In any case the result is achieved in London.

It is stated by "Harper's Weekly," on the authority of a United States naval officer, that the present relative order of warship tonnage of the eight first-class powers is as follows:

Nation.	Tonnage.
Great Britain	1,537,682
France	614,045
Germany	415,824
United States	386,428
Italy	261,411
Japan	253,401
Russia	226,780
Austria	112,336

There is some idea of making the Elder-Dempster steamship service between this country and Mexico a fortnightly one, and it looks as though the development of trade of recent months would justify such an extension. Mr. D. W. Campbell, manager of that line, who has just returned from Mexico, says that Canada's exports in nine months to the republic have been $900,000, and that new and previously unthought-of fields of commerce have presented themselves, especially in the State of Yucatan, where the people are rich and extensive buyers of Canadian articles of export. The matter of return freights is important, and if certain things can be brought about, he believes our import trade will be considerable. It is understood that if the Government will apply the West Indian preference clauses to Mexico a good deal of sugar can be brought to Canada from the Southern Republic.

The Miramichi Mercantile Co., of Chatham, N.B., incorporated last September, with an authorized capital of $24,000, to take over the business of R. A. Murdock, has decided to go into voluntary liquidation, the arrangement not having proved satisfactory. It is understood the liabilities of about $10,000 will be settled in full.

The British Columbia Distillery Company is about to make extensive additions to its plant at Sapperton, including a three-storey shipping and bottling warehouse, a two-storey cooperage, and six large modern stock buildings. The approximate cost of the alterations is $60,000. A considerable quantity of new machinery will also be installed. Another important addition to be made this summer will be the erection of six large stock corrals, 156 feet in length and 56 feet in width. These will all be of the most modern design, and nearly 300,000 feet of lumber will be used in their construction. Three of the corrals will be for cattle and three for hogs.

It is announced that the Southern Counties Railway has negotiated agreements with the Grand Trunk Railway for running rights for its electric cars over the Victoria Bridge for a long term of years, and with the Dominion Government for rights in the district under the Harbor Board's present jurisdiction for twenty years. It is surmised that the bridge agreement provides for the use of one of the present roadways of the bridge for electric traffic exclusively, and has been drawn up with a view to possible future electrification of the entire train operation of the bridge. This culmination marks a great forward step in the movement to obtain good trolley connection between Montreal, St. Lambert, Longueuil and other points on the south shore.

As is generally known, the speculative deal of Pierpont Morgan in connection with several of the great trans-Atlantic shipping companies proved a good deal of a failure, and this fact has brought about several changes of more or less importance. For one thing, it would seem the English shareholders have now taken the upper berth, as it were, and Mr. Ismay, of the White Star Line, and not Mr. Morgan, is the presiding genius of the trust. From Liverpool and not from New York will now go forth the fiats of a combine representing the American, Atlantic Transport, Dominion, Leyland and White Star lines, together aggregating a fleet of 124 steamers of nearly a million tons, and a capital of many million dollars. Among the changes which it is believed are to occur in the management of the fleets is the one just decided upon by the White Star Line, to transfer their two celebrated liners, "Majestic" and "Teutonic," to the Dominion Line, which represents the Canadian interests of the combine. This has been done with the object of competing with the Allan Line for the growing passenger and mail trade between Canada and England.

TORONTO MARKETS.

Toronto, April 5, 1906.

Chemicals, Drugs, etc.—Trade generally is being carried on under normal conditions as to price and activity. As to values, there is very little change of an appreciable character worth chronicling. Opium, quinine and other staples are experiencing a somewhat quiet demand. Carbolic acid is easier, and so is cod liver oil. In New York there is a fair average demand for ordinary lines of drugs, but there is a general spirit of dullness.

Dry Goods.—In some lines of cottons there is a certain degree of inactivity discernible, probably due to the high prices. But this is a feature not likely to last unduly long, for retailers will speedily realize the slightness of any foundation for their hopes as to a decline. The only probable cause for such a decline would be a break-up of business activity in the United States and the consequent flooding of this market with goods from across the line, but of these contingencies there is not at present the faintest sign. Dress goods are in perhaps a more than usual state of activity, owing, we suppose, to the fine weather and premonitions of an early spring. The demand for millinery has set in extra early this year, and is particularly noticeable just now. The firmness in woolens, both domestic and imported, keeps up unabated.

Flour and Grain.—A steady market prevails for both wheat and flour. Ninety per cent. patents are quoted at $3.02½ to $3, with but few bids at higher than the latter. Bran and shorts continue strong and, to some degree, scarce, while the demand is brisk. Oatmeal is still on the easy side. Grains are nominally the same, with but a small amount of actual business passing.

Groceries.—Sugar is quite firm at the present advances. New York advices refer to similar conditions. The movement is fairly brisk. Tomatoes and corn are features in the canned vegetables department; both are scarce. Dried fruits present no feature, but there is a seasonable demand for currants and Sultanas more particularly. The call for prunes shows symptoms of falling off.

Hides and Skins.—There has been an all-round advance in hides and sheepskins, due not so much to any particular change in market conditions, but to the improvement in quality usual at this season, which has already set in in earnest. There is a normal enquiry for this time of the year.

Provisions.—Butter of good quality is in demand at unchanged prices. Cheese is still very firm around 14c. to a little above. Eggs are in fair abundance, the market keeping around 16c. for new-laid and 13c. for stored. Poultry is quiet, but for really choice there is a pretty good demand. No change has occurred of any moment in the smoked meat department. Lard is still firm.

Wool.—A few lots of new-clip wool have made their appearance in the market, but the supply cannot yet be said to have begun in earnest, as it has so far been in trivial amounts, and cut for some specific or extraneous reason. The season is expected to open up in about three weeks' time, and prices are likely to keep very much as they are at present.

The Great-West Life Assurance Company has never lost a dollar of principal or interest; has never shown a dollar's worth of Real Estate under foreclosure; has paid in full every estimate of profits on policies that have matured, and gives the security of a million dollars capital without cost to the Policyholders.

MONTREAL MARKETS.

Montreal, 4th April, 1906.

Ashes.—English enquiry is light, and business continues very dull. We quote approximate figures as follows: First quality pots, $5.15 to $5.20; second ditto, $4.65; No. 1 pearls, $7 to $7.25 per cental.

Cements and Firebricks.—The enquiry for cements is now fairly active. Canadian manufacturers are apparently not anxious to quote for large lots at the moment, claiming that any advance in American bituminous coal will necessitate a revision of prices. In the meantime we quote $1.90 to $2 for Belgian; British and Canadian, $2 to $2.20; firebricks, $18 to $23 per thousand.

Dairy Products.—The cheese market is comparatively strong, and some fair-sized sales are reported within the last week or so at from 13 to 13½c. per lb., pretty well cleaning up holdings in this market. It is reported that from 12¾ to 13c. is being asked for new fodder cheese in the country. Butter values are rather easier than a week ago, owing to more liberal receipts. New-milk butter is quoted at 22 to 22½c.; old creamery makes, 19½ to 22c.; dairy, 16 to 18½c. Cheese shipments last week, via St. John, Portland and Boston, are reported to have reached 21,575 boxes, and the total Montreal shipments since close of navigation in 1905 amount to 311,411 boxes, while through shipments are reported to the amount of 105,935 boxes. Butter shipments since the close of navigation are reported at 16,902 packages.

Dry Goods.—City retailers have not yet experienced any great activity in business, but are building on the more spring-like weather and the near approach of Easter to bring out the shoppers in greater numbers. Wholesalers are also disposed to describe sorting business as somewhat "draggy." There is a great demand for ribbons, but, as in many other lines, deliveries of these goods are very backward, and it is feared a certain amount of trade may be entirely lost. Collections as a whole are fair.

Groceries.—The movement is a moderate one, with no particular "snap" to it, and variations in values are few. Canned tomatoes are now held firmly at $1.20 in an ordinary way, and some dealers claim they will reach $1.40 before the new pack comes in, and also that American buyers are eager to pick up all available lots. Corn is unchanged as yet at 85c. Packers are reported to be asking $2.75 for gallon apples, and evaporated apples are strong at 11½c. in a jobbing way. Valencia raisins are in light supply and firmly held. Matches are dearer by from 10 to 50c. a case. Sugars are unchanged on the basis of $4.20 for standard granulated in barrels. An old price-list of the Canada Sugar Refinery, dated April 6th, 1866, came to light the other day, and it is interesting to note the great difference in prices as they were then and are now. Dry

(Official Report.)

The Royal-Victoria Life Insurance Co.

Renort of the Board of Directors and Financial Statement presented to the annual meeting, March 28th, 1906, and unanimously adopted:

DIRECTORS' REPORT.

Your directors beg to submit their report of the Company's business for the year ending December 31st, 1905, together with the Financial Statement and the Auditors' Report.

New Business.—The new business for the year was represented by applications for $1,254,325 of insurance, being an increase of 35 per cent. over the previous year, of which amount $1,121,775 was accepted and policies issued thereon, being an increase of 37 per cent. over the previous year.

Business in Force.—The insurance outstanding on the books of the Company at the end of the year amounted to $4,630,610, yielding an average annual premium of $32 per $1,000 insurance.

Payments to Policy-holders.—Claims by death under policies on 24 lives matured for $41,000 during the year. The claims paid amounted to $38,000, which included $4,000 outstanding at the end of the previous year. The claims outstanding in the course of settlement at the end of the year amounted to $7,500, and are included under liabilities in the Financial Statement.

The total payments to policy-holders, including claims by death, annuities and surrender values, amounted to $47,328, being an increase of $4,723.63, or 11 per cent. over similar payments made in the previous year.

Cash Income.—The cash income of the Company from premiums and interest during the year reached $160,308.65, being an increase of over $10,000 more than in the previous year.

Reduction in Expenses.—Notwithstanding that the new business of last year was 37 per cent. larger than in the previous year, the expenses to income show a further reduction of 5 per cent. over the year 1904.

Investments.—The investments of the Company continue to be made with judgment and care, as shown by the fact that not only has the interest on each particular investment been promptly paid on the date due, but the class of securities and their marketable value make the investments in every instance most desirable.

The Bonds and Debentures owned by the Company on the 31st of of December last, and deposited with the Dominion Government, amounted to $267,172.60, market value, details of which are given in the Financial Statement. The loans on stocks and bonds, amounting to $110,000.00, are secured by a marginal value over and above the amount loaned of $43,000.

Under the gradually improving conditions affecting life insurance in Canada the directors fully anticipate a still further increase in the new business of this Company for the year 1906.

All of which is respectfully submitted.

DAVID BURKE,
General Manager.

JAMES CRATHERN,
President.

FINANCIAL STATEMENT.

For the Year Ending December 31st, 1905.

crushed sugar was then quoted at 12½c.; ordinary crushed, 12c., and No. 2 yellow, 9½c. per pound.

Hides.—The American market for calfskins is somewhat firmer, and local dealers are now buying at the rate of 13c. for No. 1, and 11c. for No. 2. Beef hides are unchanged at 11c. per lb. for No. 1, and lambskins at 10c. each. The movement is not brisk.

Leather.—The local demand from shoe manufacturers is just moderate, but good English enquiry is reported for splits, and prices in this line are much firmer, some Western makers having advanced quotations full 2c., bringing best grades up to 25c., while Quebecs are quoted at 19c. All other lines are firmly held.

Metals and Hardware.—All the warehouses of these goods display much activity, and orders are said to be still coming in well. As regards prices, few changes are to be noted, and last week's full report will fairly apply to-day. Spelter is a little weaker at 6¾ to 7c., and lead is also a shade easier, but hardly quotably so; tin is firmer at 41 to 41½c., and for antimony 19 to 19½c. is now asked, owing to great scarcity.

Oils, Paints, etc.—The attention of houses in this line is fully absorbed by the shipping out of the orders which have been accumulating for several months past. In values the only reported change is a decline of 3c. in turpentine, the present figure for single barrels being now 95c. per gallon. All other lines remain as they were.

* * *

SCARCITY OF LEATHER IN ENGLAND.

The trouble over the shortage of leather in Leeds, Leicester and other great English consuming centres is thus set forth by the Leeds "Trade Journal":

The great scarcity of all descriptions of leather suitable for boot and shoe manufacture has brought about an acute crisis in the trade, and very heavy losses have been suffered. Manufacturers who had booked large orders for delivery in March and April now find that it is impossible to secure adequate supplies of leather, and what they do secure can only be purchased at a great advance in prices. It is impossible to meet the contracts placed except at a very heavy loss, and the position has become so bad that large manufacturers declare that nothing like it has been experienced for fifty years. Manufacturers are compelled to appeal to buyers to revise and to pay enhanced rates on the orders already placed. Where this is done manufacturers will be able to tide over their difficulties, but where buyers insist upon deliveries in accordance with the terms of their contracts enormous losses will be suffered. Leicester is by far the greatest leather consuming centre in the Kingdom, and it is a noteworthy fact that nine-tenths of the leather used comes from America. The imports from Australia are nearly all bottom leather, and the French and German tanners have been completely put out of the field by the Americans. The leather-dressers in America produce nearly all the glace kid and box calf now so extensively used for uppers, and American red sides are also very heavily consumed. The great scarcity in skins in America thus practically dominates the English market. From a great variety of other causes, including the greater demand for leathers for Japan, the world's supply of hides has for the present been overtaken by the consumption. Evidence of this is furnished by boot and shoe manufacturers offering

to buy ten to twenty tons of certain kinds of leather at the prices quoted by sellers, and having their orders declined because the supplies were not procurable. Leather merchants have very small reserve stocks, and under existing conditions they are absolutely indifferent to business unless the extreme limit of the enhanced rates is paid.

There is, at the present time, says another report, an enormous shortage of leather, in order to meet the requirements of the boot and shoe manufacturers in England, and necessarily there is a large demand for hides of all kinds, both dry and wet, also sheepskins.

The total importation of hides into England during 1905 was in the neighborhood of £1,700,000 sterling, and of this amount less than £18,000 came from Canada, whilst during the fiscal year 1904-1905 there was an export to the United States of $2,629,116. The prices offered here at the present time are exceptional, and it is felt by Canadian trade agents that the hide exporters in Canada would do well at the present juncture to get in touch with the leather men of England.

The Crown Life Insurance Company

DOMINION MARINE ASSOCIATION.

The annual meeting of the Dominion Marine Association took place in Ottawa on the 22nd March, Mr. W. Cuttle, of Kingston, the president, in the chair. There was a large attendance of delegates from many parts of Canada. A satisfactory report was presented of the year's business.

Deputations were formed to wait on Hon. H. R. Emmerson and Hon. L. P. Brodeur, to ask that the repairs on the Cornwall Canal be rushed, in order that the water may be let in in time for the opening of navigation. It was decided to ask for more new lights and buoys on the St. Lawrence and Great Lakes, and a deputation, headed by Mayor Riddell, St. Catharines, asking that the gas pipes be retained in the Welland Canal, which is to be lighted in future with electricity, was appointed. This was requested because of the fact that the entire canal would be in total darkness if anything went wrong with the electric apparatus.

Mr. King, secretary of the association, said that one of the most important subjects which they had to present to the Minister was that of the tonnage tax imposed on Canadian vessels entering United States ports, and the hospital tax imposed by Canada on vessels entering ports in the Maritime Provinces, Quebec and British Columbia. Ontario was not particularly interested in the request, in view of the fact that hospital dues were not charged at Ontario ports. The tax amounted to six cents per ton, and if it were removed it would carry with it under the United States law the removal of a tonnage tax of fifteen cents a ton imposed on Canadian vessels in that country. They, therefore, asked for the removal of this tax in view of the great benefit which it would confer upon Canadian vessels generally.

* * *

The overflow of water from the River Thames between London and Lake St. Clair periodically causes a good deal of damage to property. It was suggested the other evening in the House of Commons that if the channel were dredged from the mouth of the river into deep water in Lake St. Clair these floods might possibly be prevented and millions of dollars be saved. Owing to the improved drainage system the river was called upon now to take care in three or four days of a volume of water the disposal of which was formerly spread over as many weeks. A cut-off to Lake Erie or St. Clair was suggested as a remedy.

The Metropolitan Life Insurance Co.
(INCORPORATED BY THE STATE OF NEW YORK)

The Company OF the People, BY the People, FOR the People

ASSETS, $151,663,477.29

Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec, Ottawa.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395	per day in number of Claims Paid.
6,972	per day in number of Policies Issued.
$1,502,484.00	per day in New Insurance Written.
$123,788.29	per day in Payments to Policy-holders and addition to Reserve.
$77,275.94	Per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave., New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $3,0000,00.00

More Than $7,000,000.

Over and above premiums received, more than $7,000,000 has already been paid or credited to its policyholders by the

A Policy-Holder's Company

The North American Life Assurance Company has a Guarantee Fund of $300,000, of which $60,000 is paid up in cash. Interest is allowed on this paid up portion only. Policyholders thus obtain additional security of $300,000 and what is of greater importance, are assured of careful and conservative management as the Guarantors are liable for this amount. By the Company's Act of Incorporation, every holder of a participating policy in the Company, upon which all premiums due have been paid, shall have one vote in person for each $1,000 of insurance held by him. Policyholders are thus given a voice in the management of the Company's affairs. In short, it may be said that the North American Life is neither a Mutual nor a Stock Company yet possesses the advantages of both.

VIEWS ON THE NIAGARA POWER SCHEME.

Ontario municipalities have not allowed the grass to grow under their feet since publication of the report of the Ontario Power Commission made the question of a municipal power plant a live one, and many representative bodies have met together and arrived at very definite decisions in connection with the important matters involved. London, as is to be expected owing to its close connection with and pride in Hon. Adam Beck, who has been so energetic in the labors of the commission, comes out flat-footedly in favor of some such plan as is proposed.

The Toronto Board of Trade held a luncheon especially to discuss and ventilate the matter, and the result of its deliberations was an unflinching decision on behalf of the establishment of a power plant on the lines laid down.

Mr. Peleg Howland, the president, said he could conceive of no greater boon to the people of the city, province, and the country than the establishment of such a plant as the one recommended by the commission. This province having no coal supply sufficient to insure cheap power, had to consider the question of the cheapest means of developing our water power.

Mr. P. W. Ellis expressed the opinion that there was no reason why the plant should be limited to 60,000 or 100,000 horse-power. It need only be limited by the requirements of such municipalities as are willing to join in the project. He believes that sufficient water can be diverted from the Niagara River above the Falls to develop all the power needed by this province without injuring in the slightest degree the scenic beauty of the neighborhood.

Both the council and the board of trade of Stratford believe in the proposed power scheme, and were represented in the deputation to the Ontario Government calling for it to be put into operation. The council passed the following resolution:—

> That, having read the report, we are deeply impressed with the great project of supplying the Province of Ontario with power from this source, not only for manufacturing, radial railways and lighting, but the many uses it may serve and the great boon it will be to our farming community also. Further, we heartily approve of the Government reserving to the people of this province the advantage of this great natural source of wealth instead of allowing the few to heap up fortunes thereby.

On the other hand, public feeling at Niagara Falls itself is running strongly against the proposals. On the 6th, a meeting was held to protest against Government development or control. Mayor Slater voiced the sentiments of the majority apparently when he expressed willingness that any municipality or combination of municipalities should be allowed to develop power at their own risk and expense, but protested against development by the Government, or against the Government's pledging the credit of the Province to support any developing enterprise.

The following from three resolutions which were passed almost with unanimity, suggests the arguments used in a municipality which has at least as much at stake as any other:—

> It is not a business that the province should undertake, being as yet in an undeveloped stage, and one which is not used by the great majority of the people whose credit is pledged in its support, and further, it would be pledging the credit of the whole province to the success of an enterprise that only at best would accommodate a small portion of the province, and, while we would give every facility in our power to any municipality or group of municipalities that should lease the right to generate and transmit electricity, we believe they should do so at their own risk and credit, and not at the risk and expense of the whole province, and they should pay taxes similar to private corporations. . . . That in view of the fact that the province never expended a dollar at Niagara Falls to create or assist in creating power, but is in receipt of a large revenue from the same, therefore, this city has the same right to the advantage of its being located at the fountain of electrical current as if a coal mine had been discovered, or a gas-gusher struck, and that the whole people would receive more benefit should the province undertake to deliver the above products, than they would

> by the generating and transmission of electricity. . . . That there is no more good reason why the province should generate and transmit electricity at and from Niagara Falls than from the Ottawa River, the Sault Canal, or any other location where water-power can be produced, the fact that it looks like a profitable undertaking should have no effect on the advisability or justice of the proposition.

Incidentally, some very bitter feeling has developed between the city authorities and Mr. Beck, the latter, it would appear, having stated that the council were instigated in their opposition to his "chimerical electrical power scheme" by outsiders, and that body having absolutely denied that there is the slightest foundation for the charge.

In Brantford still another phase has presented itself; the gas company having announced that they can supply natural gas for both power and light cheaper than the rate promised in the municipal power report. Brantford wants electric energy principally for industrial power, and if the gas company can deliver power cheaper, there may be opposition to joining the scheme of municipal power development.

* * *

GREAT LAKES COMMERCE.

The growing commerce of the Great Lakes of North America has at various times in the last forty years caused a demand from vessel-owners for successive deepenings of the connecting rivers between the lakes. St. Mary's River, flowing southward from Lake Superior; the flats of St. Clair River and Lake; and Detroit River, both of which latter are between Lakes Huron and Erie, have all needed to be deepened. At first, the requests of the vessel men were for no more than a depth of twelve or fourteen feet, increasing in more recent years to seventeen, to twenty, and now to twenty-two feet. But for the last fifteen or twenty years the cry has been for "a twenty-foot channel in all great harbors and connecting rivers," and this is what the American navigators believed they had got—only they could not load their steamers, whose size had meanwhile grown, safely beyond eighteen feet draft, a restriction which they resented.

Quite recently, even before twenty feet depth of water is every where secured, there has arisen a demand for a twenty-two foot, and by some a twenty-five foot channel through the connecting waters of the Great Lakes from Chicago on Lake Michigan, and Duluth on Lake Superior to Buffalo, on Lake Erie. This great stretch of fresh water embraces a thousand miles, and is crowded with steam and sail craft for five months of the year, to an extent that is scarcely paralleled on any route in the world. And United States engineers have made a report upon these projects to the Lake Carriers' Association, whose president is Mr. Wm. Livingstone, of Detroit. The report does not favor the idea of the greater depths suggested. The recommendation of Col. Lydecker, division engineer, and Mr. Davis, district engineer, is that the twenty-two foot and twenty-five foot channel plan be deferred.

> "Well-informed vessel owners have stated that the limit of size of vessels which can be operated to advantage has been closely approached, and our position is this:—Finish the twenty-foot channel now under construction, and then wait awhile until we see what the result may be. It has also been stated that terminal facilities at lake ports are proving inadequate to care for the great cargoes which are now being dumped on the docks from a single vessel. This presents an economical problem which should be watched before going further with lake channels."

Mr. Davis' findings, forwarded last year to Washington, submitted estimates of cost of the whole route in addition to the many millions already spent, which are $7,738,000 additional for a twenty-two foot, and $25,938,000 for a twenty-five foot channel. Here are the figures:

	22 feet.	25 feet.
St. Mary's River	$2,465,000	$11,606,237
Lake Huron to Detroit River.	1,080,720	2,334,180
Detroit River (plan A, east route)	4,115,430	11,571,450
Gray's Reef passage	77,220	426,500
	$7,738,970	$25,938,367

To these sums, or rather to either of them must be added the cost of deepening the harbors of Chicago, Duluth and Buffalo to correspond with the deepened channels. Nowhere along the busy route has more effort and money been spent than on the Lime-Kiln Crossing of Detroit River, mainly in British waters, near Amherstburg. More than thirty years have elapsed since the nine feet water over "Anderdon Rock" was first deepened to twelve feet. Since then to fifteen, and more with a width of 300 feet to accommodate steamers 500 feet in length. Boats of the present century approach 600 feet, and they could be loaded, it seems, to more than twenty feet draft. What the American engineers now say is; let the twenty-foot channel here leading to Lake Erie thro' British waters be now completed, and turned over to commerce for up-bound craft. But in view of the further probable increase of traffic they recommend a second channel, which is proposed to be west of the Canadian island of Bois Blanc, and wholly in United States waters. This to be made 300 feet wide as far as Bar Point, beyond the mouth of the river, and 800 feet wide thence to deep water in Lake Erie, the whole to be carried down to a depth of twenty-two feet at a cost of $6,670,950, and used for downward-bound craft. The work will probably occupy five years, for much of the proposed channel has a rock bottom. Still the engineers, who are evidently not carried away by the vehement insistence of some of the vessel men, say: that the deepening to either twenty-two or twenty-five feet of any existing channel "should be deferred until it be plainly shown that a safe and reliable twenty-foot channel is not equal to the necessities of lake commerce." They do not, therefore, go further than recommending that Congress approve and provide for only such modification of the present project of improvement as will secure this result.

It is a disappointing thing to many Canadians that so small a share in the improvement of these great waterways has been taken by Canada. Only one or two appropriations of one or two hundred thousand dollars apiece are recalled as being contributed by the Dominion while Uncle Sam has spent many millions. Perhaps the powers at Ottawa considered we had done our share for inland commerce in the Welland Canal and the St. Lawrence Canals, and the deepening of the great river to tide water, and the Sault Ste. Marie Canal. But it cannot be forgotten that this country has a great and increasing interest in Lake Superior and Lake Huron, that our lake commerce is growing, and that our lake marine is growing. And if our contributions to the deepening of these western rivers be small compared to those of our great neighbor, we should not allow the Americans to outdo us in public spirit, or in the disposition to do our share, according to our means, in so great an enterprise.

* * *

MARINE INSURANCE LOSSES.

The winter season to which we are now saying farewell, that is the winter of 1905-6, has been a destructive one to shipping almost all the world over. It was a mild winter on shore, maybe, so far as temperature went, but the winds and waves were furious enough. The president of the Board of Fire Underwriters of New York, Mr. Raven, said last week that it is impossible to give an accurate estimate of the losses through maritime disaster, but there is, no doubt, that the combined losses will likely reach $4,000,000, possibly more.

"Maritime insurance is a peculiar business," he said. "The Atlantic Mutual Insurance Company, of which I am president, carries a widespread list of risks. We insure cargoes all over the world, and we've had an unprecedentedly large number of losses this last winter, especially during the past two months. I think, however, the English companies have been hit harder than any others and perhaps the Germans next. There are only a few distinctively American companies, but they've all suffered severely." Other marine underwriters have placed the losses to insurance companies at $3,000,000 to $4,000,000.

It is largely guess-work, to tell what the marine insurance losses have been all over the world for these last five months; but a group of sailing masters, vessel owners, agents, and insurance men, discussing this point on the floor of the Maritime Exchange, a week ago in New York, ventured off-hand estimates of the loss on the North Atlantic alone, for December, January, February, and March, as anywhere from three to five millions of dollars—these figures covering both vessels and cargo insurance.

All over the world it has been exceptionally rigorous and severe at sea, particularly on the North Atlantic, which is the most dangerous sea on the globe in the winter months. North Atlantic risks are considered by all insurance companies especially hazardous. Disasters to shipping along the Atlantic coast of the United States for the four months ended with March, have been greater than for the like period in many years. The lumber-carrying sailing vessels have suffered more, perhaps, than any other kind of craft, and next to them the coal-carriers. Great quantities of lumber and other cargo have been jettisoned, or else swept off the decks of vessels and steamers along the eastern and southern coasts of the United States. And in the experience of an observant mariner, the whole coast from the Gulf of St. Lawrence to New York is lined with floating lumber, spars, rigging and wreckage. Says the mariner, "If the flotsam and jetsam from Marblehead to Montauk alone could be gathered up and sold for junk it would make a man rich. * * * The average landsman has no idea what this winter has been at sea. It is not only the hardships which officers and crews have suffered, but look at the losses of cargo and the damage to hulls and rigging." Thus, then, the prospect to the marine underwriters of profit from the risks carried during the winter of 1905-06, is extremely problematical.

EXPORT STATISTICS.

Several communications have been the result of our reference a fortnight ago to export statistics in the Ottawa Blue Books. One of them from Brantford, signed "Canada First," we print to-day. The others agree that some record should be had of the export values of merchandise going from Ontario or other interior cities to other countries. Since there appears no hope that the Department of Customs will do any thing in the direction suggested last month in the House of Commons by Mr. Cockshutt, M.P., we make the suggestion that the Board of Trade of every inland manufacturing town and city shall exert itself to compile such statistics for its own particular municipality. If they cannot get the facts and figures from the collector of customs at home, (as we could not for this city, on application to the Toronto Custom House), they can apply to headquarters at Ottawa, where there are plenty of clerks capable of such compilation, who are not over-worked as we know some of their superiors are. As to the suggestion of "Canada First" that no attention was paid by the Minister to Mr. Cockshutt's request because he and his supporters were politically opposed to the Government, we do not give it the slightest credit. Mr. Paterson is a business man of good repute, as well as member of a party; and it is not like him, in answering a plain, common-sense proposal to employ political sophistry or departmental disdain. There must be some other reason. Meanwhile, let the Brantford Board of Trade and other boards of trade in Ontario proceed to compile from authentic sources the exports of their various districts. They are needed.

* * *

MARCH FIRE WASTE.

The good showing of February in the matter of fire waste was not continued last month, the losses from fire in the United States and Canada having been close upon four million dollars in excess of those in that month last year. These losses, we are told by "Journal of Commerce," of New York, which makes a careful compilation of the figures each month, were widely distributed, the large cities, especially New York, Philadelphia, and Chicago coming in for a large share. The largest fire of the month was the burning of the S.S. "Plymouth," at Newport, R.I., the bulk of the insurance on this loss, however, being placed with British marine companies. The following figures summarize the losses of the past twelve months:

	1904.	1905.	1906.
January	$21.790,200	$16,378,100	$17.723,800
February	90,051,000	25,591,000	18,249.350
March	11,212,150	14.751,400	18,727.750
Total 3 months.	$123,053.350	$56,720,500	$54,700,900
April	$23,623.000	$11,901,350	....
May	15,221.400	12,736,250	....
June	10,646.700	11,789.800	....
July	11,923,200	13.173.250	....
August	9.715,200	11,435,600	....
September	14.387,650	13.715,250	....
October	12,866,200	12,267,000	....
November	11,515,000	16,178,200	....
December	19,422,350	15.276,600	....
Total 12 mos. ..	$252.364,050	$175,157.800	....

STRIKES AGAIN.

The air is again filled with strikes and rumors of strikes. One, in our own country, took place in Winnipeg, where street railway employees quitted work to enforce recognition of their union, and the payment of higher wages. From its inception, the strike was attended with disorder and scenes of bloodshed, and many of the company's cars have been demolished or injured, though the employees state that this sort of work has not been encouraged by themselves. Both sides in the controversy seemed to be equally determined. Happily a settlement was reached on Monday, the company conceding a cent an hour additional pay to the men, but refusing recognition of the union.

The other case is in both the anthracite and bituminous coal regions of the United States, where some 400,000 men have refused to work, primarily because they do not see fit to admit that anything other than the "open shop" principle is an infringement of some of the most important clauses of the American constitution. As yet it does not appear by any means impossible that the trouble will be settled, but there is, of course, always a danger, when it reaches such a culmination as it has already, that some spark may give rise to a conflagration almost impossible to quench. Stocks of coal in the anthracite region are said to be very large, so that ordinarily there should not be any serious development facing the ordinary householder, though already some dealers, we understand, both in Canada and the United States, have taken upon themselves for some reason to raise their prices. In the soft coal realm, conditions are different. Stocks are apt to deteriorate when exposed to the weather, and they have not been accumulated to any great extent therefore. A protracted strike would consequently bring about great hardship for manufacturers. However, many of the mines have already resumed, and there does not seem to be such a determined feeling among the men as in the case of the anthracite workers.

* * *

—Probably we need to take to heart the hints made by Mr. E. N. Lewis in Parliament recently, respecting the status of the Canadian lake marine. It is true that in latter years many fine steamships, the product of Canadian yards, have been built for service on the Great Lakes. But these do not represent the whole story. Side by side with them in the words of Mr. Lewis, "are many old crafts worn out in service abroad, and brought here to hazard the lives of our seamen in." Some of these are merely old hulks fit for nothing but to be broken up for firewood; these are painted over, re-named, and made to look new when in reality they are all rotten beneath the paint. The wonder is that even so many survive the perils of the inland deep; and as it is, many lives are lost every year through their agency. It is true that we have inspection laws which compare favorably in strictness with those of some other countries. But even of more importance than the existence of good laws on the statute books is that they shall be rigidly enforced, and this is certainly not always the case with those affecting navigation. The speaker pointed out that Canada's merchant marine, instead of increasing, was decreasing. In building a ship 90 per cent. of the cost was spent on labor. Canada was in a better position than any other country in the world to increase its shipping. In Canada we protected everything but our shipping, but the United States protected its ships on the lakes.

—A lengthy article on the Canadian Tariff, in the "Dry Goods Economist," of New York, appears to lean to the opinion that Canada is in no mood for reciprocity with the United States. This article is based on a paper by Mr. Edward Porritt, in the "North American Review" for April. The article concludes thus: "Altogether, if Mr. Porritt's observations are accurate, and there seems no reason to question them, the outlook for closer trade relations between this country and Canada is more unfavorable than at any previous period. The conditions ought to prove an object-lesson to those who claim that our tariff policy should be formulated without regard to the desires or opinions of any other nation. They are of special interest at the present time." It is beyond question that the Canadian people have "soured on reciprocity," to use a current phrase, and Mr. Porritt, who has been all over Canada with the Tariff Commission, and has had excellent facilities for learning the opinions of the people, is quite right in describing it as a dead issue.

* * *

PRICES OF RUBBER.

Rubber manufacturers have now announced their discounts, definite information as to which had been awaited by jobbers and retailers with considerable interest. From the standpoint of the latter there is some improvement, though they still complain of inadequate profit in view of the necessity they are often under of holding over stocks of rubber shoes, etc., on account of weather conditions. However the tendency is, as it has been in recent years, to even up prices, so that there is now greater uniformity, and this in itself is a satisfactory feature.

> On ordinary lines of rubber shoes and rubber boots the regular trade discount is to be 20 per cent., with 5 per cent. extra on definite orders placed before June 1st. Additional cash discounts will be allowed as follows:—March deliveries will be payable on April 10th less 2 per cent., or on April 30th less 1 per cent.; April deliveries May 10th less 2 per cent., or May 30th less 1 per cent.; May deliveries, June 10th less 2 per cent., or June 30th less 1 per cent.; June deliveries, July 10th less 2 per cent., or July 30th less 1 per cent. Preference in delivery will be given orders received by May 1st. For fall dating, orders for delivery from July to October are payable on November 10th less 2 per cent., or on November 30th less 1 per cent.; November deliveries, payable December 10th less 2 per cent., December 30th less 1 per cent.; December deliveries, January 10th less 2 per cent., or January 30th less 1 per cent. For spring dating, deliveries in February and March will be payable April 10th less 2 per cent., or April 30th less 1 per cent., or net 60 days from the 1st day of the month following shipment. In the case of tennis and lacrosse rubber shoes the trade discount will be 20 per cent., with cash discount on March and April deliveries, payable May 10th less 2 per cent. or May 30th less 1 per cent.; May 1st to September 14th inclusive payable on the 10th of the following month at 2 per cent. discount or on the 30th at 1 per cent. discount, or net 60 days from first of the month following shipment. There are other discounts, bonuses and rebates under certain circumstances.

The month of March witnessed a material improvement in rubber conditions throughout a large section of the country, particularly in Ontario. There was more real wintry weather than in any other portion of the season and sorting orders were much more frequent. Retailers in many cases feared they would be obliged to carry over the bulk of their stocks. As a result of the brisker demand payments have been better than they at first promised.

The semi-famine in crude rubber continues unabated. The fact that perhaps rather less was required for footwear manufacturing purposes makes but little real difference, as the other commercial uses for this article are increasing every year, both in number and volume. The production of cultivated rubber is gradually increasing, but the sources of supply of the natural-grown are becoming scantier and more inaccessible every year, and the probable result for some time to come would appear to be certain higher prices or at any rate a full continuance of those already prevailing.

CANADIAN BANKS.

A correspondent in Manitoba asks us for the dates of founding of the various Canadian banks, and an Ontario man asks how much capital each bank has. We answer both enquiries in the following table:

Name of Bank.	Founding. Date of	1906. Paid Capital
Bank of Montreal, established........	1817	$14,400,000
Quebec Bank, established.............	1818	2,500,000
Bank of New Brunswick, incorporated	1820	509,000
Bank of Nova Scotia, incorporated...	1832	2,503,000
Bank of British North America......	1836	4,866,000
Bank of Toronto	1855	3,491,000
Ontario Bank	1857	1,500,000
Canadian Bank of Commerce.........	1867	10,000,000
Imperial Bank of Canada...........	1875	3,890,000
Standard Bank of Canada...........	1875	1,000,000
Bank of Hamilton..................	1872	2,456,000
Bank of Ottawa	1874	2,951,000
Royal Bank, incorporated 1869 as the Merchants Bank of Halifax	1869	3,000,000
Union Bank of Canada..............	1865	3,000,000
Molsons Bank	1855	3,000,000
Merchants Bank of Canada..........	1869	6,000,000
La Banque Nationale	1860	1,500,000
Eastern Townships Bank	1858	2,738,000
Union Bank of Halifax..............	1856	1,336,000
Western Bank of Canada	1882	550,000
La Banque Provinciale	1870-1900	823,000
St. Stephens Bank	1836	200,000
People's Bank of New Brunswick....	1870	180,000
Dominion Bank	1871	3,000,000
Traders Bank of Canada............	1885	3,000,000
Merchants Bank of P.E.I.	1870	350,400
Banque de St Jean	1872	300,911
Banque d'Hochelaga	1874	2,000,000
Banque de St. Hyacinthe	1874	329,505
Metropolitan Bank	1902	1,000,000
Sovereign Bank	1902	1,622,000
Crown Bank of Canada	1904	738,842
Home Bank of Canada..............	1905	610,350
Northern Bank	1905	648,818
Total	....	$85,958,202

* * *

THE JOSEPH PHILLIPS CASE.

The revelations before the Police Court of the workings of this man Phillips by means of the money of the York County Loan shareholders are astounding the community day by day. Here are some expressions from the magistrate about the matter. Phillips' counsel had complained that "in all his experience he never saw a case so conducted:"

"In all your experience, and, I may say, in all mine, I have never seen a case so complicated, so mixed-up, and one with so many different methods, and every one for the purpose of defrauding."

But the magistrate was not through.

"Never has a case so wide-reaching, never methods so secret for perpetrating fraud ever come before me, and in the interests of justice it is absolutely necessary for me to see that there is a full and free investigation. Mr Curry can't go on rapidly under the circumstances.

"The opinion is growing in my mind every hour that there was a deliberate scheme laid out and planned by which the Liszt Piano Company was used to wreck and squeeze the York Loan in order to take all out of it for the benefit of a few people. It is evident that the York Loan was going to be wrecked for the benefit of the Life Company and others owned by Phillips and a few employees."

"What will the jury try, then?" asked Mr. Jones.

"They will try if he manœuvred and managed by fraud and deceit to get money from the York Loan into other companies. It was not done by one distinct act."

"You must know," replied the magistrate, "that the witnesses are hostile, that they are trying every dodge, and that they possess a memory that has a marvellous capacity for forgetting."

Farther on Mr. Curry declared: "If I had at the first the evidence I have now I would have made the charge that Phillips did conspire with Georgina Hudson, Lillian Hudson, E. J. Burt and others to defraud."

A good step was taken when, at the instance of the liquidators, the National Trust Company, an interim injunction was granted restraining certain shareholders of the Toronto Life Insurance Company from disposing of their stock in the company. Mr. Justice Mabee changed the date and made the injunction returnable on Wednesday, the 18th.

What a flavor this concern has of The Anglo Bengalee Disinterested Loan and Life Insurance Company, immortalized in Martin Chuzzlewit, which, it will be remembered, "started into existence one morning, not an infant institution but a grown-up company, running alone at a great pace and doing business right and left. Tigg Montague, Esquire, of Pall Mall and Bengal, chairman of the board of directors; David Crimple, Esquire (formerly Crimp), secretary and resident director; Bullamy (of the red waistcoast) porter; John Jobling, M.R.Q.S., etc., medical director—offices new—chairman's dog-cart new—brass door plate new—ledgers new—iron safe new—monogram letter paper new—policies very new. Constantly increasing bonuses; regularly paid commissions; premiums, bonds, annuities, insurances with loans, insurance without loans, loans with insurances—all the latest and smartest." Both intended to "do" some folks and to enrich other folks. Both carried on with a reckless gaiety and a free-handed partiality. But the Nadgett of 1843 is the Curry of to-day, and both names spell Nemesis to the Montague Tiggs or Tigg Montagues of that day or this.

* * *

STATISTICS OF OUR EXPORTS.

Editor "Monetary Times."

Sir,—You had in your paper last week an article about export statistics, and, I think, the manufacturers and export merchants of our cities ought to see about getting some kind of acknowledgement of what they are doing for the country, and for the reputation of the country, too. There ought to be, somewhere, a record of what goods are sent to other countries from our cities, and to my mind it seems the natural place to have it kept is where other statistics of Canada are kept, that is to say, at Ottawa.

To have it stated as it is, in a Canadian Blue Book, that the exports of Hamilton in twelve months are $586, *five hundred and eighty-six dollars*, and of Toronto *three thousand, one hundred and fifty dollars*, $3,150, and of Brantford *nil*, is a sort of injustice that these places should not stand, and also which, I believe, Brantford is not going to stand. It is no good answer to say, as the Minister of Customs said in the House of Parliament, that "these goods exported are all products of the Dominion of Canada," therefore, it does not matter where they go from. I would like to ask the Minister why he does not take the position that it does not matter where goods are entered inward, and it need not be stated in the Blue Book because they are all coming into Canada.

I notice, Mr. Editor, that all of those members of Parliament who supported Mr. Cockshutt in his comments on the unsatisfactory state of our export statistics were on the opposite side of the House from the Government. Is this the reason that the Minister did not think it worth while to grant the request that a clerk or two at the Trade and Commerce Department should be put on the job of listing the manufactures of our cities, so that any Canadian or foreigner could discover what they were? It strikes me as curious anyhow that no word was heard from any Government supporter in favor of so business-like a proposal.

CANADA FIRST.

Brantford, 3rd April, 1906.

* * *

OUR HALIFAX LETTER.

The advantage of creating feeders to the trade of the city is being recognized more strongly since the South Shore Railway of Nova Scotia has been opened up, and this principle is now being pushed in a new direction; the starting of direct lines of steamers to different points along the provincial coast. Small steamers of considerable power, with accommodation for both freight and passengers are specially adapted to the conditions of this Province, with its innumerable harbors and fishing and mining settlements. There are already a good number of these small lines in operation along the east and west coast, and they have proved very successful. New lines are now contemplated to Louisburg, Glace Bay and Sydney, and to Canso, Port Hood, Cheticamp, and the Magdalen Islands. All these lines are of great advantage to the wholesale trade of this city, and increase its advantage as a distributing centre.

It is now believed that the lumber cut in this Province will not be so small as was formerly feared. The absence of snow tended to curtail lumbering operations during the past winter and in some sections the men were not able to get into the woods at all; but in others it now appears that operations were conducted on a fairly large scale, and the total cut will probably be about two-thirds of an average one. Inasmuch as high prices prevail and are likely to continue, the outlook is greatly more hopeful than was expected. Of course there is a considerable quantity of logs cut, which will have to remain in the woods in many cases until next season's snow.

The Government report on railways and other public works in the Province for 1905 has appeared. The total railway mileage under control of the Government is 490 miles. The total mileage in the Province is 1,174 miles. During the year contracts were let for 48 iron bridges and payments made on 115, finished or under construction. A large number of wooden and smaller bridges were constructed. The total amount expended on roads and bridges during the year was $252,073.

Halifax is now "worked up" on the question of taxation. The laws and privileges committee of the city council has prepared a scheme which, if it survives the strenuous opposition it has encountered from the interests on which the incidence of taxation will bear will add considerably to the revenue of the city. It is proposed to tax telegraph companies $400 per year; express companies, not having their head office in Nova Scotia, $200; express companies, having their head office in the Province, $100; stock-brokers, $200 each; mercantile agencies, $100; real estate agencies, $25; the Nova Scotia Telephone Co., $600; life insurance companies, $200 each; fire insurance companies, $300 each; building or loan and trust companies, $200 each. The bank tax will provide the largest amount of revenue and it has likewise aroused the greatest degree of criticism—particularly from the banks. The recent rage for bank amalgamation has affected the revenue the city derives from those institutions. It is now proposed to charge each bank a flat tax of $1,000, and in addition, a tax on its capital and its real estate the total for the six banks—Union, Nova Scotia, Commerce, Montreal, Royal, and British North America—amounting to $21,372. The amount is intended to grow as the business grows. The Union Bank of Halifax, which is the only purely Provincial institution now remaining of the many which have been started here, opposes the new proposal most strenuously. They do by far the largest city business and the tax will bear heaviest on them. Popular sympathy is with this bank in its protests and it is very doubtful if the new measure will become law unless amended. With regard to the tax on telegraph and express companies, they complain that they are making nothing in the city as it is, and the new tax will possibly oblige them to withdraw—a statement which is taken with several grains of salt.

There is unmistakable chagrin and discontent expressed in this Province to see large numbers of immigrants arriving at our wharves almost daily, and all passing through to settle elsewhere. There are numbers of vacant farms in Nova Scotia perfectly fertile, but from which the younger generation have departed to seek more alluring surroundings. Some time ago the proposal was made that a list of suitable properties and other information to attract settlers should be prepared, but nothing ever came of it—more is the pity. A bill is now before the House of Assembly for the election of mayor and aldermen for the different wards simultaneously. The present system is for two aldermen to retire yearly and in this way it is impossible to obtain a plebiscite of the whole city on any particular measure. The new proposal is generally favored and will probably become law.

The report of the Department of Mines for the Province has been issued and it is rather a discouraging one, particularly in regard to gold mining. There was a decrease in the output of coal of nearly 200,000 tons, the figures for the past year being 5,050,420 tons. The output of gold was 13,550 ounces as against 14,279 for 1904—itself a decrease; iron ore, 73,600 tons as compared with 258,338 tons. There were 274,002 net tons of iron ore imported during the year. The coal royalty amounted to $549,639.98.

It is reported that the Canada Locomotive Construction Company will establish a plant employing about 1,500 men in the north end of the city. Properties have been purchased and others bonded in that vicinity, and if present plans are carried out construction will be begun in June.

The troubles of Kings College continue. Attempts have repeatedly been made to revive this institution which is languishing for lack of funds. Now the entire faculty has been asked to resign, presumably to get rid of some undesirable members. Kings exhibited some signs of life during the past year or two among other ways in establishing a School of Mines in Cape Breton; but internal differences with regard to its policy and lack of both funds and students have kept it from attaining much usefulness. Acadia College, which has made remarkable headway under President Trotter, is to lose that admirable college president, who retires, owing to ill-health, although the governors have offered him a year's vacation and salary. He recently succeeded in increasing Acadia's endowment by three hundred thousand dollars and leaves the college in a very prosperous condition.

Halifax, N.S., 9th April, 1906.

* * *

IMPERIAL GUARANTEE AND ACCIDENT INSURANCE COMPANY OF CANADA.

One might think, from the length and style of its name, that this is an Old Country company, but it is not. The company has been formed in Ontario, and this is its first report of transactions, the same being for the five months ended with December last. It is significant of the growth of Canada when, with all the accident and fidelity guarantee companies already doing business within her borders, this newest one should be able to show, for five months' existence, 1,292 policies written for an aggregate of almost three millions of dollars. These have been taken all over the Dominion, we are told. The company has $100,000 deposited with the Government at Ottawa. It has energetic representation, both at head office and outside, and among its directors are R. Bickerdike, M.P., of Montreal; Hon. F. T. Frost, Senator Cox and Mr. J. J. Kenny.

BANKING AND FINANCIAL.

We are informed that Mr. E. R. Dewart, formerly accountant of the Bank of Commerce at Dunnville, has been appointed manager of the branch of the Home Bank at Walkerville.

Force of Habit.—Charon laughed. "Bet that tall chap was a Senator or Congressman on earth," he whispered. "Why so?" asked the society reporter of the "Asbestos Age." "Because as soon as he stepped on the ferry he began to fumble about for a pass."—Chicago News.

At a meeting of the board of the Montreal City and District Savings Bank on 26th March the Hon. J. Alderic Ouimet was elected vice-president, in the place of the late Mr. R. Bellemare, and the vacancy on the board of directors was filled by the election of Mr. Nolan de Lisle.

Under the heading "The March of Progress" the "Wall Street Journal" has the following:—"The London Bankers' Magazine" devotes one of its valuable pages to discussing the problem of whether banks should use the telephone. It sounds revolutionary, but since the London banks took to using blotting paper instead of sand anything might happen.

The Bank of Ottawa opened a branch at Rouleau, Sask., last week with W. H. Dickinson as manager. This makes the fourth branch of this bank in Saskatchewan, the others being at Regina, Prince Albert and Stoughton. The same bank purposes opening in a few days at Beachburg and Westmeath, in Eastern Ontario, and at Campbell's Bay, Que.

The manager at Arcola, Sask., of the Merchants Bank of Canada, Mr. C. R. Young, writes us on 6th April thus: "We have opened a sub-agency of the bank at Forget, Sask., with a service of twice a week, Tuesdays and Fridays." Forget is a growing place in Saskatchewan Province, about sixteen miles from Arcola, which is not very far from the Manitoba line.

Word comes from Montreal that the Credit Foncier Franco-Canadian is erecting a fine building at Edmonton for business purposes. Also that the Hochelaga Bank will open a branch in that building when completed. The general manager of the Hochelaga Bank, Mr. Prendergast, who has lately visited Edmonton, speaks warmly of the activity of the place. His bank will presently have three branches west of the Great Lakes, namely at Winnipeg, St. Boniface, and Edmonton.

Disbursements for dividends in the United States this month are very heavy. The principal industrial, railroad and street railway companies will distribute $64,772,425 in dividends, compared with $38,117,873 in March, showing the large increase of $26,654,552. Industrial companies head the list with $30,011,065, the heaviest monthly disbursement on record and $5,149,125 more than was paid last April. For the first four months of the current year the total is $100,536,657, a large increase over last year's figures. The railroads contribute $28,969,520 to the grand total for April.

One of the officials of the National Bank of Commerce, in St. Louis, attended the Iowa State Bankers' convention at Des Moines, last summer. While conversing with a group of bankers he was asked, "How did your book-keeper happen to make such a bad mistake in your last published statement? He puts your circulation at the impossible figure of $6,999,997.50." The St. Louis official laughed. Said he: "Those figures are correct." "But there are no two-and-one-half dollar bank notes issued, as your statement would seem to indicate." "I know that. The matter is, however, easily explained. The Government will redeem a bill torn in two for one-half its face value. Some person lost one of our $5 bills, presented half of it for redemption, for which he received $2.50, and the balance of the bill is still to be heard from.

* * *

—Wyatt & Co., of the Toronto Stock Exchange, have favored us with a copy of some copyrighted tables, showing the control and classification of leading United States and Canadian railroads; also giving information regarding wheat, corn, cotton and coal, the chief sections in which they are produced, the chief commodities hauled by various of the railroads, etc.

INSURANCE NOTES.

A life insurance policy is a will which requires no lawyer to make and which no lawyer can break.—Harvey.

The smoke house of the F. W. Fearman Company, pork-packers, Hamilton, Ont., was on the 31st ult. damaged to the extent of $10,000 or $12,000 by fire.

The Western Union Association is to meet on Wednesday next, 11th April, at Atlanta, Georgia. This is one of the gatherings of fire underwriters from which we may always expect some sensible action.

"Fire Insurance in Pennsylvania for Thirty-three Years," published by the "Insurance World," contains sixty-four pages of statistics relating to the companies operating in Pennsylvania. These statistics include premiums received, losses incurred and paid since 1873.

The Chatham Motor Car Company, Limited, Chatham, Ont., has been granted letters of incorporation by the Ontario Government. W. W. Logan and W. J. Taylor, of that place, are among the members. It purposes manufacturing and dealing in gasoline engines, automobiles and auto cars of all descriptions.

The defection of the London manager of the New York Mutual is the insurance sensation of the hour. No more caustic comment on the scandals and their adjustment has been offered than that made by the act of Mr. D. C. Haldeman. He enjoys public confidence and doubtless will find a large measure of support in his endeavors to make the British business of the company a "pot o' one," standing on its own bottom.

Sir Edward Brabrook, C.B., lately chief registrar of Friendly Societies, has been appointed a director of the Accident Insurance Company, Limited. Sir Edward Brabrook has been connected with the company for over thirty years as auditor. Mr. Courtenoy C. S. Fooks, of Gray's Inn, has been appointed auditor to succeed Sir Edward.

When men like Joseph Ashbrook, of the Provident Life and Trust; Rhodes, of the Mutual Benefit Life; Holcombe, of the Phœnix Mutual; English, of the Aetna; the representatives of the North-Western Mutual, and many others, all standing for what is safest and most conservative in life insurance, denounce the Armstrong bills as visionary, destructive, and impracticable, it is pretty certain that something is wrong with the proposed legislation.—Insurance Age, N.Y.

Last year there was a decrease in the value of buildings destroyed by fire in Winnipeg. The annual report of the fire department shows that there were 617 calls received. Of that number 240 were big fires, the rest being either small blazes or false alarms. The value of buildings and contents exposed to danger was $1.713.607, on which there was carried an insurance of $1,084,535, and the loss amounted to $312,548.34. The figures last year show a decrease of $66,658.32 from 1904.

The directors of the Liverpool and London and Globe Insurance Company announce with great regret that Mr. John Matthew Dove, who has been general manager of the company for over thirty years, will retire from that position on December 31st next, but they are pleased to state that he will then accept a seat on the board. The directors also announce that it is their intention to appoint Mr. A. G. Dent (the present sub-manager of the company) to succeed Mr. Dove upon his retirement.—Insurance Record, London.

One the 8th prox. Berlin, Ont., ratepayers will vote on a by-law to increase the town's debenture debt by $71,000. The Light Commission is compelled to increase its power capacity owing to the large demand, and machinery will be installed to cost somewhere near $55,000. The engines and generator that will be put in will be of service to the town when Niagara Falls power is brought there for distribution. When it does come Berlin will not be compelled to spend thousands of dollars for generators, which will have to be done by other towns and cities that are waiting for Niagara power. The other by-laws that will be submitted are for the purpose of raising $13,000 to pay the balance of the cost of the sewer disposal plant, and $3 000 for improvements and additions to the fire department.

Amalgamation has been arranged, to take effect on 1st May next, of the Toronto insurance firm, Shaw & McNaught, with the firm of Messrs. Jos. B. Reed & Sons, of the same city, in the registered firm name of Jos. B. Reed & Sons, Shaw & McNaught, as general agents and brokers. The new concern will represent the Connecticut, the Mercantile, and the Waterloo Mutual Fire Insurance Companies, as well as the Liverpool and London and Globe Insurance Co., Employers' Liability Insurance Corporation, Limited, Dominion Plate Glass Insurance Co., at 51 Yonge Street.

According to the best information which "The Locomotive" has been able to obtain, there were 450 boiler explosions in the year 1905, which is an increase of about one-eight over the previous year. There were 391 in 1904, 383 in 1903, 391 in 1902, and 423 in 1901. In several instances during the year 1905 two or more boilers have exploded simultaneously. The number of persons killed last year was 383, against 220 in 1904, 293 in 1903, 304 in 1902, and 312 in 1901; and the number of persons injured last year was 585, against 394 in 1904, 522 in 1903, 529 in 1902, and 646 in 1901.

* * *

FOR GROCERS AND PROVISION DEALERS.

A. R. Speers Company, Limited, Sault Ste. Marie, Ont., have received an Ontario charter authorizing them to carry on the business of wholesale and retail butchers and dealers in cattle, pigs, poultry, and other live stock, and to breed the same, and for such purposes to acquire farms and cattle ranches, etc.

The Montreal firm of N. Quintal & Fils, dealers in groceries, wines, liquors and provisions, is to be converted into a limited liability company under the title of N. Quintal & Fils, possessing a total capital stock of $250,000. Besides carrying on business as before-mentioned, it will undertake exportation and importation, manufacture, and act as commission merchants and commercial agents generally.

An old price-list of the Canada Sugar Refinery, dated 6th April, 1866, came to light the other day. It is of interest to observe the great difference in prices forty years ago and now. Dry crushed sugar was then quoted at 12½ cents per pound, ordinary crushed at 12 cents, and No. 2 yellow 9½ cents. We have not these precise grades now, but standard granulated sugar can be had to-day for 4¼ cents, and yellow sugar for 3¾ cents per pound. And yet we are told by some folks that the country is oppressed by the high prices charged by the refiners!

* * *

DRY GOODS NOTES.

Messrs. Clark & Napier are starting a carpet factory in Paisley, Ont.

The second series of wool auction sales in London closed on the 24th. The offerings numbered 7,904 bales. Prices were maintained. When the series opened the attendance was unusually large and competition was animated. The tone was strong through the series, particularly at the close, when prices were at the highest point. Merinos at the outset were 5 per cent. above the February average. Later they hardened 7½ to 10 per cent., except the best grades. Crossbreds started 7½ per cent. higher and advanced to 10 per cent., influenced by the keen American demand for better sorts, while mediums and inferior advanced 10 to 15 per cent. above the first sales. During the series 131,000 bales were available, of which 68,000 were sold to the home trade, 45,000 to the continent, 11,000 to America and 7,000 were held over for the next series.

Vault doors in Bank of Montreal and Royal Trust Company, Montreal Three times larger and heavier than any other in Canada. Doors and Vestibules weigh **60 tons**. Total weight of lining and doors **260 tons**. Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

J. & J. TAYLOR, Toronto Safe Works, Toronto.

Established 1855.

HENRY CLEWS' ADVICE.

The recent experience in the money situation and its outlook for the immediate future justify me, says Henry Clews, of New York, in saying that people seeking investments should now measure the value of bonds and stocks by the rate of interest or dividends which they pay, and that first-class bonds should not be bought to return less than 4 per cent. interest and a similar grade of stocks 4½ per cent. dividends. Buyers of [American] securities, if governed by this rule, are not likely to lose money in their operations, otherwise they run the risk of doing so. One of the reasons for the higher rate of interest prevailing is the active use of money throughout the country, a large part of which is tied up indefinitely in enterprises. The increase of our circulating medium has not apparently kept pace with the increase in the country's development. So long, therefore, as this condition of affairs continues money is liable to command a higher rate of interest.

* * *

Sherbrooke has a new four-storey hotel, corner Wellington Street and Aberdeen Avenue, at least it is almost ready for opening. It has modern arrangements, and the interior is well fitted. Pity it could not get an original name from the picturesque surroundings of Sherbrooke, instead of going to the ancient capital to borrow the title, "Chateau Frontenac."

NORTH OF ENGLAND LETTER.

A commission of distinguished Chinamen is touring Britain to pick up our secrets of constitutional Government. The National Civic Federation of America is despatching its representatives to enquire into our systems of municipal trading. They are to judge how fit our methods are to stand transplantation into the United States, and Canadians will probably be interested in their report. Indeed, we also will be glad to know how the benefits of municipal trading can be preserved from alliance with its undoubted drawbacks. Progressive as most of our municipalities claim to be, not one of them dares to lend money to private firms which is done on occasion in Germany, as it is in Canada.

Our municipal authorities do help out great public works sometimes, when private capital is beam-ended. Witness the action of the Manchester corporation in backing with 25 million dollars the titanic ship canal. To-day the corporation is being approached tentatively with the proposal that it should build a new Royal Exchange. The largest commercial exchange in Europe is still too small for its 7,350 subscribers. Extension of the existing edifice is not easy and before shifting the hub of Northern England's wheel the directors wish to know what the city fathers think and what they propose to do.

More Governments than the Dominion's are jealous of the good name of the national produce. A Manchester house of butter-shippers warranted as pure, butter that is said by the analyst to contain 10 per cent. of cocoa-nut oil. The butter was bought from a Finland farm and is believed to be unadulterated, and with an eye to Finland's repute the Government is sending over a Finnish scientist to take part in the defence. There is a little doubt whether analytical methods are entirely satisfactory in determining the composition of butter. At any rate litigation is to be avoided by the judicious. One law case over the bona fides of butter cost the parties $5,000 in legal expenses recently.

Government supervision of produce for export is generally approved. But Japan, from whence we procure great quantities of plain silks, is stipulating that her exporters of silk pieces shall preserve certain standards of purity. People in the trade object that the foreign public want adulterated silks as well as genuine ones. They insist that the Governmental interference will do less good than harm.

One might say that England has no statistics showing the condition of internal industry and commerce. To find how we stand we must judge from indirect indices. There are the export and import figures, the bank clearings, the railway traffics, the savings-bank deposits, the income-tax returns and the progress of rateable values. We have the meagre particulars of employments furnished by the decennial census and the very limited information afforded by certain trade-unions give a hint of the extent of unemployment. But nobody can say that such an industry employs so many people, so much capital, and turns out so much value in goods. You in Canada are better informed than we are in all that arises from a national stock-taking. Germany, France, the United States and, I think, Switzerland all take a census of industry as well as of population. So will Great Britain and Ireland when Mr. Lloyd-George, the Welsh solicitor at the head of our Board of Trade, gets his way. A bill of his is now in preparation, and we shall expect to get particulars of domestic trade that are full without being erroneous. Our statisticians very well know, however, that complexity and accuracy do not always march with equal step.

"Canadian cattle are always sound in liver and lung. . . . No cattle could be more unsound than the Irish. . . . The idea of Canadian cattle importing disease into the country is absurd." These are the public words of a butcher who may be believed to know the conditions of the organs of cattle. They were used at a meeting at York of the Yorkshire Agricultural Union, where once more was debated the interminable embargo question. Without adding a word of prophecy, one can say that the farmers are manifestly afraid that the Government is going to admit Canadian live beasts.

Messrs. Thompson & Co., bacon importers of Manchester, publish their opinion, that not before the end of the year can large enough supplies be looked for to moderate the high prices prevailing. It is said persistently that nobody, be he importer, inland wholesaler, or retailer, is making much money nowadays out of transactions in provisions. The wholesaler is being superseded relentlessly and the importer finds a living profit hard to get in these days of large stores and co-operative marketing. Rather piercing cries from middlemen are heard in various directions.

A deficiency of more than $490,000, and that in a livery company's affairs is happily a rare occurrence. The firm was $150,000 to the bad twelve months ago, when William White, Jr., late managing director of White's Carriage Co., Liverpool, began to tamper with the share certificates. Over $110,000 worth of shares were forged, a cheque for over $11,000 was falsely uttered, and a sum of $25,000 was obtained by false pretences. If that record of the actions of a leading commercial man provokes no shudder my name is not.

NORTH COUNTRY.

Manchester, March 30.

* * *

THE LATE JOHN BERTRAM OF DUNDAS.

The town of Dundas lost perhaps its best known citizen in the industrial world in the death last week of Mr. John Bertram, head of the Canada Tool Works, and there was widespread sorrow in consequence. Deceased was one of the best known manufacturers in Canada. He was a native of Scotland, having been born at Eddlestone, Peeblesshire, in 1829. Through his mother he was descended from the Aimers, leading millwrights and engineers in the south of Scotland some two hundred years ago; and with one of the name, an uncle, he learned his trade at Galashiels. He was, therefore, justly termed "a born mechanic." He came to Canada with his wife in 1852, where he worked in the Gartshore foundry, and in 1865 formed a partnership with Robert McKechnie for the manufacture of iron and wood-working machinery, under the style of McKechnie & Bertram. This firm did good work, made good tools, and it being a growing time in that trade their business grew very greatly. Dissolving in 1886 after years of success and good credit, Mr. Bertram, with two sons, founded the widely-known Canada Tool Works, and lived to see it one of the most extensive and prosperous of the many large establishments of the Dominion. He was a man of simple life, of good principles and habits; of genial disposition, too, with a strong relish for Scottish literature and story. His long life—for he was in his 77th year when he died—was characterized by conscientious work, steady enterprise, and the adoption of modern methods. Through system he and his sons built up a business employing between three and four hundred hands, and in 1901 became the John Bertram & Sons, Limited. The deceased gentleman was elected president of the Canadian Manufacturers' Association in 1893, and he was for years a member of its executive council.

* * *

WINDSOR (NOVA SCOTIA) BOARD OF TRADE.

A meeting of the Windsor Board of Trade was held recently at which was discussed the improvement of shipping facilities at that port. The president, Mr. W. H. Roach, outlined briefly the scheme of the plan prepared by Mr. J. A. MacCallum which he (the president) thought would meet the needs of shippers. The plan showed the extra wharfage that would be required, and the changing of the tracks so as to run a track parallel with the water front. Another important matter to be attended to is the dredging of the mud that has accumulated to a great depth in front of the wharves. Dr. Black, M.P for Hants, has already made application to the Government for a dredge, with a strong probability of being able to procure one.

At the close of the meeting the following gentlemen were chosen as a committee to place the matter before the Government:—F. A. Shand, J. A. Russell, G. M. Parsons, Capt. D. Munro, W. S. McPherson, and A. L. Price.

WESTERN RAILROAD DEVELOPMENT.

Some more information, if it is to be believed, has come to hand respecting the plans of James J. Hill for railroad building in Canada. A despatch of recent date from St. Paul, Minn., states that he had confirmed the report from Montreal that the Great Northern will build a third transcontinental road through Canada, from the Atlantic to the Pacific, and that all possible speed would be observed in pushing it to completion. It must be confessed, however, that this seems highly improbable. The plans of Mr. Hill are said to contemplate the construction now of a line from Vancouver, B.C., to Winnipeg; but it is in no broad sense a Canadian line. As we are informed, it begins at or about Vancouver, and soon dips into the United States, running through Washington and Idaho and part of Montana, then up into Alberta, and across Saskatchewan and western Manitoba, and downward to St. Paul, Minnesota. Another account says, however, that construction is under way from Vancouver, B.C., over the coast range easterly to Princeton. The route follows the south bank of the Fraser River, and inclining northerly, it strikes just north of the Tulameen River. The line will cross near where the Pasayton and Similkameen Rivers come together in a fork at Princeton. The line proceeds along the Similkameen Valley on through the copper district. After crossing the Okanagan River, the route swerves in a northerly direction to Midway, B.C.

From Midway the Great Northern already has a line built to Nelson—Grand Forks and Marcus being among the important points along it,—while coming down to Spokane connection is made with a line that runs from Bonners Ferry north to Kuskonook. One proposition is that a connecting link be put in between Nelson and Fernie and another between Kuskonook and Fernie. While the Great Northern, however, is thus actively engaged in invading Canadian territory, the C. P. R. is carrying on analogous operations through various ramifications of its Soo line.

* * *

—Mr. Thomas Tait, the Canadian manager of the State railroads of Victoria, Australia, continues his tale of success:—For the seven months ending January 31, 1906, these lines made substantial gains, both in net and gross earnings. Indeed for the last month of the year, January, both the gross and the net revenues were the highest ever earned in the history of this railway system. For the first seven months of the fiscal years, as mentioned above, the gross revenue amounted to £2,211,000, as compared with £2,075,000 for the corresponding period in 1905. This makes a gross increase of £136,000, and the increase in net revenue amounts to £106,000. The system has now a total of 3,394 miles.

RIVERDALE DISTRICT.

Since our reference to the formation of a business men's association for the portion of Toronto east of the River Don we have received a letter, dated April 7th, from the secretary of that body. He states that the committee has the by-laws for a Board of Trade drafted, and the nominations are ready. A general meeting is to be held on the 19th inst. to complete organization.

"The committee this week escorted the Mayor and Controllers through Ashbridge's Bay district to look over the ground and recommend a route for the proposed spur line, referred to in your report of our first meeting. Our committee had already recommended as the best route the 150-foot reservation for roadway along the north shore of Ashbridge's Bay, and we understand that the Engnieer has advised the Board of Control that this should be the route. If in the future wharves are built along this water-front (and this we are looking forward to), it is necessary that the railway, to be of much value to the industries in that district, should be in close proximity to the shipping. I am inclined to think that all the Controllers and Aldermen who have looked carefully into the matter are agreed as to the wisdom of this selection. And everything seems to point to the fact that the railway spur will be built in the near future. At our meeting yesterday Alderman Fleming handed us this memo. from the Engineer:

> 'The Board of Control have requested me to report to your committee upon the cost of constructing a railway track upon the marsh from a connection with the Grand Trunk Railway tracks at Cherry Street to Leslie Street. The approximate cost, including rails, ties, piles, trestle-work and the necessary filling will be $46.000.

"We are also given to understand that all this work could be completed in three months from the time it is commenced. Our committee is to go before the Board of Works at the next meeting to urge them to undertake the building of this spur line as soon as possible, and to carry it through without delay. With this railway an accomplished fact, think of the inducements which could be offered to manufacturers to locate in this district! Our provisional committee has also taken up other matters, such as local express delivery and collection. There is an express office at the G.T.R. depot, it is true, but no delivery as yet. We are besides asking the Grand Trunk Railway to change the name of their station from "Queen Street East" to "Riverdale." A petition will likely be prepared before long asking the Post-office Department to build a branch office here. Other minor matters—matters of purely local interest—are also being taken up. The building of a bridge connecting Wilton Avenue and Elliott Street is also in hand."

* * *

—We have referred before to the good scheme being inaugurated in various towns and cities of British Columbia to form Population Clubs. Now another idea of the same nature is being promulgated; or, in other words, a Million Club for the whole of the Pacific Province. The idea is for each citizen of the Province to send the facts about British Columbia to at least one person in other parts of the world, and invite correspondence with a local committee, that will tell the truth about the land and the opportunities for success offered by each part of the Province. Everybody will be invited to join and pay a dollar a year to defray the expense of literature, correspondence and advertising the country. Already leading citizens of Slocan City, Nakusp, Nelson, Midway, Rossland, Trail, Vancouver, Revelstoke, Greenwood, Grand Forks, etc., have signed for membership. The probability is that an effort will be made to have the facts about the Province go out to the world on every piece of mail that is sent by any local citizen, either on the envelope or on the stationery. Some hotel-men are going to have envelopes printed with facts about British Columbia on the back and facts about their section on the front. It may be said of the enterprising people of our Far West that they not only deserve success; they command it.

HIGHER GRADES OF UNITED STATES CONSULS

The time will apparently soon be gone by when the travelling American will, as has often been the case in the past, seek the advice or assistance of the British consul in a foreign port or city, rather than submit his case to the doubtful knowledge and experience of the American consul. There is now also good reason to hope that the American consul of comic opera and drama will within a measurable time be far less representative of actual conditions than is the case at present. In other words, as reported in our news columns this week, the bill for the reform of the consular service has become a law through the signature of President Roosevelt.

The main provisions of this law are stated in another column, and show that the law is a fairly comprehensive one. Much improvement in the character of our consuls is to be looked for from the reclassifying of the service and the changing of the consul's remuneration to the form of a straight and adequate salary, instead of having his income, as in the past, based largely upon fees. The provision for the systematic inspection and supervision of consuls and consulates should also be productive of good results.

. . . .

There is no question that the dignity of this country abroad will be enhanced and its reputation increased by the employment of a higher grade of men to represent our mercantile interests abroad, and the consular reform law, though by no means final, is a long step in this direction.

ECONOMY IN COAL.

In addressing the Glasgow University Engineering Society the other day, the president, G. T. Beilby, said that there are in Great Britain steam engines and boilers with a yearly output of at least 5,000,000 horse-power. The coal consumed by these is not less than five pounds per indicated horse-power, or, on the whole, 40,000,000 tons. By the use of gas engines and steam turbines the coal consumption might be reduced to one and one-half pounds per indicated horse-power hour, or, on the whole, to 12,000,000 tons. The saving in coal, therefore, would be equal to 28,000,000 tons, valued at £9,800,000. The cost of making the change need not exceed £50,000,000, or, if the power is to be delivered as electricity, £60,000,000, or respectively $250,000,000 and $300,000,000.

Theoretical economies of this kind, he added, were often disregarded, but in the present instance they would amount to over 16 per cent on the capital expenditure, and still more would result if one takes credit for more efficient plant reducing working costs.

* * *

—Lethbridge, Alberta, is having a strike on its hands, the employees at the coal mines having quit work in the attempt to obtain higher wages. In a scrimmage between the miners and the police last week several people were badly hurt, and some houses belonging to non-union men have been dynamited or burned down.

* * *

—The increase in shipbuilding in Germany in the last twenty years has been quite remarkable. According to a recent compilation the capital invested in shipbuilding yards in that Empire in 1881 amounted to only £765,000 sterling, and the output of the yards was 23,986 tons. But by 1901, the capital employed was £3,300,000, or more than four times as much, and the output was 235,171 tons. The four largest shipyards employed 4,250 men in 1881, but the number had increased to 19,460 men in 1901. This ratio of growth shows what may be expected in another decade or two.

* * *

—The inspector of grain at Winnipeg has just made public some interesting statistics concerning last year's wheat crop. These statistics show that the inspections for seven months of the crop year totalled 51,235,506 bushels, being 11,448,506 bushels in excess of the entire inspection for the preceding year. Allowing seventeen million bushels for seed and flour, sixty-eight million bushels are accounted for, leaving seventeen million in interior elevators and farmers' hands for export. The quantity in interior elevators was greatly reduced during March, owing to heavy shipments to lake ports and light primary receipts.

* * *

—Some of the subjects to be discussed at the congress of Chambers of Commerce of the British Empire, to assemble in London on the 10th of July, are already made known. For example, "British Commercial Agents in the Colonies," "Cable Communication," "Canadian Bankruptcy Law," "Commercial Relations Between the Mother Country and Her Colonies," "Defence of the Empire," "Emigration," "Fast Steamship Services," "Food Supply," "Imperial Penny Postage," "Most-favored-National Treatment with British Colonies," "National Indemnity in Time of War," "Shipping Bounties," "British Capital in the Colonies." It is extremely likely that a somewhat unusual interest will be aroused by the first-named of these subjects, seeing that the United Kingdom is so handicapped compared with the United States by lacking commercial agents in her own possessions.

* * *

—The stream of immigration into Canada has started in good earnest, and bids fair to eclipse all previous record. In the first week of the present month the arrivals at Windsor station, Montreal, numbered 8,630, compared with 2,910 in the same week last year, and a significant fact noted is that probably 90 per cent. were of English origin. The scenes at the Windsor station have been of a novel character, with upwards of two thousand English men and women thronging the waiting rooms and platforms in a day. There was hardly an aged person in the whole party, we are told by the "Gazette" reporter, the large proportion of the newcomers being young men and women, with a fair sprinkling of children. There were babies by the score, and the big rotunda had the appearance of a picnic ground at times. One noticeable fact was the apparent prosperity of the party. The baggage room was taxed to its capacity, tons of boxes and trunks being handled.

* * *

—Mr. A. P. Low, director of the Geological Survey of Canada, spent parts of 1903 and 1904 in Hudson Bay, being then in charge of the whaling-ship "Neptune," sent up to settle doubtful questions as to the navigability of the Straits and Bay, and to assert the authority of Canada over that sea. He wintered in Fullerton Bay, which, we believe, is on the west side, north of Chesterfield Inlet, and 500 or 600 miles from the western end of the Straits. He says of the resources of Hudson Bay that "fish are so abundant that a couple of drags of a net some sixty feet long yielded no less than 6,000 pounds." . . . "Neither the Bay nor the Strait is wholly frozen over at any time in the year. The ice forms for some 60 or 70 miles from the shore. . . . Copper on the west side and iron on the east side of the Bay have been discovered during chance trips, and excellent mica is being taken by a Scotch company from the northern shore of Hudson Strait." . . . These vast northern regions [Labrador and Hudson Bay] in Mr. Low's opinion undoubtedly contain much and varied stores of mineral wealth.

* * *

—Chicago city elections, held about ten days ago, were of more than usual interest, because of the fact that municipal ownership of the street railway was the vital issue. Three propositions were submitted to the voters, the first of which was:—Shall the city of Chicago proceed to operate street railways? This proposition required 60 per cent. of the total vote cast in order to become effective. The total vote was 231,171. Of this number the proposition to proceed to the immediate operation of the street railways secured but 120,900 votes, about 17,792 short of the necessary three-fifths. The second proposition involved the approval of the issue of street railway certificates in amount not to exceed $75,000,000 for the purchase, ownership and maintenance of the street railways. This was carried by 110 008 to 106,669. The third question was:—Shall the city council proceed without delay to secure the municipal ownership and operation of the street railways under the Mueller law, instead of granting franchises to private companies? This proposition was carried by 111,862 to 108,025, a narrow majority, but sufficient.

* * *

—United States lumbermen are apparently deeply interested in British Columbia timber. One of the best indications of the interest of American lumbermen, says the Vancouver "Province," is the purchase by them of Mr. L. M. Proctor's half interest in the Fernie Lumber Company, the price paid being $37,000. It is said that Mr. McDougall, who owns the other half, is being asked also to sell. The buyer was Mr. James M. W. Hall, of Boston, president of the Machias Lumber Company, of Machias, Maine. A number of these Eastern men personally visited Kootenay, to look the district over. Michigan lumbermen, comprising E. Ealey, C. Yonkey and Rufus Smith, have secured the fine limits on the shores of Violin Lake, about five miles from Rossland. A couple of years ago these were bought by Mr. G. M. Annable, of Moosejaw, and associates, and they have cleared a handsome amount by holding them for that time. The Michigan company will erect a mill at Trail. American capitalists are also, it is declared, behind the Edmonton Lumber Company, which has been incorporated with a capital of $60,000 to operate limits on the upper Saskatchewan River, with a mill at Strathcona. Messrs. A. H. Clark, J. A. L. McDougall and H. M. Wilson, of Edmonton, are also interested.

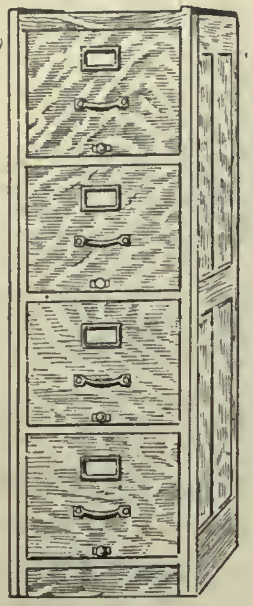
Bankers—Great Britain—The National Bank of Scotland. New York—The American Exchange National Bank. Montreal The Quebec Bank.

—It is stated that the shipments from seventy-six mines of the Yale-Kootenay district of British Columbia for the first quarter of the present year amounted to no less than 429,072 tons. This great increase is attributed to various causes—the increase in the price of metals, the recent reductions in the price of smelting, the erection of plants for supplying electrical power, the building of many new railroads, the erection of zinc plants for the treatment of lead-zinc ores, formerly thrown aside. The figures for the next few months are likely to be even much better on account of better roads for transportation, etc. It is, therefore, probable that the shipments for the whole year will approximate 2,000,000 tons, or an increase of 40 per cent. over the output of 1905, itself a banner year. Of the eight smelters in the district, the Granby has recently enlarged its plant from six furnaces to eight; the British Columbia Copper, the Canadian Reduction Works at Trail, the Hall Mines smelter, the Marysville and the Pilot Bay are all actively at work increasing their capacity, while the Dominion Copper has announced its intention of doing the same, and the new zinc smelter at Frank will probably be completed by May and in active operation. The total capacity of these smelters will be in the vicinity of between 50,000 and 60,000 tons weekly.



No. 10 Filing Cabinet

KAY'S OFFICE FURNITURE DEPARTMENT

Reliable Makes
— IN —
OFFICE FURNITURE
— AT —
REASONABLE PRICES

We now devote a goodly portion of our Second Floor to a comprehensive display of Office Furniture. Included are roll-top and flat-top desks, office chairs, etc., in golden oak, weathered oak and mahogany, from reliable makers, and a splendid exhibit of Multi-Cabinet Filing Outfits, built by the famous Shaw-Walker Company, for whom we are the sole Toronto agents.

☞ We cordially invite business men to visit this new department of ours. They will see much to interest them, and even the most up-to-date may learn of new wrinkles for simplifying business and saving time and worry.

In this list we itemize a few good values in Office Desks, etc.:—

No. 1402—Roll-Top Desk, in solid oak, golden finish. Top measures 54 in. x 24 in. The writing bed, drawer fronts and top are of quarter-cut oak. The roll is quite low. The pedestals are fitted with seven drawers, including one book drawer **30.00**

No. 181—Mission Writing Table, in quarter-cut "weathered" oak. Top measures 60 in. x 32 in. Fitted with centre drawer and three drawers on each side of knee hole. Automatic locks. A particularly well made and handsome desk. Remarkable value at...... **41.00**

No. 101—Writing Table, in mahogany veneer or fine quarter-cut oak. Top measures 56 in. x 38 in. A very convenient type of desk, fitted with raised shelf, extending across back and at the sides. Eight drawers with automatic locks and two large extension slides. Price only **44.00**

No. 10—Upright Filing Cabinet (as per cut), made of fine quarter-cut golden oak, fitted with four drawers for filing letters vertically. This case is the latest development in multi-cabinet filing construction. It has capacity for about 20,000 letters. The drawers are fitted with extension slides, and will pull far out, so that the letters at the back can be referred to as easily as the front ones. Emphatically the best value on the market **24.00**

Additional four-drawer sections for attachment. **21.60**

No. 14—Writing Table, in solid oak, weathered finish or golden finish, top measures 48 in. x 30 in., fitted with cupboard, four drawers and two extension slides. Price only. **14.50**

No. 100—Standing Desk, 6 ft. long, strongly built of quarter-cut oak, golden finish, fitted with three drawers and book rack. Price only **20.00**

Can be supplied in 5 ft. length also.

No. 16—Typewriter Desk, a handsome design in solid oak, with quarter-cut top and drawer fronts. Top measures 48 in. x 30 in. Fittings include eight drawers and disappearing carrier for the typewriter. Extra good value at........................ **26.50**

No. 110—Roll-Top Desk, in solid oak, golden finish. Top measures 50 in. x 30 in. Fitted with eight drawers with raised panels, automatic locks. The writing bed is made of quarter-cut oak. Pigeon hole case conveniently arranged for papers, etc. Splendid value at **26.50**

Out-of-town residents should write for our Multi-Cabinet Systems Catalogue, which illustrates and describes the famous Shaw-Walker line.

Our new importations of Carpets include special lines of Wiltons, Brussels and Axminsters, in rich dark shades, for use in offices, waiting rooms, etc.

A telegram from St. John's, Newfoundland, dated 6th April, said that the sealing fleet had captured 320,000 seals. But we now find in the Montreal "Gazette" a later despatch of 8th April saying that the seal fisheries have been the best for twenty years, and the latest returns from the fleet indicate that 360,000 seals have been taken, against 177,000 for 1905.

While the State of Michigan may have gone backward in the production of pine lumber, it has been coming to the front in another wood product. In the number of tons of paper produced annually it stands fifth among the States of the Union. The combined capacity of the paper mills of the State is 2,397,000 pounds daily.—Mississppi Valley Lumberman.

Mercantile Summary.

The Consolidated Mining and Smelting Co., Rossland, B.C., has declared its first dividend of 2½ per cent. for the quarter ending March 31st, payable May 1st to holders of record April 25th. This declaration is at the rate of 10 per cent. per annum.

The Montreal and Great Lakes Steamship Company, in which Robert Bickerdike, of Montreal, and J. H. Hall, of Ottawa, are interested, has been granted a charter empowering it to build, hold, buy shares in and operate passenger, freight and other boats and barges for navigation, salvage and wharfinger purposes. Capital stock is $90,000.

The Galt Malleable Iron Company, Limited, proposes to make, purchase or otherwise acquire and deal in iron, steel, malleable castings, brass, copper, aluminum and articles made from the above materials. Hugh McCulloch, Jr., of Galt, and W. M. Davis, engineer, of Berlin, Ont., are interested in the new company, which has just acquired a charter from the Ontario Government.

A despatch from Montreal states that the Central Railway of Canada, formerly the Ottawa River Railway, has secured a strong financial backing in England and has purchased the Irondale, Bancroft and Ottawa Railway, planned to run from Ottawa to Kinmount, 150 miles, fifty of which are completed. The same company, it is stated, have also purchased the Ottawa River Navigation Company.

The mineral strike on the Never Slip property, near Grand Forks, promises well. The samples brought to town are said to be the richest ever produced from any local property. As a result of this new find the country around the Never Slip has been staked for miles. It is reported that the rich quartz ledge is 20 feet in width and 1,500 feet in length. This property is owned by Messrs. Simpson, Stewart, Hutton and Murphy, of Grand Forks.

It is announced by the Canadian Lake and Ocean Navigation Company that it will take the "Scottish Hero," a large freight vessel, off the coal and ore trade route between Cape Breton and Nova Scotia, where it is now running, and place it on the Upper Lakes freight service. The vessel will be brought to Quebec when the St. Lawrence channel is clear and there cut in two so as to allow it to pass through the canals on the upper St. Lawrence and at Welland.

A despatch from Cobalt, Northern Ontario, dated April 9th, tells of another large mining deal, the sale of the "Nova Scotia" mine to a syndicate of Montreal, Toronto and New York capitalists having been practically completed. The sum involved is said to be in the neighborhood of $400,000, besides which the new company is said to have acquired two neighboring lakes for a further large sum.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

The Lord Chancellor, Sir Robert Threshie Reid, introduced a bill in the House of Lords on Saturday last making bribery and bankruptcy extraditable offences in accordance with the Anglo-American convention.

After forty years spent as a merchant in Granby, Que., Mr. Louis Pare is retiring, after an active and honorable business career since 1865. He has sold out his stock, we are told, and rented his store to a new firm.

On Saturday last there was launched from the Canadian Shipbuilding Yards the Dominion Government's new quarantine steamer "Alice," the first of its kind to be built in Toronto. The vessel is of the modern tug type, and will be stationed at Grosse Isle. Her length is 128 feet and breadth nearly 27 feet, with a speed of about 12 knots.

On the 4th inst. Gad's Hill, a village a few miles distant from Stratford, Ont., was visited by a disastrous fire. Among the property destroyed were the flour and saw-mills of J. F. Retz, W. Miller's barn and stables and public park. There was but scanty fire protection. The losses are estimated at $15,000. On the same day the post-office at Centreville, N.S., together with a large general store, occupied by J. C. McGray, was destroyed, with a loss of $12,000 and only $4,000 insurance.

What will be the largest gas reservoir in British Columbia is just now being completed by the Vancouver Gas Company, who expect their capacity to be thereby doubled. The huge tank, which will cost not far from $30,000 when completed, has a capacity of $150,000 cubic feet of gas. This is half as much again as the combined storage capacity of the two previous tanks, as one of these was of 40,000 and the other of 60,000 cubic feet capacity. After the new reservoir is put into use there will be a total storage capacity of 250,000 cubic feet available, which will make the gas supply steadier, and also improve the quality of the illuminant.

In speaking to members of the Young Men's Christian Association the other day Hon. George W. Ross gave some sensible advice as to equipping themselves for the battle of life. He urged these young men to keep up the general culture of the mind, even in these days when specialization is a feature in education. Another timely and much-needed advice given was this, that Canadians should learn to speak good English, and to do this they should keep their general conversation free from slang, which is so greatly in vogue to-day. He urged them to read history, and to know the story of Canada thoroughly. History helped to make good, intelligent citizens. They should read poetry. By the poetry men read one could judge their character and their temperament. Poetry, Mr. Ross says truly, has a charm of its own, and exercises a refining effect on men, often beautifying their lives.

Mercantile Summary.

Sir A. P. Caron and Hon. Senator Edwards have been elected directors of the Canada Central Railway.

Local capitalists are organizing a company to establish a canning factory at Tilbury, Ont., and the village has voted a bonus of $5,000 to assist in the enterprise.

Fourteen out of seventeen shingle mills of Ballard, the greatest shingle manufacturing place in the world, are idle, the result of a general strike against the mills in that city. So says a paragraph of last week from Seattle, Wash. The issues are a slight increase in wages and the open shop principle. The close of the Ballard mills will decrease the general output by nearly 3,000,000 shingles per day.

On Saturday last the announcement was made by Drummond, McCall & Co., of Montreal, wholesale agents of the Algoma Steel Company (Superior Consolidated), of Sault Ste. Marie, that the company had closed with the Grand Trunk Pacific Railway for 50,000 tons of 80-pound steel rails, delivery to begin this season. It is understood that these rails are to be used on the section from Port Arthur to Superior Junction.

A Montreal news item states that a company, composed mainly of directors of the Mexican Light, Heat and Power Company, has bought the Mexican Consolidated Electric Railway, which operates in the city of Mexico, from the owners, Wehrner, Beit & Company. The capital stock is eight millions, all of which has been subscribed in London. Application is to be made for a Canadian charter, and the interests of the company, we understand, will be much in common with the Mexican Light, Heat and Power Company.

The recently-made strike at Le Roi mine continues to attract much attention. Drifting is still in progress on the 800-foot level west of the big Josie dike, and the ore body has been drifted on for about 140 feet. The ore is said to maintain good, high values throughout. The Velvet-Portland, another Rossland proposition, which has been shut down for a year, is to be started in a few days. Preliminary work is in progress. Since the mine ceased operations the company has been reorganized.

The steamship "Monteagle," which the Canadian Pacific is bringing out from England for service on the route between Vancouver and Yokohama and Hong Kong, will be able to take an immense quantity of freight, a great deal more, it is said, than the combined deadweight freight-carrying capacity of the three "Empress" liners. It is gratifying to learn that import and export trade between Vancouver and the Orient has been growing so rapidly during the last four years that the C.P.R. has found it impossible to handle the tonnage offered with its fleet of five steamers, consisting of the "Empresses of China, Japan, and India," and the "Tartar" and "Athenian."

STRONG TO PAY—FAIR TO SETTLE

FIRST ANNUAL REPORT
OF THE
Imperial Guarantee and Accident Insurance Company of Canada
FOR THE FIVE MONTHS ENDING 31st DEC., 1905.

THE DIRECTORS have much pleasure in submitting to the Shareholders their First Annual Report, which represents the business done during a period of five months only, from 1st of August to the 31st of December, 1905.

ASSETS — The Capital and Reserve paid in amounted to $250,000.00, all of which has been invested in bonds or is on Deposit in banks. The total Assets of the Company now amount to $269,422.38. The average rate of interest secured is 4 per cent., so that the interest earnings alone are nearly sufficient to pay the Shareholders a dividend of 6 per cent.

Municipal and other debentures to the amount of $100,000.00 have been deposited with the Receiver-General at Ottawa.

BUSINESS — During the five months, 1,292 policies were issued for $2,952,283.00, the premiums thereon amounting to $28,087.41, of which there was paid $20,974.35, leaving outstanding $7,113.06, which is $1,321.10 less than the premiums on business written in the month of December.

DIVIDENDS — Although the Earnings have been sufficient to warrant the payment of a dividend on the Capital Stock, the Directors consider that in view of the short period the Company has been doing business it would be premature to do so.

The Certificate of the Auditors is appended to the Financial Statement as to the audit of the Company's affairs.

Toronto, Feb. 22nd, 1906. A. L. DAVIS, President.

BALANCE SHEET, DECEMBER 31st, 1905.

ASSETS.	
Stocks and Bonds	$200,900.00
Premiums due and unpaid	7,113.06
Preliminary Expenses, including cost of Charter	2,305.90
Office Supplies, including books, stationery, printed forms and advertising matter	1,840.04
Office Furniture	917.82
Advances to Agents	414.57
Interests accrued	316.66
Cash on hand and in banks	55,614.33
	$269,422.38

LIABILITIES.	
Capital	$200,000.00
Reserve for Unearned Premiums (Government Standard)	16,420.90
Reserve for Unfiled Claims	2.109.14
Surplus over Capital and all Liabilities	50,892.34
	$269,422,38

We hereby certify that we have audited the Books and examined the vouchers and securities of the Company up to December 31st, 1905, and have found the same to be correct; and also certify that the foregoing Balance Sheet is correct and represents the condition of the Company's affairs, as shown by the Books.

Toronto, 26th January, 1906. CLARKSON & CROSS.

The following gentlemen were elected Directors for the ensuing year: A. L. Davis, Hon. Geo. A. Cox, Hon. F. T. Frost, Elias Rogers, R. Bickerdike, M.P.; H. C. Cox, G. A. Morrow, J. J. Kenny, P. G. Goldsmith, M.D.; S. Burrows, and W. O. Tassie.

At a subsequent meeting of the Directors, Mr. A. L. Davis was elected President, and Hon. Geo. A. Cox Vice-President.

The Barber & Ellis Co. Limited
72 York Street

Mercantile Summary

James Davidson's saw-mills at Fort Coulonge, near Ottawa, have been completely destroyed by fire at a loss of $25,000 and insurance of $10,000.

S. Samuel G. Somerville, Toronto; Robert Bickerdike, H. Munderloh, C. A. Jaques, M. Jaques, A. Lefebvre, Montreal, and J. H. Hall have been incorporated as the Montreal and Great Lakes Steamship Co., with a capital of $90,000, and head offices at Ottawa.

The Ross Harris Company, Limited, Montreal, have been awarded by the Canadian Pacific Railway a fifty-mile contract from Parry Sound to Byng Inlet representing an outlay of over a million dollars. There is a good deal of track work, and the contract includes track laying and fencing.

The city of Calgary has ordered a 400 horse-power cross-compound Corliss engine from the Robb Engineering Co., of Amherst, N.S. This is a duplicate of an engine installed by the same city a few months ago. Two 150 horse-power Robb-Mumford boilers have also been ordered by the Marconi Wireless Telegraph Company this month from the same company for their station at Glace Bay, C.B.

Sir Adolphe Caron, Sir Henry Pellatt and Sir Frederick Borden are prominent figures in a new company which is being floated in London under the name of the Transcontinental Exploration Company. It already possesses coal areas on the Pelqua River, Cassier district, B.C., seven miles square, and also other large deposits on the Pine River, B.C., all within easy reach of the Grand Trunk Pacific, while they are also within a short distance of water. The capital of the company is $300,000. The coal is said to be of the very best quality, having been tested by English and Canadian experts, and as for the quantity, it is believed to be unlimited.

We glean some information as to development work in the Lardeau district of British Columbia from a Vancouver paper. Mr. Ehrehart, manager of the Lucky Boy group, intends after the first of next month to work those claims to their highest capacity. Ore shipments this year have been made to the value of $30,000, or about $150 per ton. Ore reserves at the Silver Cup promise to be better than ever, and shipments are expected to be larger. The owners of the Noble Five, where the big strike of galena was made last fall, intend to resume operations as soon as the snow goes off sufficiently. The ore as it was exposed before work was stopped is said to have been about 18 to 24 inches in width and 30 feet in length. A good strike was made on the Baltimore last fall, and the owners are preparing for work as soon as conditions will permit. The last round of shots put in prior to the close-down for the winter demonstrated that the face of the tunnel was plastered with galena.

AGENTS WANTED in every unrepresented District in Canada.

From the fact that the following stanza appears in the 1st April issue of "Jones' Magazine," and from the further fact that attached to it are the initials, "D. J. W."—possibly so attached by Senator Harris—we conclude that the lines were written in Brantford:

Success, my boy, is the aim of life,
And to live that joy to the full
You must get there through the door marked "PUSH,"
And not through the door marked "PULL."

—D. J. W.

The Grand Trunk Railway Company held its regular half-yearly meeting in London on the 5th inst., Sir Charles Rivers-Wilson in the chair. This gentleman stated that the past half-year had been a most prosperous one, though the expenditure was also largely increased. He expressed disappointment that the Canada Atlantic had not proved so far a success, but he hoped for a better showing in the future. Regarding the expenditure, he said the Railway Commission in Canada was composed of gentlemen who were prepared to take drastic measures unless the road was kept in good condition. He stated that a steamer would run from Charlotte to Port Hope to carry coal so as to save the long land haulage. Regarding the recent issue of bonds, the past year's management had been economical, but they had several new improvements, so they took the opportunity of a favorable state of the market to secure funds. The issue had been over-subscribed by eight millions. Sir Charles said the prairie portion of the G.T.P. would be ready next year to carry the harvest. Retiring directors Alfred Smithen, Colonel Firebrace and Sir Lawrence Young were re-elected, as were Returning Auditors Fred Whinney, London, and Charles Percy, Montreal. Dividends of 4 per cent. on guaranteed stock, first preference, £10 10s.; second preference, £10 10s., and third preference, £10, was agreed upon, payable April 20th. The report was adopted.

TORONTO MARKETS.

Toronto, April 11, 1906.

Drugs, Chemicals, etc.—Little change has developed since last report. Values of all lines of staples remain practically unchanged, but the market is dull and listless. Quinine is held somewhat firmly, however, on account of the results of the Amsterdam sales. Trade in the city and country is about average for the season. Advices from New York speak of trade being dull and of a hand-to-mouth character. The following report on chemicals was received this week from Manchester: There is latterly some falling away in the demand for the home trade, but against this may be noted an improved enquiry for export to certain markets; altogether the volume of new business may be considered satisfactory for this season of the year, and with most manufacturers already well engaged for some time ahead values in general continue steady. In the heavy alkali branch there is nothing of special interest. Caustic soda is perhaps rather slow, but in general a fair trade is being done. During the first two months of this year as compared with the first two months of 1905 the exports of bleaching materials show an increase of 2,507 tons, or £9,915, and soda compounds the surprising decrease of 3,116 tons, or £29,977. In the tar products branch there is latterly an improvement. Solvent naphtha continues firm, with a good business passing. Benzoles have not a large enquiry, but remain steady. Creosote is firmer and in good demand; consumers generally are taking deliveries well, and with a decreased production and increased consumption the outlook is good for this article. Crude carbolic is only steady; consumers are not disposed to pay any premium for forward delivery; in fact, some are not caring to purchase forward at all. Pitch has become steadier, and consumers are now looking ahead and trying to cover their forward requirements. Sulphate of ammonia is looking better, and a good business is being done. Amongst general chemicals borax advanced £2 per ton.

Dry Goods.—The remarks made last week respecting the position of various branches of the dry goods trade hold fairly good for this week also. There is no change at all in the situation of staples, either in the price or demand. Linen seems even higher in its tendencies. Trade in general keeps fairly active, but there is little of a new character.

Flour and Grain.—Wheat has advanced a fraction, but little business is being transacted just now. Flour is still dull, and the divergence between the views of holders and bidders still continues. The usual quotation for ninety per cent. patents is $3.05. Bran and shorts keep very firm, and the demand is greater than the supply. Rolled oats continue on the easy side. Oats, corn, barley and peas are nominally the same as last quoted, but no large volume of business is being carried on.

Hides, Skins and Leather.—A fair trade is going on at the recently advanced prices for hides. The quality continues to show improvement. Tallow is rather on the dull side. In leather the promised improvement cannot be said to have materialized as yet, but the tone of the market is good, and dealers believe there will be an increased demand at an early date.

Hardware.—All lines of hardware and metals are moving in a reasonably active manner. Orders for spring requirements are coming in in a way betokening that the approaching season's business will be very brisk. Business is particularly active since the reduction of freight rates. All seasonable goods are being asked for in large quantities, and many sorting orders are being received. An English report of recent date said that February was a disappointing month in the pig iron trade, and the same must be said of March. Prices of Scotch and Cleveland iron have receded, and, although better again during the last few days, they are still some 6d. to 9d. per ton below the values at the beginning of this month. This is unsatisfactory, and especially so at this season of the year when demand should be improving; and in fact shipments are at present heavy. In the manufactured iron trade also there is less activity and an easier tone. Copper has had an active month, having advanced steadily some £5 per ton, and continues very strong. Tin also has improved some £4 10s., and is very firm, with a further upward tendency. Spelter, after receding in the early part of the month, has improved again, and is now quiet, with little actual change in value. Lead is slightly lower during the month, and is quiet.

Provisions.—Some butter of good quality is now coming in, and prices are firm at unchanged figures. Cheese also is very firm at the prevailing high prices. Not so many eggs have been coming forward, and the market is firmer at 17c. for new-laid. For storage 12½ to 14c. is the prevailing quotation. Receipts of choice poultry are not large and prices are good.

Wool.—Quotations are nominally the same, with little active trade being carried on. New clip in any quantity is not expected to arrive for two or three weeks yet, and the trade is adopting a "waiting" attitude.

MONTREAL MARKETS.

Montreal, 11th April, 1906.

Ashes.—Practically there is no business doing at the moment, while offerings from the country are light, and the total stock in store does not reach fifty barrels. We quote approximately: No. 1 pots, $5.15; seconds, $4.65; No. 1 pearls, $7 to $7.25 per cental.

Dairy Products.—Stocks of old cheese are about cleared out, and attention is being directed to new goods, for which it is reported 13 to 13¼c. per lb. is being paid in the country. The butter market shows strength, and local sales of finest new-milk butter are reported as high as 24c.; old creamery is quoted at 19 to 22c., according to grade, and dairy makes at from 16½ to 18½c. per pound.

Dry Goods.—Payments of retailers on the 4th instant were fairly met, several leading houses reporting the proportion met at from 75 to 80 per cent. A snowfall of eight or nine inches on Tuesday rather dampened the spirits of city retail merchants, but wholesalers report quite a considerable volume of sorting letter orders during the last few days. A great demand is reported for kid gloves, with a notable scarcity of stock in this line.

Furs.—The raw fur season is approaching a close, and receipts now coming to hand show deterioration in quality, particularly mink and skunk. There have been no recent material alterations in quotations, the recent advances as shown at the London March sales having been pretty well anticipated.

Groceries.—The week has developed little of an interesting character. Sugar values stand exactly as before, with only a moderate demand reported by refiners. For standard the factory price is $4.20 in barrels, and $4.15 in bags, with No. 3 yellow quoted at $3.80 in barrels. Some degree of increased firmness is reported in the molasses market in Barbadoes, owing to considerable buying by Newfoundland, and first cost is now quoted at 15c., equal to about 25½c., laid down cost. The local tea market has been a dull one for some time past, transactions being of limited extent. No definite estimate can be reached at this writing as to how the Japan market for new teas will open. There have been reports of frost damage, but these have not been fully authenticated. In Ceylons and Indians no recent variations have taken place. In other lines no noteworthy changes are reported.

Hides.—Values of hides are fairly maintained, dealers buying freely on the basis of 11c. per lb. for No. 1. Calfskins are offering in goodly numbers, and realize 13c. per lb. for No. 1, and 11c. for No. 2. Lambskins remain at 10c. each, with no very active movement.

Metals and Hardware.—A good, brisk movement is noted in both shelf goods and metals. Values continue steady to firm as a whole, though the tenor of some English advices would seem to indicate that manufacturers over there are not finding sales quite as active as they would like, and that they would probably be disposed to make some slight concessions. Galvanized sheets are quoted firmer at $4.20 to $4.45, being an advance of 10c. Tinplates are steady at $4 and $4.25 for cokes and charcoals, respectively: Canada, 52's, $2.60; black sheets, $2.40 for 28 gauge; Ternes, $6.85; boiler plate, $2.40; iron pipe, $4.39 for inch; bars, $2 to $2.05; nails, $2.10 and $2.15 for cut and wire, respectively. Ingot tin is again firmer at 42 to 42½c., in an ordinary way; copper, 20½ to 21c.; zinc, 6¾ to 7c.; lead, $4.35 to $4.45; antimony is again dearer at 19½ to 19¾c.

Window Glass.—There is great demand in the United States for window glass, and the production is also very large. At the same time that prices advanced in Pittsburgh, however, the market has developed an unusual feature, circulars being issued by one manufacturing concern, offering glass for future delivery at reduced prices. In the circular 90, 20 and 5 per cent. off the manufacturers' list is named for the first three brackets, and 90, 10 and 5 per cent. off for larger sizes, which is nearly 10 per cent. under the present selling price.

Wool.—Importers of raw wool report a very indifferent demand, actual transactions being confined to a few small, scattered lots. The next series of London sales opens on May 8th, when it is expected recent advances will be fully sustained. We quote: Capes, 18½ to 23c., as to quality; fine B.A., 44 to 45c.; medium ditto, 38 to 40c.; North-West, 21c.; domestic pulled, 29 to 30c. per lb.

FINANCES IN THE UNITED STATES.

Henry Clews & Co., New York, in their weekly circular, dated New York, April 7, 1906, say:

In spite of an adverse money market and the coal strike the stock market has shown surprising resisting qualities. Manipulation was credited with a portion of the advance which took place in the early part of the week, but the truth is, underlying conditions are so satisfactory that following the previous decline there was little difficulty in forcing a partial recovery. The money market, however, is still a controlling factor. Abnormally high rates have ruled for call money, and the period of stringency incident to April 1st lasted longer than usual. Such conditions usually convey a warning. There is still a very active demand for money from various sources. Legitimate demands for mercantile purposes are very heavy, owing to trade activity and high prices; while large sums are locked up in recent bond issues, and real estate speculation is also absorbing considerable sums. Available supplies of money are apparently exhausted; for we have been turning floating capital into fixed forms with too great rapidity, and this in spite of the large increase in our currency supply. As a consequence of extreme stringency there was a decline of sterling exchange rates, and moderate engagements of gold from abroad were announced. The condition of the foreign markets, however, is not entirely favorable to gold imports. While prosperity abroad increases the supply of available capital still very important demands upon the European money markets are impending.

The returns of many of our large industrial corporations are also gratifying, showing a continued industrial activity throughout the country which those in a position to judge anticipate will continue for some time to come. Of course, much will depend upon the crop outlook, that being the pivotal centre for future calculations; but with so many new enterprises under way or contemplated there is little prospect of any serious check unless an unforeseen disaster intervenes. The coal strike has had but slight effect. In the anthracite field it is not thought that the miners have a good case, since they are well paid and much better off than usual. Moreover, the large stocks of coal on hand are against any advances in price which would result from an increase in wages. It is quite evident that the public is wearying of these increased exactions, and has little sympathy with the present movement, inasmuch as the public must foot the bills. The bituminous situation is rather more serious, since soft coal is chiefly used for industrial purposes, while anthracite is largely confined to domestic use, now at a minimum. Any important interruption in the supply of bituminous, therefore, could not but have a serious interfer-

ence with industry, particularly in the iron and steel trade. The bituminous operators, however, find it more difficult to agree, owing to the widely different conditions of operation, and a total suspension of this product is very improbable.

The future of the security market is uncertain. Values are now very high, although so long as present satisfactory conditions continue no important recessions are probable. But no important bull movement can be expected when prices are already at the top notch, and when any heavy speculative movement might quickly be brought to grief through threatened limitations of the money market. The recent experience in the money situation and its outlook for the immediate future justify me in saying that people seeking investments should now measure the value of bonds and stocks by the rate of interest or dividends which they pay, and that first-class bonds should not be bought to return less than 4 per cent. interest and a similar grade of stocks 4½ per cent. dividends. Buyers of securities, if governed by this rule, are not likely to lose money in their operations, otherwise they run the risk of doing so.

* * *

THE SECRET OF SUCCESS.

So many people have a secret leaning towards speculation; are dazzled every day by the sight of a few men made immensely rich by chance; and lose sight of the many, many more thousands who have made not only nothing, but who have lost all they had.

As you look at the shower of gold in the world it all seems like a gamble, like a game of chance. You do not think of the days and nights of work and toil that went to the gathering up of all this wealth. You see only the gold, the money in rivers and streams. But there is only one road to success in life—the road of industry, energy, thrift.

Industry, energy, thrift. These are the only dice that win.

The lesson is hard to learn for the young. It seems so easy to throw the five little cubes out of the box, so much easier to get the coin without working. The finish is always as in the picture above. You become an old man, with trembling limbs and white hair, without friends, without resources, without hope.

Nature teaches that comfort and success in this life is due to thrift; that the days when nature was bountiful and showered its riches on us with open hands and asked little exertion from us in return have passed away forever.

Sometimes it may seem, when you hear that stocks have gone up, that men have bought them cheap and sold them dear, as though that were the way to fortune. Then you rush in by the thousand, and behold! you are the victims of the get-rich-quick swindlers.

There is no such thing as an honest gambler.

Every gamble is a dishonest scheme. You seek to get the other man's money without giving him anything in return.

You are not entitled to one penny in this world unless you have given value in return. If you are in business you know that every promissory note, to be valid, must bear on its face the two words, "Value received."

You must give to get.

There is an old-fashioned book, not much read nowadays, Smiles' "Self-Help." It points the road to success, to comfort, although if its maxims were too carefully followed by everyone this would indeed become a sordid world.

Everyone cannot become rich. Do not think that industry, energy, thrift, and all the other wise maxims of themselves will bring you fortune. If that were true and everybody in the world hoarded their earnings and denied themselves not only luxuries, but necessities, this, indeed, would be a miserable world, and its progress would be at an end.

But energy, industry and thrift can bring you something better than wealth or fortune. They bring success.—New York American.

* * *

—A parallel has been found for the young curate who said, when reading in church the lessons for the day: "Here endeth the first innings." An English curate on Saturday was beaten in a golf tournament by a putt on the last green. This seems to have preyed on his mind, for on the following day he gave out his text as follows: "In the eighth chapter and the thirty-sixth verse of the Gospel according to St. Mark you will find these words to be written: "For what shall it profit a man if he shall gain the whole world and lose the last hole?"—New York Tribune.

J. C. Roy, Quebec, jobber of shoe findings, whose failure we noted several weeks ago, has arranged to pay 25 per cent. upon liabilities of $5,430.

WHY WIFEY GETS OUT OF HUMOR.

"Want to buy some pins, lady?"

"No, I thank you." The door closes.

"Matches, lady?"

"No, thanks." Door closes.

"Shoelaces, lady?"

"No." Slams door.

Forty times the wearied housewife opens the door, pokes out her nose, ejaculates "No!" and withdraws.

The soap agent, the vegetable vendor, the mopseller, the rug man, the insurance solicitor, the grocer, the butcher, the baker, the whooping-cough cure dealer, the metal polish seller—whew! What a list! More anon!

Finally, late in the evening, hubby wonders why wifey is out of humor.—Detroit News.

NOTICE

NOTICE IS HEREBY GIVEN that it is the intention of The Canadian Bank of Commerce and The Merchants Bank of Prince Edward Island to apply to the Governor-in-Council of Canada for approval of an agreement between the said Banks for the purchase by The Canadian Bank of Commerce of the entire assets of The Merchants Bank of Prince Edward Island.

This notice is given pursuant to Section 39 of the Bank Act Amendment Act, 1900, and such application will be made after this notice has been published for at least four weeks, as required by the said Section.

B. E. WALKER, General Manager,
The Canadian Bank of Commerce,

J. M. DAVISON, Cashier,
The Merchants Bank of Prince Edward Island,
10th April, 1906.

Mercantile Summary.

David Meyer, who started in Montreal in the spring of 1904 as a small jobber of woolens, tailors' trimmings, etc., is reported an absentee, and his estate is in the hands of Wilks & Michaud, accountants.—A demand of assignment has been made upon Cleophas Renaud, of Montreal, a dealer in hay, grain and coal. His liabilities are put at about $2,000.

A Montreal failure which is creating much comment at the moment is that of the New York Skirt and Cloak Manufacturing Co., of which concern Lewis Berger is the apparent sole proprietor, though one Shuloff, said to be of unfavorable business antecedents in New York, has been more or less interested. They have been doing a business of about $75,000 a year, and now show total liabilities of some $115,000, $30,000 being indirect to their bankers. In all, there are about 130 creditors, scattered over Canada, the United States, Great Britain, Germany, France and Switzerland.

Apparently tired of the experiment, F. X. Langlois, who only engaged in the boot and shoe business in St. Johns, Que., last January, buying out P. Courville & Co., is reported an absentee, and a demand of assignment has been issued.—Telesphore Simard, formerly a farmer at St. Tite des Caps, Que., began storekeeping at Beaupré, near the Montmorenci Falls, about five years ago. Apart from his want of experience, his habits gave occasion to some comment, and in March, 1904, he failed, with liabilites of $3,400, which he compromised at 50 per cent He is again in trouble, and has assigned to Lefebvre & Taschereau, accountants, Quebec.

A Winnipeg authority summarizes the railroad construction work projected for this season in Western Canada at 2,250 miles, and the extension of the telegraph system will be in proportion. The C.P.R. alone will build 610 miles of new pole lines along their system, and stretch 4,068 miles of wire, 1,966 of which will be copper. A copper wire will be erected from Montreal to Winnipeg, which will be worked duplex (two circuits). This will make four double circuits in use between these points. A copper wire from Montreal to Toronto, worked quadruplex (four circuits), will make four quadruplex wires (sixteen operators at each end) between these cities, in addition to railway and way wire. An iron wire from Montreal to Ottawa will be worked quadruplex, in addition to the one now in use, and a cable will be laid between Prescott and Ogdensburg for the railway service.

From Nova Scotia we learn of the following late failures: J. J. Chaisson, an invalid, doing a small store business at Friar's Head, principally in groceries and confectionery, has assigned to G. O. Forsyth.—Capt. Norman Ray, operating as a dealer in groceries, flour and feed at Margaretsville, in Annapolis county, has unexpectedly made his creditors an offer of 25 cents on the dollar. His main liability is in St. John.—In the summer of 1904 Norman K. McLeod, general dealer, at Sydney, arranged for a general extension. He has, however, been unable to realize on his assets and carry this settlement out, and he proposes now to pay half of his liabilities off in payments spread over eighteen months and the balance as soon as he can dispose of his real estate to fair advantage. Personally, he is well esteemed, and, as he shows quite a fair surplus, it is thought he will secure the indulgence asked.—For thirty years Daniel Douglas has been in the tailoring business in Pictou, but not with any great measure of success. Some twelve years ago he made a compromise arrangement, and now he assigns. Liabilities are placed at about $3,500.—J. G. Lockhart and J. G. Chandler, doing business in farm implements, etc., at Windsor since the spring of 1905, are reported to be in seriously embarrassed shape, and Mr. Lockhart has assigned individually.

* * *

—The Department of Agriculture, Ottawa, impressed not only by the evident demand of the public for a really good and unadulterated article of maple syrup, but by the fact that such is very difficult to obtain, owing to the presence on the market of large quantities of inferior, if not deleterious stuff, has prepared a very interesting illustrated bulletin, showing the importance of the industry to Canada, and describing the best methods of manufacturing the sugar and the syrup in the purest and most attractive form.

—It is a curious illustration of how local views or prejudices obscure men's minds to the plainest claims of abstract justice to find a Winnipeg newspaper abusing the mayor of that city for calling out the militia when the striking street railway operatives indulged in mob law. The police were unable to cope with the persons who were destroying property. In such a case the law provides that the militia may be called out. And so the services of the militia were employed and a stop put to the illegal acts of the mob. It may be that the action of the company in refusing to meet the demands of the men was deemed high-handed by the citizens, but this did not from any point of view save that of the anarchist justify the attempt made to destroy its property. Mayor Sharpe, the Chief of Police and his men did their duty during the strike; and they deserve credit, not abuse.

CORRESPONDENCE SOLICITED.

The Metropolitan Life Insurance Co.

(INCORPORATED BY THE STATE OF NEW YORK)

The Company OF the People, BY the People, FOR the People

ASSETS, $151,663,477.29

Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec, Ottawa.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395	per day in number of Claims Paid.
6,972	per day in number of Policies Issued.
$1,502,484.00	per day in New Insurance Written.
$123,788.29	per day in Payments to Policy-holders and addition to Reserve.
$77,275.94	per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave., New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $3,0000,00.00

NORTH BRITISH & MERCANTILE
INSURANCE COMPANY.

Total assets	$79,252,646 00
Canadian investments	8,280,742 00

Greatly in excess of any other fire company in Canada.

Losses paid since organization, over $134,000,000.

THE SAN FRANCISCO CALAMITY.

The sympathy and interest with which Canadians have watched the sufferings of the communities in the vicinity of Vesuvius during its recent eruption became intensified into horror at the news which arrived on Wednesday morning, of the partial destruction of San Francisco by earthquake and fire, the two disasters springing probably from the same cause in the bowels of the earth, be that cause what it may. For this peculiar interest in a calamity which strikes such a shattering blow at a very attractive and prominent city of the neighboring Republic, there is more than mere neighborhood to account. California is a state which for years past has attracted a particularly large share of attention from Canadians; and at the present time it must possess many thousands of residents who went there originally from the Dominion, and not only this, but each winter and spring it is the Mecca of hundreds of well-to-do Canadian tourists. Thousands of homes in Canada, particularly in Ontario, will be in a state of anxiety until news of a definite character reaches them as to the casualties. It is quite evident that much of the information which so far has reached the outside world is of a vague, even wild character. Telegraph wires are largely ruined, and communication from many districts entirely cut off.

What is known, however, is that the earthquake came at about 5 in the morning, when most of the inhabitants of the city were in bed; they rushed out into the streets where many of them were immediately overwhelmed by falling walls and roofs. To add horror to horror, fire broke out at several points simultaneously, and as the water mains and many fire halls had been ruined by the seismic disturbances, it spread with alarming rapidity. There is no doubt that many of the largest buildings in that city of fine structures have fallen a prey either to the earthquake or to the flames. But when the reports speak of San Francisco being almost wholly destroyed, they must surely be exaggerating, for they also state that the damage is estimated at something under $100,000,000, a figure which would be greatly exceeded were the former strictly accurate. Again, we are told that the new City Hall, which cost $7,000,000 has been practically ruined; furthermore, that the loss there is calculated at half a million. The two estimates do not tally at all. The loss of life is variously estimated at from 200 to 1,000, though here again, this must be, under the circumstances, the veriest conjecture. It is to be fervently hoped that the first reports, as we surmise, have been greatly exaggerated, though as a matter of fact, the destruction appears to be growing worse with every bulletin that arrives. Not only San Francisco, but many other cities and towns seem to have suffered terribly. Santa Rosa is practically wiped out, with the loss of hundreds of lives.

News from the stricken city is far too meagre at present to form the basis of any reliable estimate of the liability of the insurance companies, practically all data being in the hands of local agents. The form or standard under which the business is carried on there makes them, we understand, liable for any fire loss, even the direct result of earthquake, so long as the building in question has not actually itself collapsed therefrom. We learn, that the total premiums collected in San Francisco for the year 1905, as calculated by the "Pacific Coast Review," were about $3,000,000, and that there were 105 British, Canadian, and American companies doing business there. Among Canadian companies, the British America received from that city last year $13,333 in premiums, and the Western Assurance Co., $17,458.

* * *

ANOTHER POWER REPORT.

Following the issue of the report of the Ontario Power Commission comes that of the Hydro-Electric Power Commission, of which Hon. Adam Beck is chairman; George Pattinson, M.P.P., and another gentleman, other members. A feature of the report is a voluminous appendix by Mr. Cecil B. Smith, the engineer, on the operation, transmission, and distribution of electric power; showing by means of an exhaustive series of maps and tables a plan for the distribution of power from Niagara through the southern and western parts of the Province. For this purpose it is proposed to divide it into five sections, with centres respectively at Hamilton, Toronto, Guelph, London, and Windsor. It is calculated that a market for 50,000 horse-power can be obtained as soon as the transmission lines could be constructed, and for 100,000 horse-power within five years afterwards. The suggestion is made that a right of way be purchased for a transmission line over the entire Niagara power district, between Toronto and Sarnia. The commissioners state that recent sales of large blocks of power at Niagara at $12 per twenty-four hour horse-power, determined them to accept that figure as a basis of calculation for the cost of transmitting power from that point.

Cost prices of power delivered to consumers at four typical points are calculated, including 25 per cent. allowance for future growth with annual charges of operation, repairs, replacement fund and interest at 4½ per cent., and power lost on lines and transformers. These figures are for 24-hour power per horse-power per annum to the consumer: At St. Thomas, for a full load of 2,000 horse-power $26,03; three-quarters load, 1,500 horse-power, $29.06; half load, 1,000 horse-power, $35.08. Berlin, full load, 3,150 horse-power, $18.48; three-quarters load, $19.52; half load, $22.91. Galt, full load, 1,750 horse-power, $22.56; three-quarters load, 1,312 horse-power, $24.74; half load, 875 horse-power, $29.56. Toronto, full load, 50,250 horse-power, $16.53; three-quarters load, 37,687 horse-power, $16,91; half load, 25,125 horse-power, $17.15.

A saving to Toronto of no less than $684,000 a year is calculated including $53,000 on the pumping station, $217,200 on the street railway, $144,800 on the Electric Light Company, $100,000 from steam power displaced, and $169,000 by taking over the electric light plant at $2,000,000 valuation. For the installation of a new power house an intake site is proposed immediately above that of the Ontario Power Company at Niagara, with an alternative site eighteen miles west of the Falls, where double the head can be obtained and only half the water required for the same power.

For the sake of fairness, however, it must be said that the conclusions of the Commission have not been allowed to go unchallenged. For example, Mr. J. Stanley Richmond, an electrical expert, staying in Toronto, writes to the "Globe" of Wednesday last an interesting letter, analyzing the figures of the report and the conclusions drawn from them. He declares that even on the showing of the figures presented by the Commissioners, their conclusions as to the cost of delivering power to the consumer in Toronto are not warranted. The report, for instance, states that power from a 50,000 horse-power plant could be sold in that city at $16.53 per horse-power per year. Mr. Richmond, however, contends that, allowing for the greater length of the tail or head race which would be required for a new venture, also for the cost of step-down transformer plants, or low tension cables necessary for distributing the power, also for the waste of efficiency in generators on the transmission line, the cost price would be $27.73 per horse-power per year delivered in Toronto, and this does not take into account the fixed annual charges incurred for the initial cost of above-mentioned distribution apparatus. A reply from Mr. Cecil Smith on these points, which would seem to exercise a very modifying influence over the tempting proposition held out as a result of the commission's labors will be awaited with more than usual interest, for Mr. Richmond was one of the experts who collected the facts on which the report of the Power Commission was based. What appears clear thus far is a serious difference in the conclusions of different electrical engineers drawn from the same data.

MANITOBA HARD WHEAT AT A PREMIUM.

A circumstance which marks the enterprise of the Winnipeg Exhibition board in addition to their sense of the importance of preserving the quality of Canadian hard wheat as the best in the world, is the enlargement of the amount offered in prizes for wheat at the coming exhibition in the present year. Indeed we are told that the sum of them is trebled as compared with last year. The amount to be devoted to wheat prizes is five hundred dollars, a very liberal sum. The principal premium, and one which is likely to attract a great many competitors is that of $200 for the best twenty-five bushels of red Fife wheat, $100 for the second best, $75 for the third, and $35 as the fourth prize. There are also minor prizes of $20, $10, $6 and $4 for five-bushel lots of red Fife, Preston, Stanley, or Huron, and $20 and $10 for five-bushel samples of Alberta red winter wheat. It will be observed that no prizes are offered for white wheats, not even for white Fife. The prize list of the Winnipeg Summer Fair has other praiseworthy features which mark the management as liberal in their ideas. The aggregate amount offered in prizes for Short-horn cattle is not less than two thousand dollars, while a sum of seven hundred dollars represents what will be given to the winners of prizes for Clydesdale horses.

THE "VALENCIA" WRECK DISCUSSED IN PARLIAMENT.

The terrible loss of life in the wreck of the steamship "Valencia," off the British Columbia coast in January last, is a subject which still stirs discussion, not only in the vicinity of the disaster, but in the House of Commons at Ottawa. An animated debate took place last week in which the Dominion Government was the recipient of not a little censure on the ground that proper measures had not been taken for the better preservation of life in case of shipwreck, though it must be confessed the Opposition scarcely proved that the former was not doing its best to remedy the most serious defects. One speaker, Mr. Ralph Smith, of Nanaimo, pointed out that the crew of the "Valencia" had been obtained haphazard in San Francisco, and were largely inexperienced sailors, and that the captain knew but little of the intricacies of navigation on the British Columbia coast. He suggested, that while the Canadian authorities were not exactly to blame for this, yet they should exercise a better supervision over the character of the men who sailed ships in Canadian waters. He considered that the acceptance of merely an American certificate of an American vessel was not sufficient, but that the latter should be carefully inspected by Canadian officials.

It is satisfactory to learn that Hon. Mr. Brodeur, Minister of Marine, intends inaugurating a new and stringent system of aids to navigation and protection of life on the Pacific coast, which, it may be said, is not nearly so well protected as that on the Atlantic side. One thing under proposal is the compulsory pilotage of United States vessels in Canadian waters. The Department is also arranging for the erection of several more lights, the re-arrangement of the chain of buoys, the extension of the shore telegraph system, and the installation of wireless telegraphy. A wrecking plant will also be erected under subsidy from the government.

One point which is always to be borne in mind by those who are legislating for the safety of people who travel by sea is the recklessness of sailors themselves. The average captain or mate of our lake steamers, and the same is probably true of officers of craft on either the Pacific or Atlantic coast, will stretch his instructions to the uttermost, and will even crack the law's commands in order to make a record passage or to get ahead of another steamer, or with a view to personal advancement in case his boldness succeeds. Long familiarity with his marine surroundings gives him confidence. He is so accustomed to combating winds and waves that he expects them to buffet him, and is quite ready for the fight. As truly there as in the Mediterranean, he "surveys his empire, and beholds his home." Therefore he will take, as a matter of course, risks that affright a landsman.

Again, however, it should be remembered when apportioning blame for a marine disaster that owners or agents of steamers too often press their captains to be bold and make good time, it may be in order to keep faith in a contract, or it may be out of sheer greed of gain. This latter consideration is most apt to make itself felt in the late autumn when frost and snow and wind make the occupation of the mariner a precarious one upon either salt or fresh water. Where punishment comes to be allotted for a disaster, human nature feels more like punishing an avaricious brute of an owner than a reckless dare-devil of a captain, if the latter can show that pressure had been put upon him to "make time."

NEW BANKS AND THE MULTIPLICATION OF BRANCHES.

In our last two Financial Reviews, we have touched upon the remarkable activity which chartered banks display in the opening of new branches. And we have stated that the feverish anxiety for business which some of the banks are showing leads us to wonder whether applications for credit are in all cases considered as carefully and dealt with as conservatively as they should be. New banks already established and others projected indicate a belief that the present general briskness in business of every kind is destined to last indefinitely.

That the extraordinary number of bank branches placed in cities, towns, and villages, are all justified, appears extremely doubtful. We know that in many cases branches of old-established banks in Canada have been so placed in towns where one, two, and three agencies of other banks already existed *because* customers of the older institutions have insisted upon them, with the alternative that in the case of refusal such customers might remove their accounts to newer institutions which offer greater facilities. In the April number of the "Canadian Bankers' Association Journal" appears an editorial article upon new banks and the multiplication of branches; and it has some cautionary words which emphasize what we have said upon the subject. These remarks we subjoin:—

> The "Journal" has frequently been requested to express an opinion upon the extraordinary multiplication of branches, the creation of new banks, and the necessity for same. It is not easy to determine the chances of success attending the operations of the latter. They should prosper under prudent management. But good intentions without experience or ability are not sufficient to ensure safety and efficiency in the employment of money. At present, natural conditions are favorable to a prolonged period of prosperity, and thereby an element of danger is created. That element is over-confidence. The extraordinary growth in the business of the Dominion of Canada has not led to any revelation of inability on the part of the existing banks to keep pace therewith. Yet, perhaps, it is natural that, tempted by the success which several of our financial institutions have achieved, new banks should be organized.
>
> Indisputable evidence that the field is already more than occupied will not prevent industrious promoters from offering to investors stock in new banks, and if these investors are not fully alive to the liability they assume as holders of bank stock, it is hardly the duty of the sellers of shares to impress the fact upon them. This important and interesting clause of the Bank Act ought to be made clear to them in no uncertain terms, however.
>
> Possibly the best way of making shareholders mindful of their liability in case of insolvency, would be to print section 89 of the Bank Act on every stock certificate:—"In the event of the property and assets of a bank being insufficient to pay its debts and liabilities, each shareholder of the bank shall be liable for the deficiency to an amount equal to the par value of the shares held by him, in addition to any amount not paid up on such shares."
>
> The main business of a Canadian bank is to receive deposits and to make loans, and their earning capacity is based on the cost of procuring and handling the deposits and the ability to lend same safely at good rates of interest. It seems so easy to manage a bank that, if it were not for occasional warnings bank shares would be even more overvalued than they are at present. To-day, competition is so keen that breaches of conservatism, deviations from the path of prudence and caution in banking, are attracting attention all over the country. History does sometimes repeat itself.

FEATURES OF THE GROCERY TRADE.

The strongest feature among groceries at the present time probably is the position of canned vegetables and fruits, which appear to gain in firmness every week. Tomatoes made another advance of 10 cents a few days ago, as high as $1.25 being given. There is great scarcity of this favorite line, while the demand continues particularly good, remarkably so in view of the high prices. Corn is becoming firmer, too. Other canned goods are quoted at about the same prices, but the general position is one of great strength.

In dried fruits also there is something more than the frequent firming up of prices, usual at this period. Currants are stronger than they were, but there is still considerable unsettlement in this market owing to its being unknown, or only guessed at, what the action of the "bank" will be as regards the overplus. Prunes have gone up about 1-2c.; some old stock, however, is said to exist still in the market, though not handled by the better-class dealers. Raisins are in a promising position. Great interest has been displayed in reports from the almond and filbert growing sections of Europe to the effect that serious damage has been done to the crops. Almonds have already gone up in price 1 to 2c. in the primary markets, and are moving upwards in sympathy in the consuming regions. Not much change has taken place in other nuts.

Quietness is the prevailing note in the sugar department, though a better tone has set in during the last few days. Foreign raw sugars have retrograded, however, to some slight extent during the week, though Cuban centrifugal is still nearly 1-4c. below the parity of beet sugar. It is said that the crop in that island during the coming season will reach at least the aggregate recorded last year. There is nothing new to say under the heading of syrups and molasses. Local market values are steady. Blackstrap molasses are quite firm. A report from the Barbadoes says the crop there is about three parts sold already, but that no changes in price are probable for at least a week or two. New stock maple syrup is now fairly plentiful, and values are a shade higher, with the quality perhaps of a slightly higher grade than usual. Just as we go to press we learn of a ten cent reduction in all grades of sugar.

Teas and coffees have both picked up a little so far as demand is concerned, Ceylon green teas have been selling more briskly than for some time past. Ceylon blacks are also in good request. China Ping Sueys are in no great supply. Not much is being done in Young Hysons. London reports an easier tone in most teas. No upward movement has been noted in coffee, though the tendency is in that direction. The current Brazilian crop is smaller than for the last two years, and prices on it are as yet unmentioned. Speculative interests in Europe are said to be trying to force prices up, but have not as yet succeeded.

Speaking generally, the grocery trade in the chief Ontario and Quebec centres, has been fairly good, while in the country districts it has shown a marked tendency towards dullness, but this is believed to be due not to any real falling off in the demand, but to the bad state of the country roads. This is a matter, however, which in most sections is now beginning to mend itself. No complaint is made, as a rule, respecting payments by retailers, which are considered fair.

* * *

WHY EXPORTS FROM BRITAIN TO CANADA DO NOT GROW.

In view of the greatly increased imports of Great Britain from Canada of late years, fair-minded people in this country perceive the wisdom of our endeavoring to buy from the United Kingdom a larger share of such manufactured products as are not made in the Dominion. It was with such an end in view that the Government of Canada gave to the Mother Country a preference by the partial remission of duty on British goods as compared with American, German, and other manufactured products coming to our ports.

Assuming, quite naturally, that this friendly desire, proved unmistakeably by the practical step of lowering our duty on British goods, would encourage export merchants in the United Kingdom to increase their shipments to us, various trade papers in Canada have sent representatives across the Atlantic in hope of inducing manufacturers and merchants in London and Glasgow, in Manchester and Bradford, in Birmingham, and Sheffield, to announce their wares through Canadian advertising channels, in the same way as American and Continental houses do. But the result of this effort has been shown in a most conclusive way—namely, by the coldest of cold shoulders being given to the trustful messengers who tried to show John Bull how to reach Canadian purchasers.

In past months the "Monetary Times" has pointed out, by several articles, giving the experiences in England of agents for Canadian journals, what barriers of indifference, of reserve, of absolute refusal of credentials, stand in the way of those whose aim it is to interest British exporters more largely in the Canadian market. Not only circulars and cards, but calls, backed up by letters of introduction, made no impression upon the attitude of haughty self-sufficiency which seems to characterize five out of six of the exporting houses of the capital and the Midland cities. "We cannot see you," says one; "We do not care to increase our trade," is the message sent through an office boy to another; "This house does not treat with advertising agents," declares a third; while the civillest one of a score of Midlands merchants could only unbend so far as to explain that the business calls of Montreal and Toronto men in search of advertising in the industrial heart of the Empire were "quite irregular, don't you know, and altogether unusual."

In vain was it sought to be explained by the visitor that certain British machinery or certain British textiles could meet with ready sale in Canada if their merits were placed before the proper dealers. The canvasser, where he was not shown the door, was refused access to experienced principals (who presumably could talk or listen with intelligence to a man familiar with the market), and obliged to endure the stiff-necked contumely of a wooden clerk. This is hardly the way to induce trade with a country that wishes to be commercially friendly, nay, with "a favorite colony," as we are assured by patronizing statesmen and gushing English newspapers, Canada is. What wonder that our messengers of commerce, finding themselves thus treated by their own kith and kin, should be ready to say: "Very well, you obstinate dictators, who though you may make the best goods in the world, do not know how to sell them, we will go to the Americans, who at least treat us with urbanity, and listen to our efforts to benefit them."

We are quite prepared to be told, by any one who reads this article, that advertising in special trade journals is only one means of reaching a mercantile community, and that our ways of soliciting trade are not always English ways. This may be quite true; but it does not follow that it may not be an effective as it undoubtedly is a legitimate means. A still further reason why Canadian canvassers for advertising are "turned down" when they call on British manufacturers doubtless is that they are not accustomed to bothering themselves with would-be importers in the colonies. The writer of this article learned when in the Midlands and London last year, that it is the shipping merchant in Britain who has to be convinced as to the utility of buying Canadian products, and the possibility of selling British goods in Canada. The maker of these goods is not acquainted with export trade, and relies on the shipping agent in Britain who buys from him.

Still, it may be well for the merchant of whatever kind in the United Kingdom to be told, often enough to make an impression on his lordly consciousness, that it is just possible he is not taking the best means to secure an increased export trade to this country if he persists in ignoring the trade habits of those whom he desires to become his customers. To have him say: "I will not buy Canadian wares if you will not pack and ship them and make the terms as I want them," is intelligible, and it is then the seller's part to meet him—or else do without his trade. If, however, the British merchant *wants to sell*, and tells his prospective customer: "See here, I was in business before you were born. My goods are the best in the world. I have been selling them in a certain way since 1799. You don't know how to buy, and you cannot have my goods unless you will agree to buy them in the way I recommend," it is a totally different proposition. The Canadian merchant may not know all he should about buying goods abroad, but he knows when he is snubbed. And he is very apt to say to the proud merchant prince of "our little mother isle, God bless her," that he can be served with less fuss and more satisfaction by producers in other countries.

Some illustrations of the kind of reception a man meets with when he goes over to try and interest British houses in Canadian import trade must be reserved for another issue. Our readers will find them rich though they are not rare.

EARLY PROSPECTS FOR THE CROPS.

The spring season is advanced sufficiently now to render it possible to gain a fairly definite idea as to the condition of fall wheat after it has passed through the winter. Some of the reports from Ontario, which is becoming an increasingly fall wheat Province, are adverse, but on the whole they are very encouraging, particularly so in view of the many dismal forecasts which have been made on account of the absence of snow. From Guelph, which is quite a centre of this industry, comes word that wheat has never passed a winter more successfully than the last. A few spots on the knolls look bare, but on the whole the plant never looked finer. It is browned somewhat on the top, but this is attributed to the light snow-fall, and the roots seem thoroughly sound and healthy. In Peel county, for instance, around Streetsville a remarkable improvement has set in during the past few days, and most people say there will be an average crop, if not one better than usual. Clover in that county has suffered somewhat, the frost having heaved it considerably on low-lying ground. There is still hope, however, for a fair crop even there. A different tale comes from the Bay of Quinte district. In Prince Edward county clover is said to have been almost ruined by the alternate spells of cold and warm weather, but wheat seems to have suffered less than expected. Port Hope reports are favorable. Chatham district farmers say the prospects for wheat are good, and some add "never better." Around Tilbury, in Kent, there is a larger acreage planted than usual. Spring seeding in this section is already well advanced. Both clover and wheat in the district around Kingston have suffered a good deal, according to latest reports, and many farmers will sow the latter again. Pastures, too, have been affected detrimentally. On sandy soil around Welland in the Niagara district the wheat crop, we hear, has not looked better than now for years. The wheat in the neighborhood of Brantford is well advanced, and the clover, barring untoward weather conditions from this time forward, will probably be fair. A good wheat crop seems assured near St. Thomas. Around Stratford, except in cases where it got a bad or late start, it looks very promising.

From Waterloo county comes word of a large increase in sugar-beet acreage, contracts having been signed for a total acreage of 1,769 acres.

In the Grimsby fruit district spring work has begun in earnest, and most observers state that the prospects for a good crop of fruit were never better than they are this year. It is anticipated by some that the strawberry crop will be light, but at present most beds look very good.

Interesting reports are beginning to be received from C. P. R. agents in the West. These indicate that seeding operations, while not in full blast, may be said to be general throughout the Western Provinces, and in some portions the work is far advanced. On the main line West seeding has begun at many points, Burnside, which includes Portage la Prairie, being the first district to report operations as general. Seeding is as fully advanced in the new Provinces as in Manitoba, especially in Saskatchewan. On the whole the spring is opening in a way quite satisfactory to those concerned in the grain crop, a large majority of agents report an increase of from 5 to 10 per cent. in the acreage of that crop sown. In rare cases an increase of 25 per cent. is reported, and in a few instances there is a small decrease. At certain comparatively new points the increase is still larger. Weyburn, for instance, reports an increase of 40 per cent.; Macoun, 65 per cent.; Dundurn, on the Prince Albert line, 50 per cent., and Stoughton, on the Moose Mountain, 35 per cent.

OUR AUSTRALIAN LETTER.

The Canadian agents seem to have stopped grumbling at Canadian manufacturers, though the causes, therefore, have not ceased. The Canadian trade is better done than it used to be, but is not better than it ought to be. One complaint made is the inequality of goods shipped. In some cases it is evidently due to the lack of proper supervision in shipments, the packer taking what comes to hand without proper inspection. In other cases it is attributable to the fact that the agent here has, to secure orders, cut the price and the Canadian manufacturers have cut the quality in accordance with the price. This is a serious mistake. The purchasers here expect the goods to be equal to the sample. The Canadian manufacturer is not bound to fill an order if his conditions have not been observed, and he should advise, not only his agent, but the Australian buyer of the fact. In no case, unless the buyer has assented to it, should lower grade goods than sample be sent.

The old story is constantly heard that orders have been refused because prices have gone up in Canada without the agent here being notified. He has taken the orders in Australia in good faith and only finds three months afterwards that they will not be filled. The Canadian manufacturer should cable changes of prices, and if he carelessly does not advise his agent he is in honor bound to fill at the old rate the order sent to him. Failures to do so may tell against his trade in a time when he will be more anxious for this market than he is to-day.

Another point that manufacturers seeking this market must carefully consider—the matter of introduction. There is some inclination on the part of large houses to make direct connection with the Canadian exporter, but still the probability is that no business will result from correspondence; and commission agents must be employed when a direct representative is not sent out. The great difficulty in this system is that the agent does business only with wholesale houses, who in reality do not introduce goods; and many lines which, if properly made known, could be sold here, utterly fail to get a recognition. As an illustration, a man was selling a very considerable number of Canadian washing machines. There was not a house, wholesale or retail, who would look at this line, though efforts had been made to get some one to take hold of it. This man securing the agency paid no attention at all to the trade, but went directly to the housekeeper, as Yankee clocks were sold in the olden times, and he reports that it is a rare case where he makes these machines known that he has to take them out of the house. The difficulty is to get a man of this kind, and still more difficult is it to get a firm who will import the goods and employ such a man to properly introduce them. Canadian exporters are, no doubt, beset with offers to introduce goods upon payment of a fixed amount in addition to the regular commission and, as some of them know who have paid it, without much success following. The payment of a certain sum is legitimate, but the Canadian exporter should have some assurance that the money will be expended for the purpose for which it is paid, and that the recipient knows sufficient of the trade here that he will not undertake to introduce a line unless he knows that the market will take it.

I notice in your columns that there seems to be some difficulty between the Canadian producer of hogs and the packer of pork. An effort has been made here to ship frozen pork to England and Scotland. The experiment was in a measure successful, but it was shown that the trade required chilled pork and not frozen, and that for the chilled pork there could be found a large market and good prices. It is impossible to ship chilled meat from Australia, but it may be possible to do it from Canada, for a considerable portion of the year, and if so it would furnish an additional outlet for the Canadian pig breeder.

A number of Australians will visit Canada this summer. Amongst those leaving by the April steamer are Sir Norman McLaurin, the late president and a present director, and Mr. Russell French, the general manager of the Bank of New South Wales. This is the largest Australian bank, and the presence of these gentlemen might be taken advantage of to discuss the drawing of drafts and some other banking matters in which both countries are interested.

Australia is taking advantage of the Chinese boycot of United States goods, to introduce Australian products. It is reported that some of those interested in the trade found that United States flour sent to China, Japan and the East contained a considerable percentage of corn-meal, which adulteration enabled them to sell cheaper than the producer of pure flour.

Mr. Reynolds, the general manager of the Pacific Cable, is in Australia, with a view of doing what should have been done as soon as the concessions had been made to the Eastern Extension Co.—opening up branches in the cities, independent of Government Telegraph Departments. He has as yet done nothing, for he is waiting the decision of the Eastern Extension Co. as to whether it will accept the agreement tendered to it by the Commonwealth Government, which it very much dislikes to do.

The latest estimates make the population of Australia 4,052,570, and that of New Zealand 882,457, making the total Australasian population nearly five millions. This shows a gain of 287,555 in the population of Australia and 111,777 for New Zealand in five years and, further, a gain of 3,114 of immigrants over emigrants for Australia, and 43,044 for New Zealand. This gain of immigrants in Australia is confined to New South Wales and West Australia, the other States showing a greater emigration than immigration. As stated, these figures are estimated, and it is somewhat doubtful if the Commonwealth has really gained anything by immigration for the last five years. The better condition of the country is lessening the number of emigrants, but still there is a flow of young men towards Canada, some of them having some means and others being mechanics and students of technical colleges who, finding little hope of employment, are leaving the country and going to Eastern Canada by the way of England. Very cheap rates can be obtained to London and very cheap rates from London to Canada, making the total considerably less than if they went by steamer to Vancouver and by rail across the continent.

The scheme of the new line of steamers from Vancouver to New Zealand appears not yet to have been fully worked out. Two steamers, the "Bucentaur" and "Afrikander" are to compose the line. One of them is a little over and the other a little under 2,000 tons net. They are to touch at six New Zealand ports in all, but only at three of them each trip, and Melbourne and Sydney in Australia. The "Bucentaur" is on her way here from Africa. Already growls are heard in New Zealand because the steamers are so small for the subsidy given and from the fact that they will only touch at the ports once in four months, which would do in the olden days when men laid in six months' supplies, but will not do in these days when merchants stock from hand to mouth. All lines have to have a beginning and this one is no exception. If unsatisfactory now it may grow to greater proportions. This will depend upon the transcontinental rates. The railways are giving just now very low rates, and if they can continue to do this there is some hope for the line, but if they jump up to normal rates there can be no future for it.

The returns show that Melbourne is gaining as an Australasian trade centre upon Sydney. Prior to the introduction of the Commonwealth tariff, Sydney had practically no tariff and Melbourne a heavy protectionist one. Sydney was, therefore, a cheaper point at which to carry stocks than Melbourne. Upon the passage of the Commonwealth tariff this difference was wiped out and the cities were placed upon equal terms. Melbourne is the headquarters of some of the largest distributing houses of Autstralia and Sydney has branches of these establishments. It is but natural that the head offices should do a larger business when upon even terms. Whether this will continue will depend upon the activity of the Sydney people. The conditions are favorable for Sydney's future, but Melbourne enterprise may be an offset to this. With the lower Commonwealth tariff the Melbourne business man sought vigorously for agencies for goods which the high Victorian tariff had debarred them from touching. On the other hand the Sydney man was depressed by the duties on imported goods of which he had. hitherto, no experience. So far as Canadian exports are concerned the Southern States are more inclined to take them than the Northern. Victoria, of all the Australian States, is more akin to America than any other, and hence more inclined to buy the goods of the type produced in Canada. This is seen in numerous instances. In New South Wales and Queensland two-wheeled vehicles are the rule and four-wheeled the exception, whereas in Melbourne and Adelaide, with streets better suited to them, four-wheeled vehicles are much more general. Melbourne, too, is the great Canadian centre of Australia. It is the head office of the Massey-Harris Co. and of the International Harvester Co., and it has a number of Canadians who have pushed Canadian goods. The Australian returns of trade for last year are not to hand, but they will, no doubt, show a general decrease in imports from Canada, though they should show an increase in imports into the Southern States of the Commonwealth.

Without first having obtained the consent of that lordly body—the English shipping ring—the New Zealand Government secured a line of steamers to run to the west coast of England. The ring could not prevent the steamers getting cargoes in New Zealand, but it boycotted them in England and had sufficient power to prevent them from getting return cargoes. The same ring has been carrying United States and German goods to New Zealand at a less rate than is charged upon British goods. These two things have aroused the ire of the strenuous New Zealand Premier, and he has announced that if this injustice is continued he will use the New Zealand surplus to put on a line of steamers that will smash the ring, and if it cannot be done in any other way the State will buy the steamers and run them itself. There is no doubt he means business. Canada, on examination I fancy, will find that its trade is hampered by that same ring. Just now the freight rates via the C. P. R. and steamers from Vancouver are very low, as they have been for some time, and the ring have put up freights via New York, so that Canadian exporters will find it to their advantage, unless the rates have changed, to ship by the All Red route.

F. W.

Sydney, New South Wales, 18th March, 1906.

* * *

SAINT JOHN BOARD OF TRADE.

In giving a resume of proceedings of the Saint John Board of Trade the other day we omitted to append a list of the officers and council, as had been our intention. We now supply this omission. List of officers:—

President, H. B. Schofield.

Vice-president, John H. McRobbie.

Secretary-Treasurer, W. E. Anderson.

Members of the Council—H. B. Schofield, president; John H. McRobbie, vice-president; D. J. McLaughlin, T. H. Estabrooks, W. H. Thorne, W. M. Jarvis, W. S. Fisher, Jos. A. Likely, Geo. E. Barbour, John Sealy, W. F. Hatheway, J. Hunter White, G. Fred Fisher, E. L. Rising, Geo. Robertson, W. E. Foster, S. Schofield, John E. Irvine.

Board of Arbitration—George McKean, Joseph Bullock, W. S. Fisher, Andrew Malcolm, S. S. Hall, James F. Robertson.

WESTERN BANK OF CANADA.

The bank's year ended with February, and its twenty-fourth annual meeting was held on Wednesday of last week. The report of the directors expresses satisfaction with the results of the year's business, which must be considered warranted when it is observed that net profits, $88,575, were equal to 16½ per cent. on the average paid capital. After paying dividend of seven per cent. it was found possible to add the sum of $50,000 to the reserve, which fund is thus made up to $300,000 on a paid-up capital ot $550,000. We remark that this bank has not joined in the recent *furore* for opening new branches, which has stimulated so many Canadian banks to an often unseemly haste in this direction. But there was the less need for any move of the kind in the case of the Western Bank, because it has already fourteen branches in half a dozen of the best counties of Western Ontario.

IS THERE A PROFIT?

Editor "Monetary Times":

Sir,—It is noticeable that certain newspapers in Ontario refer to the reports of the monthly earnings of the Provincially-owned Temiskaming Railway as indicating a profitable financial investment of public funds, and they argue therefrom that it would be a good idea to have the Province engage in railway building on a larger scale.

The example of the Dominion Government's experience in building and operating the Intercolonial Railway with its one or two million annual deficit does not seem to have been considered with the advocates of Ontario's engaging in the same sort of financial experiment.

In the roseate statments first referred to no account is taken apparently of the interest and brokerage charges inherent to the undertaking. The cost of the railway as appears by the commissioners reports is $42,600 per mile with partial equipment. The interest charge on this equals $1,704 per mile per annum, or on 200 miles it amounts to $340,800 yearly.

This item does not figure in the published profit and loss account so far as the writer's observation has gone.

That the Canadian Pacific Railway and Grand Trunk companies will soon have parallel lines of railway competing in this district for the local traffic can be assumed as a certainty. When these conditions arise will the Provincial railway system make a much better showing than the "Intercolonial" does at present. A discussion of this problem is certainly now in order, and opinion of yourself or other financial experts will be of special moment.

VERITAS.

Ottawa, 18th April, 1906.

BANKING AND FINANCIAL.

The shareholders of the Merchants Bank of Prince Edward Island have ratified the acquisition of the assets of that bank by the Canadian Bank of Commerce.

A Pittsburg financier is represented by the "Post" as saying to another: "Giving up anything during Lent?" To which the other replies, stiffly. "Why should I give up anything? I made my money honestly."

A meeting of shareholders of the Traders Bank on Monday last authorized an increase of $2,000,000 in the capital stock. This will raise the authorized capital from $3,000,000 to $5,000,000. None of the new stock is to be issued immediately.

The Canadian Bank of Commerce advises that branches of that bank have recently been opened in the following points:—Canora, Sask., Mr. H. J. White temporarily in charge; Crossfield, Alta., Mr. James Cameron temporarily in charge; Latchford, Ont., Mr. W. H. Collins temporarily in charge; Vonda, Sask., Mr. J. C. Kennedy temporarily in charge; Wingham, Ont., Mr. A. E. Smith, manager.

The offices on the ground floor of the Board of Trade in Toronto now occupied by the C. P. R. Telegraph Company have been leased, we are told, by the United Empire Bank. The Telegraph Company intends to remove into the offices occupied by the Lehigh Valley Railroad Company, which adjoin those used at present by the C. P. R.

The local branch managers of the Dominion Bank joined in a presentation to Mr. Frederick W. Broughall, assistant manager of that institution, who gives up his position to become general manager of the Sterling Bank. The testimonial was a handsome gold watch. The presentation was made by General Manager T. G. Brough. While regret was expressed at Mr. Broughall's leaving, he was warmly congratulated by the assembled officials on his prospects in the new position he assumes.

From London it is announced that Jabez Spencer Balfour, the former financial magnate, sentenced to fourteen years' imprisonment in 1895 for extensive frauds in connection with the Lands Allotment Company and the House and Land Investment Trust of the Liberator group of companies, has been released from the Parkhurst Prison, on the Isle of Wight. It will be remembered that the Balfour case caused a world-wide interest. He was a man of good education and pleasant manners, and succeeded in swindling thousands of people, especially persons belonging to the poor and middle classes of England, who, it is estimated, lost five or six millions of pounds sterling.

TRADE ENQUIRIES.

The following were among the enquiries relating to Canadian trade received at the Canadian Government office, 17 Victoria St., S. W., during the week ending 6th April, 1906:—The London agent for a leading firm of sardine packers is open to take up the agency for a Canadian house exporting canned goods; a London importer has asked to be placed in touch with reliable millers of rolled oats in Canada; also packers of beans and peas; a Scotch firm of commission agents would take up wholesale agencies for Canadian grain and flour exporters, and creamery product; a London manufacturer of boot trees, lasts and legging blocks, is seeking supplies from Canada of maple blocks, perfectly dry, cut to measures.

INSURANCE MATTERS.

In order to conform with the procedure laid down by the British Government for all ministers of the Crown, the Earl of Aberdeen has resigned the chairmanship of the British board of the Western Assurance Company, following his appointment as Lord Lieutenant of Ireland.

A little Rockland girl was preparing to say her bedtime prayer. Her grandmother, sitting near, said she must ask God to make the weather warmer, so grandma's rheumatism would get better. The prayer was ended with this sentence, "And O God, please make it hot for grandma."—Rockland Star.

Desirable as life insurance is, valuable as it grows and commendable as it may be, impossibilities are quite as beyond its accomplishment as under any other device of human ingenuity. For money paid upon a policy, better values are given, stronger guarantees are provided, greater returns are possible than under any other purchase that can be made.—Union Mutual Monthly.

We acknowledge the receipt of a communication from Mr. F. M. Griswold, chairman of the National Fire Protection Association, which has in view the adoption and provision of a standard thread for fire hose and hydrant couplings by the fire brigades of the United States and Canada. This is a matter of very great importance, especially in case of conflagrations, where it may be necessary for one town or city to ask the help of adjoining towns. We purpose dwelling upon the matter at some length in a subsequent issue.

According to a compilation of the figures of forty-four companies made by the "Insurance Press," level premium life insurance companies (not including industrial companies) wrote $14,000,000 less new insurance in the State of New York in 1905 than in 1904, whereas they should have written about $12,000,000 more, according to the normal annual increase shown in recent years.

In an article elsewhere on the earthquake and fire of the present week in San Francisco and other parts of California we have given some figures which will give an idea of the extent to which Canadian fire insurance companies will be affected by their policies in those localities. Hitherto, San Francisco has been regarded as a profitable field for fire underwriters. The present disaster, immense as it appears to be, must result in a heavy draft upon insurance organizations if, as is stated to be the case, the companies propose to waive the clause in their policies which releases them from liability for earthquake destruction and fire therefrom.

The Western Union of fire underwriters met last week at Atlanta, Ga. This was a semi-annual meeting. President Cofran, in his opening address, made an earnest plea for better co-operation in the face of adverse conditions. He dwelt upon the steady reduction in rates and the need for companies to prepare themselves for the problems this would bring. He urged the elaboration and extension of the present system of schedule rating. The governing committee reported in favor of the appointment of an actuarial committee to take charge of all matters pertaining to rates, rating and schedules. The next meeting of the Union will be held at the Thousand Islands in September. Thursday evening the Atlanta insurance men treated the visitors to a Georgia barbecue.

* * *

—An important feature of the report of the Committee on Transportation, just issued at Ottawa, is the recommendation of a new line of steamers between Halifax and Liverpool, England, for purposes of Imperial defence and quick mail transit. The commission recommends that the Imperial Government be negotiated with for a joint subsidy to a company for a first-class steamship service, bi-weekly at least, between Halifax and Liverpool, the same to carry British mails for this continent and dependencies on the Pacific and the far East, also Canadian mails, and to be especially adapted for the carriage of dairy products, chilled meats and other perishable freight, and fast freight and export goods; also to be sufficient to meet all requirements of the British Admiralty for carrying troops or other service in time of war. The recommendation is also made that a similar fast service in the Pacific Ocean to the far East be established as the requirements of trade may demand. The report comments favorably on the Hudson's Bay route, and urges the Government, as soon as the railway is built from the wheat fields of the North-West to a deep-water terminus on the Bay, to appoint capable engineers to lay out a good and commodious harbor on a comprehensive plan.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ending with Thursday, April 19th, 1906, as compared with those of the previous week.

The low figures of this week will be accounted for by the Bank Holidays, of Good Friday and Easter Monday.

	April 19.	April 12.
Montreal	$20,625,346	$28,088,196
Toronto	$17,315,052	21,207,778
Winnipeg	7,245,302	8,312,521
Halifax	1,260,169	1,509,327
Hamilton	1,130,128	1,295,554
St. John	874,138	1,104,234
Vancouver	1,820,675	2,293,709
Victoria	350,777	894,176
Quebec	1,255,752	1,553,175
Ottawa	2,155,850	2,606,345
London	913,390	1,076,476
Total	$54,946,579	$69,941,491

Mercantile Summary

The earnings of the Temiskaming and Northern Ontario Railway are increasing with each month, as is not to be wondered at in view of the wonderful "drawing" power just now of the Cobalt region. Gross earnings for January and February totalled $56,520, and expenditures $37,111. March figures are not yet definitely given, but the gross receipts are believed to have been double the amount of those for the first two months together, while for April the prospects are for a still more remarkable increase.

The citizens of Brandon were asked by the school board for power to borrow $80,000, half of which to be spent in building a new collegiate institute, and the remaining $40,000 on two new public school buildings. Then they were asked by the council and board of trade to pass a by-law giving a twenty-five-year street franchise and other concessions to the Great Western Power and Machinery Co., so that Brandon, when it is ready for business, will be able to supply electric power for manufacturing purposes cheaper than any city or town west of the Great Lakes. The result of the vote was as follows: For the school by-law, 630 votes for and 43 against; Power Company by-law, 639 for and 54 against. Both by-laws were therefore carried.

OUR SAINT JOHN LETTER.

The city of St. John, after spending considerable money on expert advice regarding the establishment of a civic lighting plant, has concluded a ten-year contract with the Street Railway Company to light the streets with 2,000 candle-power lights for $75 each. The opinion of the expert was that it would cost about $70 for the city to do this work, and the aldermen did not consider that there would be any actual saving. The new contract will date from the first of July. At present there are three lighting plants, one in the north end owned by the city, and one in Carleton lately acquired by the Street Railway Company and the company's central power house. Under the new arrangement all the lighting will be furnished from the one plant.

A strike of painters for an increase of 25 cents per day has been successful. Masons, carpenters, and other building trades workmen are talking of demanding shorter hours or more pay, but no move has yet been made. In Fredericton some of these trades have just secured a nine-hour day. In St. John nine hours is the general rule except for the printers who work only eight.

The outlook at the present time is not particularly good for house-building in St. John during the coming season, although a few large structures will be erected. These will include a new branch for the Bank of New Brunswick on Main Street, and a new home for the Y. M. C. A., besides extensive alterations in premises occupied by Manchester, Robertson, and Allison, Brock & Patterson, and others.

The school trustees of St. John, bowing to the popular demand have decided to enlarge the school course. They will include manual training and a commercial course, and it will be optional with pupils which they shall take. It may be that plans will also be made for domestic science, but nothing special on this point has as yet been decided.

The plan for three or four cities on the St. Croix River to join in a water system has fallen through. Calais in Maine and Milltown in New Brunswick have decided not to join in the improvement, but the town of St. Stephen will "go it alone," and by an expenditure of about $145,000 will secure a water supply that is expected to meet all the requirements for years to come.

The city of St. John has just given orders for a bond issue of $700,000. About $500 000 of this is wanted to redeem a temporary loan of the Bank of New Brunswick for different improvements, and the remainder is for expenditures for water and wharf improvements now going on. St. John will have a tax rate of about $1.98 next year and citizens are beginning to complain that the civic burden is heavy enough. There is hope of a sale to the Dominion Government of the harbor of St. John in connection with the nationalization of the port, and the money realized from this should be sufficient to wipe out a large share of the civic debt, which amounts to about $5,000,000.

The export business by the winter port steamers continues to grow. Up to the 31st of March the value of shipments was $18,765,858, an increase of $5,058,981 over the total business of last season. The expectation is that by the end of April the exports will have reached about $26,000,000 or practically double those of last winter. With another year a still greater increase should be noted, for there will be increased dock space and so more steamers can come.

On Thursday of last week Messrs. Manchester, Robertson & Allison, Limited, celebrated their fortieth year in business. From small beginnings this firm have increased their trade year by year, and are now the leading house in the Maritime Provinces in the dry goods and house-furnishing lines, and it is believed the next few years will see still further enlargements, giving them a department store that will be a rival to those in the big cities of Upper Canada.

The Enterprise Foundry Company at Sackville is to be enlarged. Plans are now being prepared by a local architect for extensive additions to the premises and when the work is completed the foundry, which is an adjunct of the stove business of Messrs. Emerson & Fisher of this city, will be able to increase their output greatly.

St. John, N. B., 14th April, 1906.

PETERBORO' UP-TO-DATE.

The city of Peterboro' is undergoing evolution in more respects than one. Municipally, industrially, and in even higher literary and social respects it has of late taken creditable strides. Having long shown a strong public spirit, its citizens continue to exhibit this in matters pertaining to civic health and safety. And very properly they have thought that the city's fire-fighting appliances must not be allowed to fall behind a normal requirement. Fifty years have elapsed since the townsfolk used to "run wid de masheen" to fires in default of an organized fire brigade—said machine being of the sort shown as one of Canada's products at the great Exhibition of 1851 in London, where 40, 50, or even 60 men (and boys) could "heave her down" by alternately pulling down and pushing up the brakes. This machine did good service at Peterboro's big fire of 1861. Next came from York State a Silsbee steam fire engine, which served the town well for thirty years. In 1905 and 6, however, something still better was deemed to be needed, and tests of two steam fire engines were made in the town: one of a machine of the Canadian Engine Co., of London, in October, and one of a Waterous Engine, capacity 1,000 gallons per minute (known as the vertical patent piston neck, with double pumps and double cylinders), last month. The results of these tests has been the purchase of the latter engine at a cost of $5,900. From the lengthy description of these tests given by the Peterboro' "Review," it appears that the London engine was out-classed by the other in time of getting up steam, in water pressure, and in volume and continuity of stream. The Brantford engine is described as possessing a patented boiler, with double heads and radial tubes, and its running gear, forged steel axles and Archibald wheels is pronounced by both firemen and aldermen to be in every way admirable. Mr. Hugh Cameron, the Toronto agent of the Waterous Engine Works Company, of Brantford, and Mr. Quinlan, one of the company's engineers, were supervisors of the test, along with appropriate officers representing the council of Peterboro' and the fire brigade thereof. The satisfaction of the municipal officers with the performance of the machine is attested by the purchase, as we have stated, of the Waterous steam fire engine. The conclusion of the "Review" is that "it pays to patronize responsible home firms, and Peterboro' has set and excellent example to other corporations in this direction," living as she does up to the motto: "Canada for the Canadians."

* * *

INDUSTRY IN CAPE BRETON.

Things are "humming" in the Cape Breton region, and a correspondent at Glace Bay says there are rumors on every hand of new industrial undertakings. There can apparently be little doubt that the coming summer will be an exceedingly busy one through the mining districts. The Dominion Coal Company is well prepared for the spring and summer coal trade. Banking has been carried on for some time, and one day last week was a record breaker in that respect. At the big mine, No. 2, no less than 7,000 tons were put into the big heap, making a total tonnage in bank on that date of 150,000 tons. Banking is also being briskly carried on at the Bridgeport mine. The old Reserve mine, is at present receiving a good deal of attention by way of improvements, with a view to an increased output. An extension is being made to the boiler house and two Babcock and Wilcox boilers are being put in. It is expected that they will be ready for service by the 1st of May. Each boiler is 250 horse-power, which will increase the power of the plant fully forty per cent., placing it at 1,800 horse-power. The compressor power has also been extended. A new one is being installed, which will bring the number up to four. These will give a capacity, we are told, of 10,000 cubic feet of air per minute. A hoisting engine of 100 horse-power has been installed on the Emery seam. In addition to the above a large carpenter shop, forge, and machine shop are in course of erection. Next year a new bankhead will be put in.

The Manufacture of Satisfaction.

SATISFACTION is the secret of successful business. It doesn't matter how large or how small your business may be, it takes satisfaction to run it—genuine satisfaction—your customers' satisfaction.

Thus every progressive retailer is in one sense a manufacturer. He is continually manufacturing satisfaction with which to carry on his business. Some retailers, like the drones in the hive, let the other fellows do the hustling. These soon lose what honey they might have had.

Now in order to manufacture anything substantial (and satisfaction certainly is substantial), it is necessary to know where to get the material at the closest price for a reliable article. That's where I come in, I supply you with the best that's made

IN FURS AND FUR GARMENTS

PAQUET Furs are manufactured from the best selected raw skins, right in my own factory, which is the largest in Canada and one of the largest in the world. I have always on hand a stock of raw skins, ready to cut at a moment's notice. I can make up special orders to please your customers' individual tastes. Could anything be more suitable for the production of good solid satisfaction? Paquet styles are "up to the minute."

Travellers are now on the road—wait for them.

J. ARTHUR PAQUET, QUEBEC.

REMARKABLE SCENES IN VANCOUVER.

That was a remarkable parade which wound its way through the streets of Vancouver on the 6th inst. Vancouver has been the scene, in its new, yet eventful history of many processions and celebrations, but the one on that day, in commemoration of its twentieth birthday, was surely the most inspiring. Forty thousand people are said to have taken part in it, and though by no means unduly strung out, it was fully a mile and a half long and took an hour and a half to pass a given point. The enthusiasm displayed by all the citizens,-from a small boy up to the grey-bearded merchant or banker was a noteworthy token of the enthusiasm for success which has made this growing Pacific city progress in the wonderful manner it has shown. Old and young, men and women, the latest aspirant to success, as well as the pioneers of the old day, were all there, side by side, shoulder by shoulder, working with true Western fervor for the "going ahead" of their beloved Vancouver. No better illustration of the primitive methods of transportation in vogue in the early eighties could be secured than that afforded by the feature which was placed at the head of the procession yesterday. It comprised a triple yoke of oxen, brought especially from a Bowen Island logging camp to take part in Vancouver's birthday celebration. The sturdy and plodding beasts were objects of great interest all along the route of the parade.

Probably no more interesting object-lesson of the great strides made in the way of transportation facilities since 1886 could be given than that afforded by the contrast of the first street car used in the city with the splendid cars now turned out from the British Columbia Electric Railway Company's shops in New Westminster. Old No. 11, the first car that ever ran on Vancouver's streets, was in the parade. The old car was manned by a bunch of old-timers in the company's service.

In contrast with this antique car and immediately following it, we are given to understand, was No. 77—the very latest of the big cars turned out of the company's shops. The new car was prettily decorated and bore a banner proclaiming it to be the product of home industry.

Floats were in the parade, indicating in a striking way the "hard times period" between 1890 and 1895—when life and commerce in the city of Vancouver were practically dead. The scenes that followed, however, showed that the "deadness" did not last long for the period which followed immediately after, between 1895 and 1900 was characterized by a burst of wonderful activity, which, indeed, has continued in even growing ratio ever since.

It may be truthfully said, says a local newspaper, which gives many other details, that the rush to the Klondike regions in the search for gold was the best thing that ever happened Vancouver. It broke the spell of depression which had settled over the city and which seemed to threaten to stay. It put vim and vigor into the business man, and increased trade in his business. It put money into circulation and started the business of the city on the high road to prosperity. It started the values of land upward, and they have been climbing ever since. It brought new business and new citizens here, and they have remained, and the city and the citizen are both ahead in the transaction. It was the making of Vancouver, and the citizens realize it full well, and every one of them thanks the day when the Klondike rush began.

The half-decade now beginning bids fair to eclipse anything done before in the history of this strenuous population. The latter at any rate intends to make it so, and where a whole people fastens its mind so intently on one object, it generally succeeds in attaining it.

⁂

—Another good word for Canadian trans-Atlantic steamers came on Monday from Montreal. The Allan turbine steamer "Virginian" has all records on western trips of Canadian mail steamers broken. She reached Moville at five on the morning of that day, after a run of six days and four hours from Halifax, two hours and 20 minutes better than the best previous record.

The Traders Bank of Canada

Notice is hereby given that it is the intention of the Traders Bank of Canada, after publication of this notice for four weeks in the "Canada Gazette" and in a newspaper published in the City of Toronto, to apply to the Treasury Board for a certificate approving of the following by-law of The Traders Bank of Canada:

At a special General Meeting of the Shareholders of the Traders Bank of Canada held at the Head Office of the Bank, in Toronto, on the 17th April, 1906, the following By-law was passed:

BY-LAW NO. 14

A BY-LAW TO INCREASE THE CAPITAL STOCK OF THE TRADERS BANK OF CANADA.

WHEREAS the capital stock of The Traders Bank of Canada is $3,000,000, divided into 30,000 shares of $100 each, the whole amount of which has been taken up;

AND WHEREAS the greatly increased business of the Traders Bank of Canada necessitates provision for a larger amount of money than is now at the command of the Bank;

AND WHEREAS the extending of the Bank's operations to Manitoba and the Western Provinces having been determined upon and premises opened, greater facilities are required on the part of the Bank for carrying on its business in these localities;

AND WHEREAS the future prospects of the Bank appear to warrant such reasonable increase of capital as will meet the present and immediate future requirements of the Bank's operations;

BE IT THEREFORE ENACTED by the shareholders of the Bank assembled at the Special Meeting held at the Head Office of the Traders Bank of Canada, the 17th day of April, 1906;

(1) THAT the capital stock of The Traders Bank of Canada be, and the same is hereby, increased by the sum of Two million dollars, divided into 20,000 shares of $100 each.

(2) When the directors so determine, and from time to time as they think fit, the said increased stock shall be allotted to the then shareholders of the Bank pro rata, and at such rate as is fixed by the directors, but no fraction of a share shall he so allotted; provided that in no case shall a rate be fixed by the directors which shall make the premium (if any) paid or payable on such stock so allotted exceed the percentage which the reserve fund of the Bank then bears to the paid-up stock thereof.

(3) Any stock allotted from time to time which is not taken up by the shareholder to whom such allotment has been made within six months of the time the notice of the allotment has been mailed to his address, or which any shareholder declines to accept, or, any shares which shall not be alloted by reason of the provision hereinbefore contained against the allotment of fractions of a share, may be offered for subscription to the public, at such time, in such manner, and on such terms as the directors may prescribe.

REGULATION OF AUTOMOBILISTS.

Wild talk about the automobile, either for or against will do but little good. The motor vehicle, no doubt, as its votaries claim, has come amongst us to stay; also, no doubt, in the end it will prove a blessing to the farmers and rural dwellers, who are its present most pronounced enemies. Something, however, will have to be done to prevent unwise motorists, the people who, as Hon. Dr. Willoughby expressed it the other day in the Ontario Legislature, have more money than brains, from carrying everything according to their own sweet wills. And this will have to be done, not only for the protection of the residents in the country who have been forced in many cases practically to abandon their own highways, but for the protection of the industry itself, which will surely suffer from the increasingly violent onslaughts of people who are being driven to adopt any measures to rid themselves of a growing nuisance. It is all very well for motorists to argue, as some have done, that statistics show fewer accidents to the general public through automobiles than through horses or bicycles. The thousandfold proportion of the two latter to motor cars makes a statistical comparison simply absurd, and such a claim is merely adding insult to injury. At the same time, some of the recently proposed legislation against automobiling, or, at least, the placing on it of such onerous restrictions as the use only of certain roads to be designated by the various municipalities seems equally beside the mark.

The proposal which would appear to possess the most palpable value is perhaps that made by Mr. Preston in reply to the motion of Mr. Sutherland in support of the second reading of his restrictive bill in the Ontario Legislature. Mr. Preston suggested that chauffeurs, or all those who drive motor vehicles, should be licensed. Such a course is calculated to develop a sense of responsibility in a class of men who very often seem wofully deficient in that quality, and at any rate it would be the means of keeping some sort of a rein on them.

It is a shame that the people who have the most right to their own roads are becoming afraid to use them and that those who do use them should so often abuse their privilege with so evident a relish for the tendency to destructiveness possessed by their machines. It is also too bad that an important and growing manufacturing industry should be hampered perhaps almost to its destruction, by the whims of a large number of its so-called friends. But what is really needed perhaps is not so much more laws but a more rigid enforcement of those already on the statute book, with some additions rendered necessary, as we have said, for the obtaining of a firmer grip on the man who does the mischief, the irresponsible chauffeur.

* * *

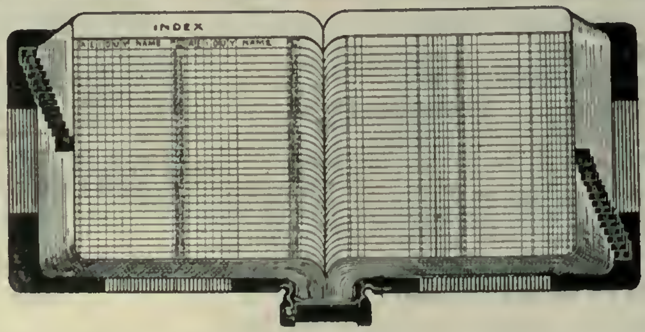
THE PELEE ISLANDERS.

It seems a pity that something cannot or at any rate is not done to bring the inhabitants of Pelee Island, that isolated little settlement off the coast of Essex county in Ontario, into closer connection with the mainland and with their natural markets. The island's soil is good and its productions in the way of fruits and vegetables very fine, while the settlers themselves, we believe, are an industrious deserving lot of people. Yet their loud and repeated cry for assistance in the shape of better communications seems to meet with no response, and their efforts to obtain some sort of a promise from the Dominion Government for speedy action are all in vain. The settlers number considerably under a thousand, so that there is scarcely sufficient inducement offering for the running of a steamboat on strictly commercial lines. From the United States there is considerable tourist traffic to and from the island in the summer, and it would seem that some arrangement might be made with the boats engaged in this service to make round trips to include Leamington, the nearest port on the Canadian side. But this is a matter that so far has not appealed successfully to the powers that be at Ottawa, though in some other cases further east of a more or less analogous character, it is claimed, aid has been forthcoming in the shape of a mail subsidy or otherwise. Meantime, the Pelee Islanders, if report is to be altogether relied on, which is probably not the case, have been talking all sorts of wild things about annexation to the Republic. It is to be hoped that some much better arrangement than that for the amelioration of their somewhat hard lot may be forthcoming.

* * *

—Some talk is heard in Montreal as to the possibility of the grain and shipping interests approaching the Government with a view to the abrogation of the coasting laws, owing to alleged high rates charged by Canadian vessel owners.

Some days ago the announcement was made by the Taylor-Forbes Company Limited, of Guelph, that they had purchased the hardware manufacturing business of H. R. Ives & Co., of Montreal. We now learn of another Montreal move of this enterprising Ontario company, namely, the appointment this week of the well-known Craig Street firm, H. McLaren & Co., to be their agents for Montreal and vicinity, with office and warehouse at 122 Craig Street, opposite Chenneville Street. Here will be found Sovereign radiators, which is the name given to the boilers and heaters of this company, lawn mowers, piano hardware, fine castings, general hardware, and heating supplies of various kinds, all of which are produced at their extensive works in Guelph. These works have been greatly enlarged of late; and no one who knows John M. Taylor and George D. Forbes, of this concern, will doubt that these wide-awake gentlemen will have furnished them with the most up-to-date appliances for turning out their goods promptly and satisfactorily.



THE CRAIN CONTINUOUS SYSTEMS

will save one-half your office labor. The Crain Continuous Ledger is the standard end-screw Binder. It was the first of this kind manufactured in Canada, and is still made on exactly the same principles. It has stood the test of years.

AN ATLAS OF WORLD'S COMMERCE.

A specimen has come to us of Part I. of the Atlas of the World's Commerce, edited by J. G. Bartholomew, F.R.G.S., and published in London by George Newnes, Limited, Strand. It deals with economic geography, the commodities of commerce, the principal travel routes. There are comprehensive statistical tables of products, imports, exports, and numerous maps, together with a commercial gazetteer of countries and seaports. We have been interested in the daintily engraved and colored maps in the specimen issue sent us (the work is quarto, published in twenty-two parts at six-pence each), the one of wheat-growing countries with those which export wheat and those which import it shown in tints corresponding to the ratio of growth in different parts. Europe, India, the Argentine, the United States, Canada, Australia; and diagrams showing the annual production of the world and of various countries of the world for a series of years, likewise its consumption and the variations in price over 120 years.

Another series of diagrams on another sheet gives the development of seventy years in the world's production of coffee, its consumption by different countries and its fluctuations in price from the highest mark in 1805 to its lowest in 1830. The great fall from the high figure of 1875 to the low one of 1885 is from about 95 to 65s. per cwt. But from the high point it reached in 1890-94, say 90 to 98s. it has fallen forty or fifty shillings per hundred weight according to the diagram by reason of over-production. The coffee map is also very interesting, showing in red and pink where the bean is grown and in different shades of blue where consumed. Where the United Kingdom consumes only 11½ ounces and Canada 16 ounces per head of the population, France and Germany consume 4¾ and 6½ pounds, the United States, Sweden and Norway between 11 and 12 pounds each, and Holland 14½ pounds per head, showing the Hollanders to be greater coffee drinkers than even the Americans. The figures of total consumption are something enormous. The letter press of this atlas is legible and the contents promise to be very instructive. To those who like buying books in parts this publication will appeal.

* * *

—The article on page 1380 of our issue of 13th April, entitled "Higher Grade of United States Consuls," should have been credited to the "Dry Goods Economist," of New York.

* * *

WESTERN BANK OF CANADA.

The twenty-fourth annual meeting of the shareholders of the Western Bank of Canada was held at the head office of the bank, Oshawa, Ont., on Wednesday, April 11, 1906.

The following shareholders were present: Messrs. John H. Cowan, Dr. McIntosh, Thos. Miller, F. W. Cowan, John McLaughlin, W. F. Cowan, T. H. McMillan, J. A. Gibson, R. S. Hamlin, R. C. Babbitt, Dr. Hoig, Thos. Paterson, W. W. Tamblyn, Richard Souch, and others.

The president occupied the chair, and Mr. T. H. McMillan acted as secretary to the meeting.

The following report was submitted:

Report.

Your directors have pleasure in submitting the twenty-fourth annual report of the bank for the year ending the 28th day of February, 1906.

The business of the bank has continued progressive and satisfactory. The net profits for the year amount to $88,575.76, (being at the rate of 16½ per cent. on the average paid-up capital of the bank), to which has been added $15,299.25, brought forward from the previous year, amounting in all, to $103,875.01, and which has been appropriated as follows, viz., $37,736.67 in payment of two half-yearly dividends at the rate of seven per cent. per annum; $50,000 carried to the credit of the rest account, (which now stands at $300,000, equal to 54½ per cent. of the paid-up capital); $16,000 to the credit of past due bills account, and the balance $137.34 to credit of profit and loss account.

The deposits have increased $295,603.34, and the gross assets $386,894.42 over the previous year.

The losses of the year have been of a normal nature.

The agencies of the bank have all been recently inspected and found to be in a satisfactory condition.

JOHN COWAN,
President.

STATEMENT OF ASSETS AND LIABILITIES ON THE 28TH DAY OF FEBRUARY, 1906.

T. H. McMILLAN,
Cashier.

It was moved by the chairman and seconded by Mr. Hamlin that the report as read be adopted, printed and circulated among the shareholders.—Carried.

Mr. Miller, seconded by Mr. Souch, moved that the thanks of the shareholders are due and are hereby tendered to the president, vice-president and directors of the bank for the manner in which they have conducted the affairs of the bank during the past year.—Carried.

Mr. W. W. Tamblyn, seconded by Mr. Miller, moved that the thanks of the shareholders be given to the cashier and other officers of the bank for their attention to the interests of the bank.—Carried.

Dr. McIntosh, seconded by Mr. Gibson, moved that this meeting do now proceed to elect by ballot seven directors to fill the place of those retiring, and that Messrs. F. W. Cowan and John McLaughlin be scrutineers for said election, and that the poll remain open for one hour to receive the votes of the shareholders, but that should five minutes elapse at any time without a vote being taken the poll shall be declared closed, and that the scrutineers be paid $4 each for their services.—Carried.

The scrutineers reported the following seven gentlemen as having received the unanimous vote of the shareholders, viz.: John Cowan, R. S. Hamlin, W. F. Cowan, Dr. McIntosh, W. F. Allen, T. Paterson and J. A. Gibson, who were duly elected directors for the ensuing year. A vote of thanks was then tendered to the chairman for his able conduct in the chair, and the meeting then adjourned.

At a subsequent meeting of the new board John Cowan was unanimously elected president, and R. S. Hamlin vice-president.

Mercantile Summary.

A sub-contract for several miles of track-laying on the Midland Railway has been awarded to W. Stewart, of Portage la Prairie, Man.

The Sarnia Match Company, Limited, has been granted a charter by the Ontario Government, authorizing it to manufacture and sell matches, box-shooks, etc., with headquarters at Sarnia. J. M. Diver and E. C. Barre, of that place, are provisional directors. The capital stock is placed at $300,000.

A company is being organized under the name of the Northwestern Brass Co., Limited, Montreal, to manufacture and deal in brass and other castings, railroad and foundry supplies, smelt and refine minerals, etc. J. T. Ostell and Peers Davidson, of Montreal, are names mentioned in connection with the new company.

The Brussels Oil Company, Limited, has acquired a charter empowering it to purchase, lease, and sell or otherwise deal in petroleum and natural gas wells, and to reduce and store them and other mineral products. David Ross, J. Ferguson and Geo. Edwards, all of the village of Brussels, Ont., are charter members. The capital is fixed at $100,000.

A despatch from Neepawa, Man., where oil was recently discovered, states that the prospects every day are becoming brighter. The drill is down nearly 300 feet, and has brought up a substance resembling axle grease, which burns readily and gives off an odor resembling coal gas. A company has been formed to continue development work.

John Miller & Son, Limited, Montreal, has been granted a Dominion charter to do business as wholesale and retail merchants, dealers, traders, manufacturers and importers of hardware, engines, motors, automobiles, electrical apparatus, bicycles, etc. John and J. E. Millen, merchants, and Wm. Strachan, all of Montreal, are members of the company, which starts out with an authorized capital of $100,000.

A. E. Williams, of Seattle, and J. B. Hart, city attorney of that place, are organizing a company with a capital of $1,500,000, largely provided in the Eastern States, for the purpose of putting up a pulp and paper mill at Bella Coola. M. F. Jacobson, the founder of the Norwegian colony at that place, is also interested. The company will commence the erection of the mill near Bella Coola as soon as the pulp lands have been surveyed and other preliminaries settled. The Norwegian colonists have entered into an agreement with the company by which all the timber on the colonists' lands is turned over to them in return for an undertaking that the colonists shall be employed at the company's works and in the woods. Eighty thousand acres of pulp lands will be surveyed, and the company places the amount of timber per acre at thirty thousand feet.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

A letter from Vancouver says that the settlers on Salt Spring, Pender and Mayne Islands desire steamship connection with Vancouver. The settlers have reached the conclusion that a good trade can be done between Vancouver and the islands provided steamship connection be secured. They have live stock and general farm and garden produce to sell.

It has been practically decided, said Hon. Mr. Emmerson to a deputation from Moncton last week, that the Intercolonial Railway shops, which were burned down recently, will be rebuilt on a fresh site within the town limits, and that they will be laid out on the model of the American Locomotive Works in Montreal. The improvements now contemplated will probably reach a value of half a million.

The Jones Underfeed Stoker Company, Limited, total capital stock $150,000, and chief place of business at Toronto, has been granted a charter by the Dominion Government. It will buy, sell and deal in mechanical stokers, engines, motors, boilers, furnaces, heaters, ventilating, heating, lighting and electrical plant, carry on business as mechanical, marine, civil, sanitary electrical engineers, etc., do a general foundry work.

The Halifax and Eastern Railway, in which the Allans, of Montreal, are interested, has a bill before the Provincial Legislature asking for incorporation. It would be constructed along the eastern shore of Nova Scotia, from Halifax to Guysboro', a distance of two hundred and twenty miles. There would also be a branch from Stellarton to Country Harbor, thus giving the Acadia Coal Company an open ocean port all the year. The company will be capitalized at two millions, and the Government will grant assistance in the form of a loan, secured by first mortgage, with interest at three and a half per cent., of twelve thousand dollars per mile.

Work is being pushed forward on the Duluth, Rainy Lake and Winnipeg Railroad, the rails being laid as far as Pelican Lake. When navigation is open at Port Arthur tons of material will be shipped into Fort Frances in bond, and a thousand men will be working at this end to meet the gang working from the south. Work on the new steel bridge will commence inside of thirty days, and by January 1st next the entire line is expected to be open for traffic. The bridge will be located at Pither's Point. The road from there to the main line of the C.N.R., as well as one-half of the bridge, is being built by Mackenzie & Mann. Terminals are to be located at Fort Frances, the present station to be used as a union station. Two trains daily will be put on between Duluth and Fort Frances, through sleepers being run to Winnipeg and Port Arthur via the C.N.R.

Mercantile Summary.

The lumbermen of British Columbia are making application to the Railway Commission at Ottawa for the removal of the recent advance in freight of 10 cents per hundredweight made by the railroads on lumber shipped from the Pacific coast to Eastern Canada. Their action will be supported by the Canadian Manufacturers' Association.

We hear from Quebec that Mr. Thomas Harling, managing director of the Quebec Transport Company, has returned from England, where he has been for the object of procuring a first-class line of freight steamers to ply between Quebec and European ports. Mr. Harling reports that he has succeeded in obtaining the necessary tonnage, and the new line of steamers will be inaugurated in May next, for the first season giving a fortnightly service.

The postmasters of Ontario have formed an organization in the hope of influencing the Government to remedy some of their grievances. They claim that the rate of remuneration granted in 1903 was not adequate to meet present-day needs. The reduction in the rates of letter postage had led to great increase in postmasters' work without corresponding increase in salary. Certain requirements are asked for regarding mail matter sent out by newspaper publishers and mail order concerns whereby the work of the postmasters may be lessened.

It is likely that a large lead works will be erected in Halifax, the prime movers in the enterprise being Brandram Bros., of London, the well-known English manufacturers of white lead, etc., and other British capitalists. Henderson and Potts, paint manufacturers, of Halifax, are also said to be interested. It is proposed to form a joint stock company, capitalized at $2,000,000. Lead-producing ore of low grade exists in several large deposits in Nova Scotia and it is expected that the establishment of the plant in Halifax will be followed by extensive development.

Activity has started up again under Walker Smith's management at the Payne mine. Work commenced a few days ago on the ore body in No. 8. Sinking has begun some distance away from the vein. A perpendicular shaft will be sunk fifty feet to one side of the vein, and from the lay of the ledge it is expected to be tapped about the distance below that the contract calls for. This vein is the richest so far discovered on the Payne ground. The cost of exploiting it was formerly considered by the company to be too heavy. The concentrator is being overhauled and will soon be in running order. The mill feed will be supplied by back fillings from some of the old stopes. There is ample water just now for all milling and mining purposes, and when the mill starts the compressor will also be in operation and cut down expense at the mine.

Mercantile Summary.

L. G. Fournier, an Ottawa furniture dealer, is reported to have arranged a compromise and will close out his business.

Formerly a pedlar, and since the spring of 1904 doing a small business on West Notre Dame Street, Montreal, in clothing, etc., Charles Waterman has assigned. His liabilities total about $2,400.—Joseph Boucher, of the same city, saloonkeeper, has assigned on demand, owing $5,308.

J. E. Paquet, general merchant at Levis, Que., recently reported as insolvent, has arranged to pay 20 per cent. on liabilities of $5,500.—Hypolite Rousseau, another insolvent general dealer, living at St. Francoise, Que., has effected a compromise at 40 cents in the dollar, cash. His liabilities reached $1,486.

An assignment has been made by A. Boucher, boot and shoe manufacturer, in Quebec. Mr. Boucher has been a shoe manufacturer all his life, and was foreman for the late Octave Migner many years prior to engaging in business for himself, about twelve years ago. His liabilities are figured at $41,800, with estimated assets of $28,500.

An offer of compromise at the rate of 40 cents on the dollar is made by F Arpin & Co., dealing in groceries and liquors at Marieville, Que. Arpin's business record has been of a somewhat unfavorable character; and he has moved about a good deal, having been in business at different times in Montreal and at Richelieu, Que. He is reported to have failed twice in the past.

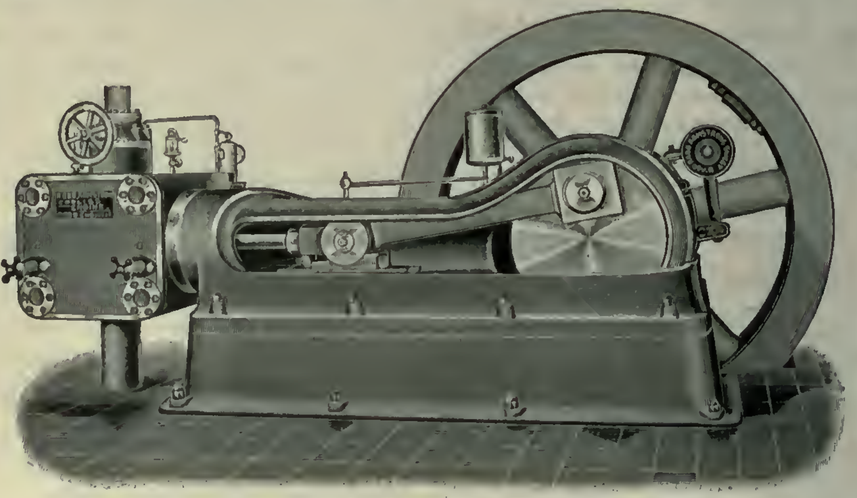
Contracts were awarded the other day by the Pembroke Electric Co. for the machinery for their new power plant on the Black River, a few miles from Pembroke. The hydraulic plant consists of two 900 horse-power units, each composed of one special 30-inch cylinder, gate Crocker turbine, operating under 120 feet head. The water wheel runners will be made of bronze, each wheel directly connected to a 500 kw. alternating current three-phase Westinghouse revolving field generator. For driving the exciters there will be provided two 15-inch turbines, each enclosed in steel case, and each developing about fifty horse-power. The hydraulic machinery is being furnished complete by the Jenckes Machine Co., Limited, of Sherbrooke, Que, the generators and exciters by the Canadian Westinghouse Co., Montreal.

We understand that the yards at Bridgeburg are being rushed to completion in order that the Canadian Shipbuilding Co. may begin work on the large freight steamer ordered for the Chicago and St. Lawrence Transportation Co. and the palace steamer for the C.P.R. for service on the upper lakes. The company has just laid the keel of a fine new boat for the Richelieu and Ontario Navigation Co., to run between Prescott and Montreal. A new car ferry also is being constructed for the Grand Trunk Railway to carry twenty-eight loaded railway cars from Charlotte, N.Y., to Port Hope.

The British Columbia Pine Timber Co., of Vancouver, will start work at once on its new saw-mill at Kaien Island, it having secured a contract to supply 500,000 railroad ties to the Grand Trunk Pacific. The machinery for the saw-mill plant has already been ordered and will be forwarded to Kaien Island as it arrives in Vancouver. An immense amount of timber will be required to fill this tie contract. It is declared that in each tie there will be thirty-three feet of timber, so that in the half million ties there will be 16,500,000 feet of timber, not to mention the thousands of feet which will be cut as waste in reducing the ties to size. The company have a number of good timber limits at various points along the coast in the vicinity of Kaien Island. Logging operations will be commenced at an early date. The contract secured is sufficient for two hundred miles of railway, and the ties are to be delivered at Prince Rupert, the Grand Trunk Pacific coast terminus, wherever that may be, presumably Kaien Island.

Toronto people often criticize Montreal without having more than the faintest knowledge of the varied interests of that place. It is, therefore, not unfair that Torontonians should sometimes hear the opinions formed of them by residents of the older and greater city. The Montreal "Gazette" has had many a clever fling at Toronto and the Province of Ontario for our precocious smartness in commerce and politics and for our great professions in religion and morals. Here is one from its edition of Tuesday last: "Toronto aldermen and newspapers are discussing a plan for spending $5,000 on getting publicity for their city. There are people who do not seem to know when they have enough of a thing. Toronto has street car worries, a bay full of sewage, public ownership fever, the Ontario Legislature, the Queen's Park orators, the "Telegram," the labor agitator, the secret society, $300 a year aldermen, the Yonge Street bridge that isn't built, the plumbers' combine, Mulock's old postal automobiles, a union station problem, the bursted York Loan combination, and more dead mining company certificates than any place of its size in America. It does not need publicity. It has notoriety."

NOT ONE CENT FOR REPAIRS



An experienced engineer has written us as follows: "After eighteen months of hard service, the 'Robb' engines are in excellent shape, running very smooth and without a bit of vibration. Up to this time, they have not cost one cent for repairs, the only expense being steam, oil, and packing, and this below the average. Perfect alignment, parts well machined and good design make the 'Robb' the most economical and labour saving engine that has ever come to my notice."

CANADIAN TRADE IN AUSTRALIA.

Mr. D. H. Ross, the Canadian trade agent in Melbourne, has an interesting letter in a recent report issued by the Department of Trade and Commerce respecting what Canadian firms have been doing latterly in Australia, and as to what chances present themselves for trade in certain other lines.

Several motor cars of Canadian make were on the water, he said, destined to Australian ports, and owing to genial climatic conditions there is a constant demand for such as are reliable in make and adapted to the country. In Melbourne there is an ice skating rink, we are told, which recently placed a fair-sized order for skates with a Canadian firm, though wholesale prices were not available on a basis for fair comparison with other makes, mostly American.

British Columbia lumber mills are said to be losing their hold on the Australian trade through high prices. One instance is given by Mr. Ross where an order for a cargo of over 1,000,000 feet of pine was placed with a Puget Sound mill which charged nearly 10 per cent. less than Canadian rivals. The difference, however, may be largely accounted for by higher rates for freight.

It is worth noting that the Government of one of the States is calling for tenders to supply large quantities of wire netting for rabbit fencing. Such netting, which must not be confused with wire fencing, is free of duty. There are several wire netting factories in the Commonwealth, but the demand is very large, and they have to import the raw material.

Despite persistent efforts which have been made to introduce Canadian screen doors, this agent says the result has been disappointing. The quality of the "made in Canada" goods is much superior to what the market has been accustomed to receive from the United States; hence the volume of trade is limited owing to relatively higher prices. Manufacturers, he suggests, might with advantage turn their attention to a cheaper line of goods, besides securing the lowest inland transportation and marine freights on these bulky lines.

The agents for a line of Hamilton shoe polish report a rapid increase of business, as in Melbourne and suburbs alone the goods are being stocked by over seventy retail stores. Orders for Canadian corundum wheels, roll top desks, refrigerators and machinery—of various kinds—have recently gone forward to manufacturers. Some metal working and tinsmiths' machinery has been ordered from a Hamilton company. Canadian samples of aluminum goods are now being tested in Melbourne, and, if proved of satisfactory quality, very considerable orders will result. Specifications of a large number of ploughs, to be built to Australian standards, have gone forward to a Canadian company. The Melbourne market is bare of stocks of Canadian jar cheese, and supplies are anxiously looked for. Altogether, therefore, the prospects for Canadian trade development in Australia are fairly bright.

UNITED STATES FINANCE.

Henry Clews & Co., New York, in their weekly circular, under date of April 14, 1906, say:

On Wednesday the announcement was made that over $6,000,000 of gold had been engaged in London for this market, the result being an immediate drop in money rates and a corresponding improvement in security values. This development in connection with the fact that funds will soon be returning from the interior more freely imparted a more confident feeling regarding monetary prospects. The latter outlook, however, is still one requiring close attention. In spite of the large increase in our currency supply we have been turning floating capital into fixed forms too rapidly. The nation's savings are being too quickly exhausted. Large sums are locked up in speculation, particularly in real estate; and legitimate demands continue very heavy, owing to the immense volume of business and the high prices of commodities. Of course, only a small portion of the business of the country is done through an actual transfer of money—probably not more than 10 per cent.—the balance of the nation's transactions being effected through a mere transfer of credits by checks. Nevertheless, our currency supplies have been pretty thoroughly exhausted, and bank reserves are at a remarkably low ebb. There are three ways of replenishing the latter. First, by the return movement from the interior; second, by gold imports, and third, by liquidation. The latter is the most unwelcome, and yet the inevitable if the other two sources fail. Unfortunately, recent stringency arising from perfectly natural causes was aggravated by the inelasticity of our currency system; so efforts again appear to be under way directing the attention of Congress to the careless neglect which this problem has received for many years past. In all probability we shall get no serious reform until the nation comes face to face with a serious financial crisis. Our neighbor, Canada, which in many respects is working under similar conditions as ourselves, makes no complaint of monetary stringency, for Canada possesses a model banking system and an elastic currency; consequently her business men go on their prosperous way unfettered by monetary considerations, while we blunder along, refusing to learn except by bitter experience. Apparently the present crisis in the money market has been passed, and easier conditions may now be anticipated until the demands of the next harvest begin to make themselves felt. How much further relief we may be able to secure from Europe is somewhat problematical. Apart from the monetary situation the home outlook is satisfactory. No interruption has yet occurred in the large volume of business in progress, and none is in sight. The great coal strike, which has seriously threatened disaster, it is hoped will be adjusted before very long. In consequence various industries dependent thereon have taken a fresh start. Numerous orders for iron and steel, held back on account of the coal strike, have been placed; and that important industry is once more enjoying the high tide of activity.

Railroad legislation now attracts little attention on the Stock Exchange, since it is quite apparent that nothing radical or unjust to the railroads is likely to pass at this session. All outside conditions, therefore, favor the stock market. The only threatening feature comes from the money situation. Conflicting conditions favor a good trading market, for, while prosperity continues, there is little chance of a serious decline at present. On the other hand, while money continues so scarce there is no opportunity for any excessive bull movement. We may expect frequent rallies, based on encouraging outside conditions and the fact that large holders are interested in higher prices. Our advice, however, would be to take profits when the market is strongest and reinvest only on the pronounced declines, which are likely to be more and more frequent as the season progresses. In all directions prices are exceedingly high—too high for permanency, and moderate recessions in both commodities and securities would be desirable and wholesome.

* * *

TORONTO MARKETS.

Toronto, April 19, 1906.

Chemicals, Drugs, etc.—The condition of trade under this heading remains unchanged, the movement being just about normal for this time of the year. Opium, quinine and the other staples present but few features of interest, and, in fact, the market in these lines is distinctly on the dull side. Carbolic acid and menthol are similarly situated. Baltimore advices speak of a heavy demand for chemicals for fertilizers. From England comes the report that the home trade is improving and that for foreign requirements showing a tendency to expand.

Dry Goods.—The great firmness in wool, cotton and linen staples continues to the full, and the demand does not seem now to suffer in consequence. Trade has been very active all through the Easter period, and that in millinery and new dress goods of a light character has been very brisk. Travellers in the country districts, not only in Ontario, but in Manitoba and the new Provinces, speak of the prospects for the season's trade as being of a flattering character. The people are prosperous, and are buying largely, the idea of lower prices to come having by now exhausted itself apparently. There is no reason, so far as the ordinary observer can judge, why the present satisfactory state of things should not continue for a long time.

Flour and Grain.—A better state of things has set in in the flour trade, and more business is being done. The price for ninety per cent. patents actually given this week is usually $3.10 in buyers' bags. Bran has again gone up, and shorts is a little higher in its outside quotation. For grains, too, the enquiry is better than it was. Wheat is a cent higner for most grades. Oats is a cent higher. Others are practically the same.

Hides and Leather.—There is a good movement at the recently revised prices. Leather is rather firmer, though price quotations remain as before.

Hardware.—There is a rush of business in readiness for the renewed movement by water and owing to reduced freight rates. Prices are good and steady, and a heavy season's trading is anticipated. In metals there have been several movements in an upward direction. Pig iron is very firm, in sympathy with the strong demand. Many orders have been placed abroad. Antimony is scarce. Copper is still strong. Galvanized iron has gone up. No change has been announced in lead, though an advance is looked for by some.

Live Stock.—The run of cattle offered at the Toronto and Junction markets this week was light, but the demand active, so that everything sold out pretty early. Quotations stood steady, however, though there were a few fractional increases made in certain lines. This applies more especially to butchers' animals, as those for export met with only an average need. There is a moderate call for stockers and feeders; for choice feeders the demand is good. Easiness developed in the sheep and lamb branch. Live hogs have declined 10c. per cwt.

Provisions.—Supplies from the country are larger and butter is easier in consequence. Cheese is very firm. Eggs are falling, owing to the heavier offerings. Poultry is dull, dressed spring chickens getting 13c.

* * *

A meeting of the creditors of Francois O. Schryburt, of Quebec, doing business as a boot and shoe manufacturer under the style of F. Schryburt & Co., was held last week. His liabilities aggregate $54,500, and a compromise arrangement has been agreed to on the following basis: 25 cents in the dollar in cash, 5 cents in November, 1906, yearly payments of 8 cents up to 1911 and 10 cents in 1912, making 80 cents in all. Schryburt transfers endowment policies aggregating $35,000 as security for this somewhat peculiar settlement.

Every promise made, and every estimate of profit given by the Great-West Life has been fulfilled.
(Vide Annual Report for 1905.)

The Policies of the Great-West Life bear the closest scrutiny. The more carefully they are examined, the more clearly apparent is their liberality and value.

MONTREAL MARKETS.

Montreal, 18th April, 1906.

Ashes.—Considering the near approach of the opening of navigation, the enquiry from Britain, which generally shows some revival at this season, is unusually light. The stock in store amounts at date to only about sixty barrels, where, in the palmy days of old, it used to run up into the thousands. We quote: First pots at $5.17½ to $5.20; seconds, $4.65 to $4.70; pearls, $7 to $7.25 per cental.

Cements and Firebricks.—Trade is now quite brisk in cement, and, among other good business, a Government order for 7,000 barrels is reported. Belgian makes are quoted all the way from $1.75 to $2; English, $2 to $2.10; Canadian, $1.80 to $2. Firebricks, $18 to $23 per thousand.

Dry Goods.—The brighter and more favorable weather prevailing of late has gladdened the heart of the city retailer of dry goods, and general sorting business is of a fairly active character. Values in all lines of textiles are very strong. Of the new fashionable long lengths of kid gloves there is an absolute famine, American buyers having come into the market and bought up every available dozen at fancy prices.

Dairy Products.—With the advancing season and the increasing make cheese values are easing off. Colored is quoted locally at 12½c. per pound, and white at 12c. Butter is also lower in price, owing to freer receipts, and stocks of held creamery are somewhat difficult to move. For fine makes of new creamery 23c. is about the outside figure; finest held creamery is now quoted at 20 to 20½c., with under-grades down to 18 to 19c. Dairy makes are quoted at from 15 to 17½c., as to quality.

Groceries.—Country roads are re-reported in bad shape, the frost having penetrated the ground much deeper than usual, owing to the lightness of the snowfall during the winter, and wholesale merchants report that the demand could well be better. As regards values, the only important feature of the week is a decline in sugars of 10c. a cental, bringing the present factory price to $4.10 for standard granulated, with yellow ranging from $3.70 to $4. The jobbing figure for Barbadoes molasses is still 30c. per gallon, in single puncheons, and will so remain until May 15th, when the figure will be 28c. Rolled oats are advanced 15c. a bag. In other lines there are no changes of any kind.

Hides.—Receipts of new lambskins are now fairly liberal, but the quotation is likely to remain at 10c. each until May. Calfskins are quoted at 13c. per pound for No. 1, and 11c. for No. 2. In beef hides there is nothing new, and dealers continue to buy on the basis of 11c. for No. 1. The supply is quite equal to the demand.

Leather.—Black leathers continue to advance in price, and Western makers of splits have put up quotations a full cent in addition to the advance of several weeks ago, while there is said to be practically no stock held by Quebec tanners. An English buyer, now in this city looking for stock, states that he was asked as high as 30 cents in Boston. Locally, the present quotation is 27 to 28c. Sole leather is very firm at former figures.

Metals and Hardware.—Ingot tin has made a further upward jump, and has reached the highest point for years, being now quoted at 42 to 42½c. in a jobbing way. Antimony is also soaring skyward, being this week cabled from London at £95, a figure which is equal to a spot jobbing price of 22 to 22½c., but there is really no stock here, and Cooksons will not undertake to make delivery before June. Copper is very firm at 20½ to 21c.; lead, $4.35 to $4.45; zinc, 7c. Iron values show little variation, best brands of Scotch pig being quoted for spring delivery, ex-wharf, at $21.25 to $21.50, and No. 3 Middlesboro' at $17.75 to $18. Bars are steady at $2 to $2.05. Galvanized sheets are firm at $4.20 to $4.45, the lately advanced figures, and galvanized Canadas at $4.10 for fifty-twos and $4.45 for sixties. All other kinds of sheets remain as quoted last week.

Oils and Paints.—Though the rush of spring shipments is now over, travellers on the road are still reported as sending in good orders. Linseed oil is showing some strength abroad, and local quotations are firmer at 54c. for raw, and 57c. for boiled, in an ordinary jobbing way. Turpentine is about steady at 95c. per gallon, in single barrels. White lead is quoted firm at $6 to $6.15 for pure, and putty at $1.40 in bulk. Window glass is firm at $4 per 100 feet for first break, with no superfluous stock.

TEXTILE NEWS.

An effort to arrive at a clear view of the probabilities as to the acreage of new cotton in the South is made by the "Manufacturers' Record," of Baltimore. Briefly summarized, the replies indicate a tendency toward a slight increase in acreage for the cotton belt as a whole, though this increase is not expected to overcome the decrease of 1905 from the acreage of 1904. The replies show steady advances in diversification of crops, a firmer purpose than ever on the part of bankers and farmers to stand together for the common good, and a greater degree of comfort among the growers. While reduction of acreage is promised in a number of localities, new lands, both in the newer and older States, are being opened up and planted in cotton. In the main, however, the bankers are not encouraging any great expansion, and there is no strong indication of an acreage largely in excess of that of last year.

The paucity of supplies of raw silk is a matter which comes in for discussion in the pages of the New York "Dry Goods Economist." It is having the most effect of any condition on raw silk prices. Demand from manufacturers does not warrant any such firmness as exists at present for the majority are running a considerable proportion of their looms without orders. The statistical position is, therefore, practically responsible for the entire situation, and it would seem as though there will be no relief in the immediate future.

A correspondent in Nottingham of the "Drapers' Record" says that a large trade is being done. Very satisfactory orders are in hand from the home and foreign markets. Amongst the latter, the States, Canada, and Australia are largely in evidence. The great demand is chiefly for Valenciennes and such laces. In addition to Valenciennes, insertions and edgings, there is a very fair demand for the cheaper kind of cotton laces, Point de Paris, Maltese laces, warp laces, double edged, are also in fair request. Nets, both for home use and for Plauen, are in very fair demand, orders being still well ahead. There is quite a big lot of cotton nets also shipped to the States, where they are largely used in the manufacture of net curtains.

The improvement in the Belfast linen market has been fully maintained. Fresh business will account for the production, and the trend of values keeps steadily upwards. Export business is satisfactory. Advices, and orders from the United States are of a promising character, and the demand for dress goods is expected to be of an exceptional character. The South American markets are doing more, and there is a further expansion with Canada and Australasia, and a quiet improvement in continental demand.

Advices from Manchester say that the month of March in the home trade houses has, on the whole, been distinctly

satisfactory as regards the output of goods, and the orders received have also been on a larger scale than in previous years. It is understood that in the departments dealing with cotton goods of various descriptions, the turnover has been decidedly better than for the same month of any year for a long time back. Reports, however, from the country are not so satisfactory. Buyers for the wholesale houses have been purchasing rather more freely during the past week in T-cloths and Mexicans. Makers of goods suitable for home consumption report a steady trade from week to week, and buyers have still difficulty in getting adequate supplies.

A report from Bradford, Yorks, speaks as follows regarding the position of wool: The basis of values for all classes of colonial and home-grown wools is now fully established on the basis of the highest rate at the recent London colonial sales, and holders of both the merino and crossbred Australian sorts are so confident that present rates will be at least maintained for some time to come that they are not in any way forcing their holdings on to the market, but are quite content to await the issue of events. There is more business being done in fine worsted coatings, in fine woolens, and also in fine cloth dress goods. The increased consumption on these various accounts is quite sufficient to keep down any accumulations of merino, and consequently values still tend to harden. The coarser-fibred sorts of the crossbred order are still quoted as very firm on a basis of the highest point reached during the March London colonial wool sales, and, although prices are already nearly three times what they were in 1902, there is a growing feeling that still higher rates may be reached for what used to be termed the cheaper kinds of crossbreds.

❧ ❧ ❧

IRON AND STEEL MARKETS.

The coal strike is disappearing as a momentous influence in the metal markets, says "Iron and Machinery World." Some of the anthracite furnaces in the east have had to bank because of fuel scarcity, but coke is abundant, the mining of coal has been resumed fully in the Pittsburgh district, and there are indications of the mines soon starting up in other fields. Navigation has opened between Lake Michigan and the lower lakes. Next week communication with Lake Superior will probably be established. As it now looks, the iron ore industry will be limited only by the ability of the miners and carriers to get the ore out of the ground and transported to the furnaces of the consumers. This means another record-breaking year, with trade on the lakes steaming at full pressure all the season. The production of pig iron in March surpassed all previous monthly records, and there are no indications of restriction, save as temporary labor troubles may prove obstructive. The tendency is still towards a heavier output of iron, the present pig iron supply proving inadequate to the needs of the steel makers.

Quite a little new interest has appeared in the pig iron market. There have been closed several good sized lots in the Pittsbugh district, and the worst by way of prices there seems to be known, the latest development being a slight firming up in quotations from the levels wrought by the big offers. The south likewise reports a splendid buying coupled with confirmation of last week's report that prominent makers have made a stand at $14, Birmingham. On the Atlantic seaboard there is better enquiry, though melters generally are not quite satisfied that the time has fully arrived to complete purchases for future requirements.

Concerning the markets for iron and steel products, there is ground only for optimism. The railroads are the big factors, just as they almost always are. Extensions of electric railroads are active in all parts of the country, and the tonnage of steel used therein is large. There are moreover constant outcroppings of additional rail and steel needs among the steam railroad systems. Heavy bridge work is active, and there is no end to the construction of equipment.

DEBENTURES
FOR SALE.

Sealed tenders marked "Tender for Debentures" will be received by the undersigned up to 5 o'clock p. m. on Friday May 18th next, for the purchase of $132,410.26 of City of London four per cent. Local Improvement Debentures.

Forms of tender giving full particulars of the debentures can be secured on application to City Treasurer.

The highest or any tender not necessarily accepted.

FROZEN MEAT TRADE IN BRITAIN.

One of the commercial agents of the Dominion in England points out that Great Britain still absorbs 85 per cent. of the world's total output in chilled and frozen meat. The shipments of chilled or frozen meat to Germany will now be impossible as apparently the Government is predominated by the agrarian party, who, far from listening to the popular clamor for cheaper meat, have framed new laws, which came into force on March 1st, raising the import duties by nearly 50 per cent. Hitherto, the rate on imported meat has been about 10s. per cwt., now it is 17s. 6d. on meat from the most favored nations (including Great Britain and her colonies, except Canada and New Zealand), and the tariff, as against the United States, Canada and New Zealand, is 25s. per cwt. on meat imported from these countries. The effect of the increase in this industry has been to lower the price of beef and mutton very considerably in the big industrial centres, and in England it is nothing unusual to buy chilled beef and mutton in Leeds at from 4½d. and 5d. per lb., and lamb at 7d. per lb., whilst the price for English beef is from 10d. to 1s. 2d. per lb.

It seems that if Canada is going to benefit by this trade, that she must at once seriously enter into the competition, otherwise, in a few years the trade will be entirely monopolized by the British companies trading with the Argentine. Especially is this phase of the case worth serious consideration at the present, in view of the strenuous opposition to the removal of the embargo on Canadian cattle, and from present appearances it would appear that the Act in the future will remain as it is at present.

❧ ❧ ❧

—Cotton linings have, as anticipated, been advanced about 5 to 10 per cent. in price. The demand continues more than usually brisk, the new processes which have been recently invented giving these materials such a high finish as to be used largely in place of others more expensive.

Offices—Queen City Chambers, Toronto
SCOTT & WALMSLEY,
ESTABLISHED 1858.
Managers and Underwriters.

The London and Port Stanley Railway Board have decided to instruct the Lake Erie and Detroit River Railway Company to repair the road at a cost of $75,000 or forfeit their lease.

We hear from Montreal of a new American and Canadian grain firm. Messrs. Harris, Scotten Co., of Chicago, who have been for the past two seasons the largest grain exporters through the port of Montreal (nearly 6,000,000 bushels in the season of 1905), are retiring from business, and the new firm of Norris & Company will continue this grain export business. The firm of Norris & Company is composed of James Norris, of Chicago (who was a stockholder and manager of the export department of Richardson & Co. (incorporated), afterwards Harris, Scotten Co.); M. Mecklenberg, of Chicago; Jas. S. Norris, of Montreal, and Hugh N. Baird, of Winnipeg, with head office in Chicago and branches at Winnipeg and Montreal.

The Crown Life Insurance Company
Head Office: Toronto, Canada.
Offers These Advantages to Insurers:
Lower Premium Rates than those charged by most other Companies.
Policies Indisputable from Date of Issue.
Loan Values Guaranteed after Two Years.
Cash Surrender and Paid-up Values Guaranteed after Three Years.
No Restrictions as to Residence, Travel or Occupation.
Policies Reinstatable at any time after lapse.
COL. THE HON. D. TISDALE, P. C., K.C., M. P., President.
CHARLES HUGHES, A. A. S., Managing Director and Actuary.
A. H. SELWYN MARKS, Secy. and Treasurer.
WILLIAM WALLACE, Supt. of Agencies.

"ACCURATE NEWS."

Naturally one cannot expect the average reader to be familiar with the details of newspaper work, but we may be pardoned if we express the wish that the practical side of our work were more fully understood. For instance, it is no uncommon thing in the case of a good-class newspaper for a member of the staff to devote two or three whole days to investigating a rumor which ultimately proves to be without foundation. Probably the only visible result of the journalist's work in the following issue is a three-line paragraph in which the report is denied, or, more likely still, the matter is not even mentioned. Usually the publication of startling reports, which on being ventilated shrivel up like new-mown grass in the hot sunshine, is not evidence of journalistic enterprise at all, but of negligence in verifying news. We can forgive a good deal in a daily paper, where the interval between the receipt of news and the time for its publication or rejection is short, but there is less excuse for a weekly paper, and less still for a monthly magazine.—Commercial Intelligence.

Mercantile Summary.

Navigation of the Great Lakes has begun. We do not refer now so much to Lake Erie, on the south shore of which steamers have been plying for weeks, but on Lakes Huron and Ontario. On Monday last the steamer "City of Montreal" cleared from Toronto for Port Arthur and Fort William to load freight for Toronto and Montreal. She was the first of the local freight fleet to leave the harbor this season. The remaining steamers of the Merchants' Line fleet, which wintered here, will clear for the upper lakes about the end of the month. The propeller "Business" will clear for the coal chutes at Oswego this week or next to load coal for Lake Ontario north shore ports.

We hear from Montreal that the Lake of the Woods Milling Company intend to build a large oatmeal elevator at Portage la Prairie. Though they have hitherto been large buyers of oats, they have not milled any. Owing to greatly increased capacity, resulting from the acquisition of the Keewatin mill and the erection of the new mill at Portage la Prairie, an enlargement of the wheat-receiving department of the system will be necessary, and the company have decided to extend the chain of elevators in the west. It is probable that at least thirty new elevators will be constructed at the most important points in the Western wheat belt. These will all be completed, according to present intention, by the time the marketing of the new crop begins.

The Metropolitan Life Insurance Co.
(INCORPORATED BY THE STATE OF NEW YORK)
The Company OF the People, BY the People, FOR the People

ASSETS, $151,663,477.29

Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec, Ottawa.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395	per day in number of Claims Paid.
6,972	per day in number of Policies Issued.
$1,502,484.00	per day in New Insurance Written.
$123,788.29	per day in Payments to Policy-holders and addition to Reserve.
$77,275.94	Per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave., New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $3,0000,00.00.

More Than $7,000,000.

Over and above premiums received, more than $7,000,000 has already been paid or credited to its policyholders by the

A Policy-Holder's Company

The North American Life Assurance Company has a Guarantee Fund of $300,000, of which $60,000 is paid up in cash. Interest is allowed on this paid up portion only. Policyholders thus obtain **additional security of $300,000** and what is of greater importance, are **assured of careful and conservative management** as the Guarantors are liable for this amount. By the Company's Act of Incorporation, every holder of a participating policy in the Company, upon which all premiums due have been paid, shall have one vote in person for each $1,000 of insurance held by him. Policyholders are thus given a **voice in the management** of the Company's affairs. In short, it may be said that the North American Life is neither a Mutual nor a Stock Company yet **possesses the advantages of both.**

WHOLESALERS AND THE LAW RE COMBINATION.

The views of wholesale men, on that subject which affects them so closely, the law against all forms and manners of combination were clearly expressed by a deputation which waited upon Sir Wilfrid Laurier and Hon. Mr. Fitzpatrick at Ottawa last week. The chief speakers were Messrs. Hugh Blain, of Toronto and H. M. Kittson, of Hamilton, for the grocers; D. W. Bole, M.P., of Winnipeg, for the druggists; and E. M. Trowern, of Toronto, for the Canadian Retailers' Association. The memorial presented to the Government set forth that the grocery trade, in its retail as in its wholesale branches, is one of the great staple businesses of the country, the capital invested in it being very large, and the goods dealt in forming for the most part an economic necessity to the consumer, and some of them yielding an extremely small profit, e.g., sugar and tobacco. The wholesale and retail branches are closely interdependent. Perhaps severe and even undue competition has borne more heavily upon the grocery business than on any other, for the self-evident reason that the goods handled by them are mainly staples and necessaries, the value of which was easily ascertainable by the public. To aggravate this competition, it is alleged that departmental stores have exploited the grocery business by advertising and selling at cost and less than cost prices in order to promote the sale of other lines upon which they could make more profit. To meet these conditions and the competition of trade pirates who live by failure and who sell goods without reference to the fact that they should be paid for, it has been found necessary in self-preservation for the trade to make selling arrangements among themselves, to endeavor, where possible, to have uniform selling prices with regard to proprietary articles. It has been found necessary to systematize the selling of goods with certain restrictions as to price. It has been found necessary also to make an effort to induce manufacturers to grant a differential in price between the price at which they sell to the wholesale merchant and to the retail merchant.

In other words, the wholesalers have found it expedient to take collective action. Suffering from wasteful competition, they have come to an agreement in the effort to remedy the evil. But this is where apparently they fall foul of the law. Section 520 of the Criminal Code says that everyone who conspires, combines, agrees, or arranges with any other person to unduly prevent, limit, or lessen the manufacture or production, or enhance the price of any article, is guilty of an indictable offence, and liable to a penalty of $4,000, or to two years' imprisonment.

Under the circumstances, the wholesale grocers, who, it may be said, as a body of business men have not their superiors in integrity and law-abiding instincts in the Dominion, feel that they are badly treated. Other business men, railway companies, telegraph companies, insurance companies, fix their rates by collective action; and, they ask, why should not they? Physicians and lawyers are not interfered with; why, they question, should merchants and manufacturers be?

Much of the trouble seems to hinge upon the word "unduly" in the clause of the Act respecting combinations. Formerly it read "unlawfully;" and one suggestion made by the deputation was that the latter should be reinstated, the word "unduly" being too liable to be taken advantage of by over-zealous exponents of the law. They also ask that the law in general be made clearer, so that there would not be the constant uncertainty such as prevails now, as to what is legal and what open to objection.

* * *

WINNIPEG AS A MANUFACTURING CITY.

Whatever else the enterprising city of Winnipeg may be, it has not yet reached the title of a great manufacturing centre. And this is what is beginning seriously to concern its people. To sit at the gateway and exact toll on the food and clothing and other articles needed by the thousands of old and new comers into the golden West, is something to be proud of; but it is not enough. Winnipeg aspires to be a producer as well as a middleman. And what is more, she means to be it. The permanent population that comes to any city with vast manufacturing interests is a factor not to be despised, and Winnipeg intends to have it. And no great difficulty, it seems, should present itself in obtaining the first requisite for putting such a desire into execution, namely, the finding of a source of cheap power.

On the north-east of the city are the Winnipeg River and Lac du Bonnet power privileges, situate much more accessibly to Winnipeg than are the Niagara Falls to Toronto and other Ontario cities. One transmission line is already completed to the city limits, and others are being constructed, so that it looks as if there will be enough competition of a healthy sort to assure to Winnipeg plenty of electric power at moderate rates. We understand also that the city proposes to establish a plant which will do much to have a regulating influence in this regard. This is a very necessary item in connection with the birth of great manufacturing industries in Winnipeg. The city has great advantages in its geographical location, but in order to induce manufacturers to locate within its precincts, it will have to be shown that they can obtain that prime requisite, motive power at a figure which will permit them to compete with long-established eastern concerns.

Winnipeg is already a great distributing point for central or western Canada; its promise for becoming a great manufacturing centre in the not very far distant future would appear to be by no means a poor one. Remarkable as has been its growth in the short space of thirty years it is bound, as the development of Western Canada goes on, to increase enormously in size and wealth.

* * *

THE SAN FRANCISCO DISASTER.

For days past estimates have been made by various American newspapers, guesses would be the better word, of the insurance loss in the San Francisco catastrophe. But these guesses have altered day by day, upward or downward, just as the statements of the number of persons killed have altered from thousands to hundreds. The fact is that it is impossible to give actual figures in the one case or in the other. Underwriting records in city offices are destroyed, or perhaps rest in vaults, among smoking ruins. Days, if not weeks, must yet pass before the insurance liability of companies can be ascertained.

Some Canadian newspapers have busied themselves in publishing guesses as to the liability of the two Canadian companies, the Western and the British America, and these guesses have been extremely wild ones, putting their liability at several times what it is at all likely to be. Such disturbing estimates are neither wise nor necessary. No company is able as yet to tell exactly what it is liable for. The San Francisco office of the Western is destroyed, and even the head office records at Toronto cannot show what properties are to be paid for, since it cannot be learned yet what houses are wrecked or burned. People from outside are refused access to the devastated city. Two officers have been despatched by the Canadian companies to San Francisco, who hope to be admitted next week. When they report we shall expect definite information either in whole or in part, which will promptly be given to our readers. Meanwhile the public may consider that these offices, which have come through great vicissitudes in the last sixty or seventy years, will manfully pay what they owe, as they have been accustomed to do.

We observe, by the way, that British newspapers, or perhaps the cable agents, are also indulging in "preliminary guesses" at the liability of British companies, and somebody has figured out £13,000,000 as the total. This morning's cable makes it only £7,000,000. "The Times'" city article gives it to be understood that no generosity can be indulged in by the insurance companies, because the directors "have no power to pay claims ruled out by the wording of their contracts, or by Californian law." American insurance men have done some guessing, too, their guesses ranging from $125,000,000 down to $65,000,000 insurance loss.

As was to be expected from the appalling nature of the San Francisco disaster all sorts of stocks in the United States made marked recessions in values last week, and the effect has not yet worn off. In the Toronto and Montreal markets, also the same feeling was reflected, although not to a very noticeable extent. Naturally the stocks most affected in Wall Street were those of railroad and other interests having wide western ramifications. The losses which ensue from such a catastrophe are absolute. That is to say, they do not accrue to one man or one community to another's gain, but represent values which have passed completely out of existence. The fact, however, that, in the intricate modern system of commerce and finance, these losses are spread over a practically world-wide area, while it makes their effects appeal to the whole of humanity, makes their result on the one community directly affected, less crushing than otherwise it would be. To make good the sudden removal of such an enormous mass of wealth, however, while it entails the passage of capital from present employments, and thus has a disturbing influence on many branches of financial and industrial activity, generally brings about a fresh impetus in the forces of production, so that this will generally balance a part of the destroyed values. For instance, it is stated that the requirements of San Francisco during the next two or three years in the shape of structural steel will be at least 250,000 tons, and this will surely make the demand for that commodity extraordinarily brisk for a long time to come. At the same time, many of the United States factories were already more than "full up" with orders, so that the benefits from this state of things are not likely to be so large as they would have been under other conditions.

It seems likely that a very large portion of the stricken city will be rebuilt, and that a large proportion of the new structures will be of steel, this material having, according to all reports, stood the stress of earthquake and fire better than any other. This, it will be remembered, was also the experience of Baltimore. A telegram from San Francisco, dated 22nd inst., states that many of the most substantial business men and property owners were already in consultation with architects, and preparing plans for rebuilding. It also says that practically every bank in the city will be rebuilt. Prosperity had marked the trade and commerce of the city for a long time past, and most of the local banking institutions had large deposits to their credit in New York and European capitals. This money, of course, will be available at once.

FINANCIAL REVIEW.

We present below a condensation of the monthly statement of Canadian banks for March, 1906. It is compared with the Bank Statement for the previous month, and shows capital, reserve, assets and liabilities, and average holdings of specie, Dominion notes, etc.

Canadian Bank Statement.

LIABILITIES.	Mar. 1906.	Feb. 1906.
Capital authorized	$105,146,666	$102,869,666
Capital paid up	87,304,198	85,958,202
Reserve Funds	61,254.560	60,188 472
Notes in circulation	$65,991,818	$62,434.893

Deposits to secure note circulation	3.435.334	3,435.334
Notes of and cheques on other banks	20,732,891	22,268,632
Loans to other banks in Canada, secured	1 092,891	969.736
Deposits with other Banks in Canada	6,621,636	6,665.985
Due from agencies or other banks in the United Kingdom	12,505.023	10,362,521
Due from Banks or agencies in foreign countries	14,611,276	16,143.335
Dominion and Provincial Government securities	9,043.708	8,699.789
Other securities	60,699.313	61,219.589
Call and short loans on bonds and stocks in Canada	55.968,563	55.591,764
Call and short loans elsewhere	55.317,690	62,353,020
	$296,274.249	$305,610,634
Current Loans in Canada	$475,032,442	$458,706,908
Current Loans elsewhere	39,036,679	37,462,194
Loans to Dominion and Provincial Governments	1,080,172	2,167,413
Overdue debts	2,140,360	1,778,063
Real estate other than bank premises	780,230	713.729
Mortgages on real estate sold	479,604	481,449
Bank premises	12,076.541	11,945.821
Other assets	9,283,681	9 651,937
Total assets	$836,184,184	$828,518,332
Average amount of specie held during the month	18,955,796	18,412,627
Average Dominion notes held during the month	37,065,268	38,488,723.
Greatest amount notes in circulation during month	66,876.223	63,911,481
Loans to directors or their firms	9,081,162	9,011,032

The Bank Statement this month presents several features of interest. To begin with, there has been a substantial increase in capital. Authorized capital has risen by $2,250,000, for $2,000,000 of which the Sovereign Bank of Canada is responsible, while the remaining $250,000 is in the figures of the Bank of New Brunswick. Subscribed capital shows an increase of $2.409,000, the banks principally concerned being the Bank of Nova Scotia, the Royal Bank of Canada and the Sovereign Bank of Canada, whilst a growth of $1,346,000 is to be found in the paid-up capital, $350,000 of which is in the statement of the Royal Bank, and $736,000 in that of the Sovereign Bank. There is an increase in rest account of $1,066,000, principally due to the premiums received on new capital paid up.

In accordance with the usual rule, circulation has increased, though the increase of $3,557,000 is rather more than usual. In March of last year, indeed, there was a small decrease, this being due in part to the early spring in the West, and in part to the stagnation in business in the Maritime Provinces. The increase in circulation during March, 1904, was $2,024,000, and during March, 1903, $2,537,000. The larger increase this year is probably due to the great activity in the West.

Provincial Government deposits have risen from $6,790,000 in February, to $12,802,000 in March, the increase being almost entirely in the deposits held by the Bank of Montreal. Public deposits in Canada payable on demand have increased $2,899,000, while those after notice show a decline of $6,397,000. The Bank of Montreal shows a decrease in notice deposits of $6,915,000, and the Quebec Bank one of $1,012,000. Changes in the figures of the other banks are unimportant.

Total deposits in Canada now amount to $519,817,000, an increase during the year of $63,878,000.

For the last five years the figures have been:—

March	31st,	1902,	Deposits	$331,910,000
"	"	1903,	"	372,055,000
"	"	1904,	"	404,398,000
"	"	1905,	"	455,939,000
"	"	1906,	"	519,817,000

The increase during the past year has thus been greater than in any recent previous year.

Deposits outside Canada show a decrease for the month of $1,047,000, almost the entire change being in the figures of the Bank of Montreal.

Other items of liabilities show little change, and total liabilities have increased by $4,410,000.

On the assets side specie and legal tenders show a net decrease of $1,655,000, the total amount held being $56,246,000, as compared with $57,901,000 a month ago, $55,320,000 a year ago, and $47,228,000 two years ago. The percentage of cash to total liabilities to the public is now 8.5. Last year it was 9.4, and the previous year 8.8. This can hardly be regarded as satisfactory, more particularly when it is observed that the balances due from agents in the United Kingdom and abroad are considerably less than last year. If, however, we note the quick assets held as on 31st March in each of the last four years, the comparison will be as follows:—

(000 omitted.)

	1906.	1905.	1904.	1903.
Cash	$56,246	$55,320	$47,228	$38,083
Agents' balances	27,116	31,845	17,621	16,006
Securities	69,743	66,095	63,730	63.599
Call & short loans	111,286	83,047	78,557	88,208
	$264,391	$236,307	$207.136	$205,896
Total liabilities	$675,696	$586,643	$535.249	$497.750
Percentage quick assets to total liabilities	39.	40.	39.	41.

It will be observed therefore that the proportionate decrease in cash and agents balances is made up by an increase in call and short loans, and while these loans, particularly if in Canada, cannot be considered as satisfactory a reserve as would an equivalent amount in cash or in the hands of London or New York agents, not much fault can be found with the position as a whole. It is clear, however, that the resources of the banks are at present more fully employed than they have been during the previous three years, and this is evidenced again by the figures for current loans in Canada, which now stand at $475,032,000, an increase during the month of $16,326,000, as compared with an increase of $8,118,000 in March, 1905, and $13,939,000 in March 1904. The individual increases of $1,000,000 or more are:—

Bank of Montreal	$1,229,000
Merchants Bank of Canada	1,309,000
Canadian Bank of Commerce	2,680,000
Dominion Bank	1,804,000

A comparison of the current loans at the end of March in each of the last five years is as follows:—

Date.	Amount.	Increase.
1902	$300,066,000	$20,025,000
1903	346,293,000	46,227,000
1904	403,566,000	57,273,000
1905	422,351,000	18,785,000
1906	475,032,000	52,681,000

The increase of $52,681,000 recorded during the twelve months ending 31st March, 1906, as compared with that of $18,785,000 during the previous year, indicates that the slackening of pace which was in evidence last spring has given place to a renewal of the activity which prevailed in 1903. And there appears to be every reason why this activity may be expected to continue for some little time to come. Immigration is pouring into the West, railroad building is being actively pushed forward, and prospects for crops throughout the country generally appear to be good, although it is too early to speak at all definitely. Mining is picking up in British Columbia, while in Ontario the development of our hitherto neglected northern territory is attracting thousands. And—a most important condition for a producing and a borrowing country—prices of commodities continue to rise. A very busy summer seems assured, and we may reasonably expect that when we take stock at the end of the season we shall find that a large amount of wealth has been produced.

During the month call and short loans in Canada have remained practically unchanged at $55,000,000, while those outside Canada have been reduced by $7,000,000. Of this reduction, $5,000,000 is in the figures of the Bank of Montreal

Bank premises have increased by $130,000, and now stand at $12,076,000. A year ago the total was $10,376,000, and two years ago, $9,238,000. The individual banks showing the highest figures are the Merchants Bank of Canada $1,029,000, the Canadian Bank of Commerce $1,000,000, the Union Bank of Canada $969,000, and the Imperial Bank of Canada $926,000.

Total assets stand at $836,184,000, an increase of $7,666,000 during the month, and of $102,485,000 during the year.

* * *

—We have been compelled to hold over articles on Electric Power for Eastern Ontario; Why British Exports to Canada Do Not Grow; and various answers to correspondents.

THE LIFE INSURANCE INVESTIGATION.

The first sitting, outside of Ottawa, of the Royal Commission on Life Insurance, opened in the city hall, Toronto, on Wednesday, the 25th April. We may repeat that the Commission is composed of Judge McTavish, chairman, Mr. J. W. Langmuir, of Toronto, and Mr. B. L. Kent, of Montreal. The counsel to the Commission is G. F. Shepley, K.C.; who is assisted by Mr. W. N. Tilley. The Provinces of Ontario and Quebec are represented by I. F. Hellmuth, K.C., and Mr. Le Boeuf, respectively. The status before the Commission of the representatives of the two provinces has not yet been clearly defined. From what took place on the first day at Toronto, it would appear as though the Commission proposed to follow the course of the New York Insurance Enquiry, namely; to permit only the counsel for the Commission to conduct the examination of witnesses.

In Ottawa the Commission sat for about three weeks and examined at great length the Superintendent of Insurance, Mr. W. Fitzgerald, and the Department Actuary, Mr. A. K. Blackadar. Having gained a knowledge of how the annual inspection of companies is performed, and the method of conducting the Department, a basis has been established for the enquiry into the conduct of the business of the individual life insurance companies.

The Manufacturers' Life was the first company taken up by the commissioners in Toronto, and Mr. J. F. Junkin, the company's managing director, is now being examined. Thus far, two or three points of importance were developed, to which reference may be briefly made.

It appears that the control of the Manufacturers' was, on two occasions, in the hands of an individual stock-holder. It is realized that sometimes in a life company's history strong financial support has to be given to the enterprise, and that on such occasions there are many timid stockholders who are anxious to break away; then it may become necessary for some one to take over their holdings and bear the heavy burden. On one of the occasions to which reference has been made, this appears to have been the fact; on the other as far as can be gathered that was not the spirit in which a controlling interest was acquired. There is more or less danger of a controlling interest in the stock of such an enterprise as a life company falling into the hands of any one person. Theoretically and practically it means really that directors are elected, the management controlled, and the whole policy of the institution dominated by the controlling spirit. It is believed that greater responsibility would rest upon directors, and better management ensue, if the directors and officers realized that they were accountable to a comparatively large body of shareholders, instead of to a single individual.

Policyholders voting was also touched upon. It was developed that although policyholders were entitled to vote for the election of directors, they practically never exercised their right. This, to a large extent, is due, no doubt, to lack of knowledge of their rights, and to the absence of machinery for bringing out the policyholders' vote. The plan proposed by the Armstrong Life Insurance Commission in New York to remedy the same defect which was shown to exist in the large American companies is not, we believe, the best; namely, the publishing annually to the public, which, of course, includes competing companies and agents, the names of the customers of any one company and their addresses. Such a course would result in unscrupulous agents endeavoring to twist policyholders from one company to another. It would also afford a means of heated electioneering campaigns, etc. It is believed that the plan followed for many years by the Australian Mutual Provident is the best; namely, that each year there be sent out by mail to policyholders of the company full particulars of the proposed election of directors, together with a form of proxy, to be given in favor of such person as the policyholder elects, such person being himself a member of the company. This would make practical the securing of an independent policyholder's vote. This feature may be enlarged upon as the investigation proceeds.

* * *

INTERCHANGEABLE FIRE APPLIANCES.

That the fire brigade of one town or city should go to the help of another where a conflagration takes place is natural and noble. But it is a distressing thing to find, when the visiting brigade, with its fire engine, reaches the stricken town, that their efforts are greatly lessened in value when their hose or hydrant couplings will not fit the hydrants or hose of the town they came to assist. This has happened so often on this continent that one would think any proposal for curing such a condition of things would be quickly adopted.

Not so, however. It is more than thirty years since the National Association of Fire Engineers made recommendations that a universal thread of 7 1-2 to the inch on 2 1-2-inch fire-hose, and a few departments here and there adopted them. Then in 1879, and at various times up to 1891, other and not gravely different recommendations were made with the same object in view. But the subject remained, we are told, practically dormant until the autumn of 1904.

At that time the tremendous losses caused by the Baltimore, Toronto, and Rochester conflagrations aroused attention afresh to the need of some concerted action, since in all these cases aid offered to the places named was largely nullified because the visiting brigades could not use the hydrants nor hose couplings of the burning cities. The National Fire Protection Association now joined the International Fire Engineers in a committee to further definite action in securing uniformity of fire-hose and hydrant couplings. What this committee advised for general use is a coupling with 7 1-2 threads per inch for a 2 1-2-inch diameter; 6 threads per inch for a 3 or 3 1-2-inch diameter; 4 threads per inch for a 4 1-2-inch diameter. It is impracticable for us to give the other fractional dimensions in the committee's pamphlet, or to reproduce the illustrations, (actual size), of the couplings. What we can do, however, is to urge municipal officers or chiefs of fire brigades in Canada to correspond with G. I. Griswold, 56 Cedar St., New York, chairman of special committee on public fire service who, we doubt not, will send copies of the leaflets issued.

It is proof that the recommendations are worthy of attention when they have been approved by the National Board of Fire Underwiters, and the Fire Protection Association of the United States in May last, by the National Firemen's Association, which met at Kansas City last fall, by the waterworks associations of several states, and by the International Association of Fire Engineers in August last, which was attended by various Canadian fire chiefs.

What is more, the city of St. Louis, which has 600,000 people, has already adopted this standard, changing all its hose couplings and other connections from six threads to the inch to seven and a half to the inch.

A natural question is, why so plain a safeguard for cities and towns liable to conflagration—and what city or town is not so liable?—does not meet with instant adoption. It is not hard to imagine that the matter of expense stands in the way, for one thing. We are told that what the committee call "reducers and expanders," a device intended to connect hose of differing diameters, and which are called by the Toronto Brigade "adjusters," cost two dollars each, so that where cities like Buffalo and Detroit, which have something like 300,000 feet of hose, would have to provide them, the cost would be something heavy. Still, interchangeable fire appliances in adjoining cities are a very needful thing. Hamilton and Toronto have now, we understand, uniform diameters and threads, likewise Toronto Junction and East Toronto. It remains to have the improvement urged more widely.

* * *

THE LUMBER SITUATION.

The strength in all grades of white pine lumber continues as marked as ever, and as we pointed out in our last article on the subject, there is very little chance of the situation becoming any different, so far as the trade can foretell. Since our last report there has been no appreciable change in prices, though the tendency has been to get nearer to the higher range of values. In laths, this has been particularly noticeable. The demand for these, as well as for all other lines required in the building trade, has been very brisk, and more particularly so during the last few weeks.

The story that comes from various points in the United States is very similar. Conditions in the lumber trade are more tense than in any previous period of its history. A review in "Journal of Commerce," of New York, shows that values of pine in the past three years have advanced at least 30 to 35 per cent., the larger sizes of construction timber having been most prominent in the upward movement. The steady increase has been due to the unprecedentedly brisk demand. The prices ruling in spruce to-day, it says, are the highest on record, but this in no way deters available stock from being snapped up. Hemlock is also quoted at the highest rates known in history of the trade, namely, at (base), $22 per 1,000 feet, which on a general average means about $30 per 1,000 at retail. A few years since a base price of from $12 to $13 was considered good. One authority declares that as regards the general features of the lumber business, the outlook was never better. "Prices, to be sure, are high, and supplies are not coming in quite so fast as we would like, but the latter are certain even if so slow, and certain, also, is the demand; indeed, for the balance of this year it is likely to break all records. The call at manufacturing points for hard woods and cypress can hardly be met, and there is little likelihood of relief ahead. Additional shipping facilities would be welcome." At the present time the West is buying more heavily than ever from the East, and the railroads should now be in a position to avail themselves of a profitable haul both ways. As regards the British demand for Canadian woods, the circular of Farnworth and Jardine for April gives a good idea of the conditions at Liverpool. The arrivals at that port from British North America during the years 1904, 1905, and 1906, have been 70,693, 67,979, and 76,854 tons respectively up to April 1st. In the business of the past month there has been a fairly steady but quiet trade with little change of importance to report. The arrivals continue moderate, stocks with few exceptions are light, and values are well maintained. The circular goes on to give details as follows:—

> Canadian Pine Timber.—Waney, no arrivals; the deliveries have been limited, but stocks are light, and sales for forward delivery have been at improved prices. Square Pine.—A shipment has arrived coastwise; the demand is quiet, but stocks are small and values firm. Red Pine.—There is little enquiry. Oak.—Stocks are low, and there has been rather more enquiry; values are strong. Elm is only in limited demand, but stocks are moderate and values rule high. Of pine deals stocks are being reduced, and values are firm. For red pine deals there has been more enquiry, especially for narrow widths.
>
> N.B. and N.S. Spruce and Pine Deals.—The arrivals to the Mersey during the past month by the liners from St. John, N.B., and Halifax, N.S., amount to 3,170 standards, against 3,520 standards during the corresponding month last year; the deliveries have been satisfactory, and stocks, which are practically the same as last April, are now in a moderate compass; values continue steady. Pine deals are only in limited request.
>
> Birch logs have arrived more freely from St. John and Halifax, and are going largely into consumption; stocks are moderate and values unchanged. Imports of planks continue on a fairly liberal scale, and, although there has been a fair consumption, stocks have increased, and values are a shade easier.
>
> British Columbian and Oregon pine continues in better request, but the stock is large; values have improved.

* * *

MUNICIPAL HOUSE-CLEANING.

April and early May are properly house-cleaning times for towns and villages as well as for householders. It ought to be possible, indeed, for municipalities to "clean house" twice a year, which is the custom of many housewives. In spring, at any rate, the streets, the lanes, the play-grounds, the public parks, should be cleared of their winter accumulations—materials, often unsavory, which the snow has hidden. Water courses should be freed, and means taken to drain off stagnant water, or water which may become stagnant. Cess-pools under or near houses should receive especial attention, as breeders of diphtheria and typhoid. And if there are any features belonging to town or village, such as flower-plots, boulevards, the mill-pond, the bowling green, the band-stand, let them be furbished up or repaired, just as the individual householder will paint his verandah, fix his sidewalk, or refresh his wife's flower boxes. This much might be done as a matter of health, of pleasure to the eye if nothing else.

Another reason the authorities of towns ought to clean up not alone streets and lanes, but back-yards and outbuildings, is that the latter are apt to accumulate dirt (which is "matter in the wrong place.") This dirt is very likely to be such as gives invitation to fire, whether it consists of dust, shavings, chips, loose straw, paper, or old baskets, boxes and rags that have been hidden away for months in sheds and cellars. In the report for 1905, of Captain Hamilton, of the London fire brigade, he declares his belief that very many, indeed most, of the serious fires in that great city, the causes of which are described as unknown, are due to spontaneous combustion, "owing to the lack of proper iron receptacles for oily and general rubbish." Sparks from chimneys or from locomotives, a match or a cigar-stub carelessly thrown away, alighting in a pile of rubbish may cost a town many thousands of dollars loss by fire. It pays, therefore, to have an occasional municipal house-cleaning, and it is to be hoped that our Canadian city fathers will take the hint.

* * *

A WORD WITH THE RETAILER.

After Easter is likely to be a rather duller time for retail shopkeepers for a week or two, especially in the dry goods line. But the month of May, sunshiny as it is, should be a good month for selling spring goods. So let the shopkeeper put his best foot foremost to make his premises and his goods attractive. It is always well to clean up, to get rid of cobwebs and dust in a shop, and especially fly-specks on its window-panes. And we in Canada do not do half enough painting, of either dwellings or shops—a coat of paint would work wonders for the improvement of some store interiors. But in addition to these, Mr. Retailer, is it not worth while to make some changes inside your shop just for the sake of novelty?

On this last point the "Dry Goods Economist" has a paragraph that is worth transcribing: "Spruce up, Mr. Merchant," it says. "Are you going to put in any new 'fixings' this spring? One or more new showcases in place of those shaky-looking counters? Some new display rods or stands that should easily pay for themselves in short order? More up-to-date, more convenient tills for the notion counter? Here's a spot where many merchants fall right down. The notion counter is littered with a so-called display of small wares in original pasteboard boxes of all sorts, sizes and conditions. Consequently it always looks untidy and unsightly, and enough trade is lost day after day to more than fix it up in the best style known to the displayer's art." And a re-arrangement of goods on shelves or table and counter is a good thing, and with attention to window-cleaning and show-case trimming will cause people to say, with delight, "How nice your store looks! What have you been doing to it?"

Avoid monotonous sameness in your shop all the year round. This is good counsel, for whether men customers care about it or not, women and children notice changes, especially such as make things or places more attractive. Our contemporary has another sentence or two about spring:—"Moving time and housecleaning time are here. Stir up the housekeeping departments of your shop. Every housekeeper has simply got to have new fixings at this time. So long as the snow and the dirt of winter were all around outside, things looked all right inside, or passably so, anyway. But what a difference when the moving vans have shaken things into the new abode, or the strong maid of all work has turned the house topsy-turvy and let the spring sunshine in." Of course these things are not easy for some retailers to do. The man who is his own bookkeeper, buyer, porter, and parcel wrapper, must be a hard driven man of all work, and if work will bring it, success will be his. But he might "get there" quicker if he set some of the other parts of his business machinery in motion? By all means keep track of goods that you are out of and that your customers have asked for. Every storekeeper should be particular to keep his order-book checked up.

* * *

DEATH OF JOHN M. BOND.

There were laid in the grave on Friday last in Guelph the remains of John Martin Bond, who for forty years had resided in that city, where he was widely known and esteemed as a progressive and successful merchant. About 1860 he came to this country from Ireland and entered the employ of Rice Lewis & Son, the well-known Toronto hardware house. Shortly afterward he removed to Guelph to manage the branch hardware establishment of Henry Mulholland & Co. there. Shortly after he bought out that business, and conducted it under the style of John M. Bond &

Co., building it up to large proportions by shrewdness, skill, and steady application. In 1905 he converted the business into a joint stock company, taking into partnership his brother, Mr. W. G. Bond, his head traveller, Mr. T. Keating; and his book-keeper, Mr. James Millar. The title of the firm was changed from John M. Bond & Co., to the Bond Hardware Co. Mr. Bond retained the paramount interest, and was chosen president.

Mr. Bond was a good citizen, taking an active share in enterprises for the development of Guelph and devoting, besides, much time and means to hospital, educational and church work. A prominent member of the Guelph Board of Trade, he was also a member of the Guelph Junction Railway Board, and a director of the Guelph and Ontario Investment and Savings Society. Possessing much public spirit, he was active in political and municipal work, and could easily have had both party and city rewards in the way of office had his health of late years permitted him any exhaustive physical exertion. But it is doubtful if he really had any great desire for public life, being rather disposed towards a simple commercial and domestic existence. He died suddenly while on a visit to Montreal, where he had very considerable business interests. Arrangements had been made, we are told, for continuing the metal and hardware business in Guelph. It is understood that Mr. Bond left a large estate.

* * *

SAO PAULO COMPANY, LIMITED.

Encouraging accounts of the steady growth of this company's business and revenues continue to be received. The annual meeting on Monday last listened to a report for the calendar year 1905 which could not be otherwise than gratifying. The gross earnings were $1,098,405 as compared with $1,419,338 in the previous year, and the net earnings $1,238,473 as against $941,782, showing the operating expenses to have been somewhat greater last year than in 1904. Interest charges, $275,846, were paid and a dividend of $599,594, at the rate of eight per cent. Putting $50,000 to contingent account, there was left a sum of $313,032 to be carried to profit and loss account. This is a very satisfactory showing. To meet the increasing demands on all branches of the system a sum of $524,000 was expended on capital account during the year. New tramway track has been built of about 2¼ miles and contracts for the supply of power have increased. The resident vice-president advises, besides the extension of the company's lines to Pinheiros and Santa Anna, suburban districts to Sao Paulo, which are developing rapidly.

It appears from the report, signed by the president, Mr. Wm. Mackenzie, that railway and port works are being promoted at various Brazilian cities, as the general credit of the country has improved and successful foreign loans have conduced to a marked appreciation of exchange. The condition of the city of Sao Paulo is being steadily improved, and, although it was a poor year for the coffee crop, 1,400 houses were built in the city in twelve months. The company's advices are to the effect that no serious trouble arising from revolts is expected, and that foreign enterprises—and this company is a foreign enterprise, being launched and maintained by Canadians—can always count on the sympathy and protection of the Brazilian Government.

* * *

BANKING AND FINANCIAL.

Molsons Bank has opened a branch at Edmonton, Alberta.

A branch of the Home Bank of Canada has been opened at 444 Talbot Street, St. Thomas. Its manager is Mr. Waterbury, formerly Mr. Waterbury was manager of the Merchants' Bank in St. Thomas.

The Provincial Legislature of Prince Edward Island has passed a measure imposing a minimum tax of $1,000 on banks, one-fifteenth of one per cent. where business is $2,500,000, and one-twentieth of one per cent. on all over that amount.

A telegram from Ottawa states that Mr. E. Clement Green, for several years manager of the local office of R. G. Dun & Co., has resigned his position to become manager of the Ottawa branch of the Standard Bank, his successor in the Dun Company being Mr. Webster, of the Montreal office. The branch of the Standard Bank will be opened shortly opposite the Russell House.

The measure which the Treasurer of Ontario introduced in the House on Wednesday doubles the present tax on rail ways over 150 miles long. Last year the tax yielded $191,990. The increase under the new bill is estimated at between $180,000 and $190,000. Rural electric railways running on highways are to be taxed. Hitherto they have contributed nothing to the Provincial revenue. All city or town agencies of banks will pay a tax of $25 each, instead of only one agency paying it, as formerly.

An organization meeting of shareholders in the Sterling Bank of Canada was held on Monday last at 50 Yonge Street, Toronto. By-laws were read and adopted, and the following gentlemen elected directors:—G. T. Somers, Toronto; W. K. George, Toronto; C. W. Spencer, Montreal; John H. Tilden, Hamilton; J. C. Eaton, Wm. Dineen, Noel Marshall, H. Wilberforce Aikens, Sidney Jones, Toronto;. The directors were congratulated on having secured the services of Mr. F. W. Broughall, late assistant manager of the Dominion Bank, as general manager of the Sterling Bank. Mr. W. D. Hart, late of the Standard Bank agency, Kingston, will be the inspector. Mr. Somers was chosen by the directors to the presidency and Mr. George to the vice-presidency.

* * *

LIFE ASSURANCE NOTES.

So many quack doctors are arising in the insurance world, so many wordy writers in the States especially who plan to cure the evils of the business without any knowledge of it, that "Insurance" hits out at the hysterical reformers as follows: "When a man has once begun to get luny there is no positive stopping-place; he is liable to find that his legs are glass and he must walk carefully, or that he is the angel Gabriel, and therefore under obligations to fly."

The report for 1905 of the United Kingdom Temperance and General Provident Institution has been issued. As a result of the quinquennial valuation, the surplus shown is £1,370,591. Out of this it is proposed to declare increased bonuses. On whole-life policies the bonuses will be at the rate of £2 2s. per cent. per annum in the temperance section, and £1 15s. per cent. per annum in the general section. The amount of undivided surplus carried forward is £375,000, as compared with £314,000 five years ago. The working expenses of the quinquennium have been 11½ per cent. of the premium income.

The Statistical Department of the German Empire in its latest returns, furnishes some suggestive facts regarding the question of suicide in the Fatherland. Between the years 1895 and 1905 suicide has increased, but among women the increase has been relatively greater than among men. Among men the most common methods of suicide are shooting and drowning, and among women drowning and poisoning. Few women shoot themselves. The chief causes of suicide among both men and women are connected with pecuniary troubles, but while among men drink comes next, among women it is commonly unrequited love or desertion.

The National Burglary Corporation, established as an insurance office in 1902, has developed a fire department as the outcome of its combination business in fire and burglary. As the fire offices have been attracted into casualty insurance, it is natural that the accident people should be contemplating a foray into the domains of the encroachers. The Ocean and the Law Accident offices are credited with retaliatory intentions, and it may be no bad thing for assurers to have the alternative of dealing with such institutions as these. The Colossus among miscellaneous companies—the Ocean—has taken power to add this new sphere to its multifarious others.—London Letter.

FIRE INSURANCE ITEMS.

A letter of the following tenor is about to be sent to every chief of a fire brigade in Ohio: "Dear Sir,—A suggestion: Last spring the authorities of an Ohio town asked the newspapers to say to the people that all rubbish found piled up at the pavement curb on a certain day would be removed free of charge. This resulted in a general cleaning up of the town, and certainly lessened the fire loss. The people of your town recognize you as the authority on the subject of fire dangers, and will give attention to what you say."

Says Mr. Davis, the Columbus fire marshal: There is no safe place but the stove for rags that have on them any vegetable or animal grease. This includes rags which have been used to wipe oil from the sewing machine. Floor sweepings under furniture or in a closet are liable to take fire spontaneously or from a flying match head. Sawdust used in sweeping floors, if left in a corner where there is no current of air to carry off the heat it generates, is very likely to become hot enough to ignite itself. . . . The most dangerous closet is that under a stairway, because inflammable materials may hide in its long toe, and if a fire starts in it the best avenue of escape from upper stories is soon cut off.

A story to the following effect about the Atlas Assurance Co. appeared a fortnight ago in the London "Telegraph": "There is reason to believe that negotiations are on foot which aim at a future identity of interests between the Commercial Union Assurance Company and the Atlas Assurance Company. Should anticipations prove correct, this will mean an important addition to the long list of recent amalgamations and absorptions affecting the insurance world." Mr. Herbert Brooks, the chairman at the meeting on April 10th, denied this story, saying: "There is not a word of truth in it, and, I think, it is monstrous that any paper, aspiring to a respectable position, should publish such reckless statements." The company's statement for the year shows very satisfactory figures Its total assets reach £3,352,000 sterling; the Life Assurance Fund amounts to £1,880,000, and the Fire Insurance Fund to £820,000. In the fire department of the company's business the year's premiums (1905) were £983,557, equal to, say, $3,917,000. Losses were £454,074; commissions and management expenses, £345,787, equal respectively to 46.16 and 35.15 per cent. of the premiums, or in all, say, 81.31 per cent. The business of this large and strong company continues to be managed carefully and well.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ending with Thursday, April 26th, 1906, as compared with those of the previous week.

	April 26.	April 19.
Montreal	$26,616,545	$20,625,346
Toronto	23,054,798	17,315,052
Winnipeg	9,002,993	7,245,302
Halifax	1,692,951	1,260,169
Hamilton	1,457,759	1,130,128
St. John	1,094,918	874,138
Vancouver	2,386,889	1,820,675
Victoria	757,466	350,777
Quebec	1,384,657	1,255,752
Ottawa	2,342,773	2,155,850
London	1,049,307	913,390
Total	$70,841,056	$54,946,579

MERITS AND DEMERITS OF WORLD'S FAIRS.

It shows what different views some people hold on the value of world's fairs to glance at the report of a discussion held in the British House of Commons on a project to hold one in London in 1908. The proposal was made by a member named Fell, and he asked the Government to give financial support to the scheme. This drew from the Prime Minister an expression of doubt as to whether such a fair would be really welcomed by the commercial community. A newspaper controversy is now being carried on in London and elsewhere in the Old Country as to the merits and demerits of great exhibitions. It is believed by its opponents that displays of British manufacturing and commercial methods teach foreigners too much. On the other hand there are many who contend on the strength of what was said by the British Commissioners to the St. Louis Exposition, that British manufacturers lost orders through not exhibiting there. Many large London traders favor the scheme, especially those who are not manufacturers, but opinion in other circles is much divided.

THE METRIC SYSTEM.

The opponents of the Metric System seem to be possessed with the very enthusiasm of resistance to its adoption. Within a fortnight we have received three different batches of literature combatting the system, two of them by post from the United States and one conveyed to us by a Toronto manufacturer. First came Mr. Dale's latest protest—incorporating much from this gentleman's pen that we printed last year—six different leaflets reprinted from various papers; Herbert Spencer's brochure, being a reprint of his letters to the "Times"; "Plain Facts," a pamphlet issued by the American National Association of Manufacturers; "Plain Opinions," another pamphlet from the same source; four foolscap pages, typewritten, from Napoleon the Great (that is, the sentiments are Napoleon's); "The Metric Fallacy," a lecture at Cornell by Frederick Halsey, who is an American authority on the subject; and lastly a 230-page book entitled "The Metric Fallacy," of which, however, the last 100 pages bear at the top of the page the sub-title, "The Metric *Failure*," so determined are its authors, S. S. Dale and Fred. A. Halsey, so full of threatenings and slaughter, that the system shall have no chance of sympathy or even life. Prefaced to these last hundred pages, which relate mainly to the textile trade, is a quotation from Sartor Resartus reminding us that:—

> "All that men have thought, dreamed, done, and been, is included in the one pregnant subject of *clothes.*"

This, indeed, is one of the most interesting parts of the book, abounding, as it does, in Shakespearian quotations and strong, almost bitter, language. We do not wonder at his bitterness, however, when it is proposed that the adoption of the system shall be compulsory. A brief history of the Metric System is given, viz., that it was a creature of the aristocracy and the established church, that it had its origin in the royal household of Louis XVI. of France; that the scientists who designed it, clever as they were in the study, were as densely ignorant of the practical affairs of every-day life, that the chief of them was a visionary. And their conclusion is that, page 137: "The changing of established standards is impossible." . . . Page 226, that: "The trend throughout the world is toward the supremacy of the English language and the English yard—pound." This portion we perceive is written by Mr. Dale. This book is the most cogent collection of argument against the Metric System that we have seen. It now behooves the Boards of Trade the world over who have pronounced in favor of it, and the many professors and writers, from Lord Kelvin to Simon Newcombe, who have used pleas showing its desirability, to furbish up their armour. Germans scientists and manufacturers are probably among the most persistent and able of the advocates of the Metric System, which has powerful friends in the British Islands. But many American engineers, manufacturers and writers demur entirely to its necessity and even question its relative convenience. The book is published by the D. Van Nostrand Company, 27 Warren Street, New York, and is an excellent dollar's worth.

* * *

AUTOMOBILES.

The present month has witnessed the most extensive displays of automobiles and their accessories ever known in Canada. There were two in Toronto in rapid succession, first in the Granite Rink on Church Street, next in the Mutual Street Rink, which building and adjoining land have, indeed, been purchased for the purposes of a garage. Now there is an automobile show going on at the Arena in Montreal. The Toronto exhibitions were not, it must be admitted, patronized by the public to an extent commensurate with their real industrial interest, nor with the pains taken by partitioning those immense buildings and decorating them handsomely with flags, bunting, and carpeting. The Montreal exhibition, we are glad to learn, is better patronized, for some five thousand persons passed through the Arena on Saturday night.

The earliest of these three shows was most largely devoted to exhibiting machines of Canadian and American manufacture: products of the Canada Cycle & Motor Co., whose works are at Toronto Junction, and the Oldsmobile Company at St. Catharines, dividing attention with the Pope, the Pierce, the Rambler, the Royal Tourist, the Marion, the Packard, the Peerless, the Winton, the Thomas, the Ford, the Stevens-Duryea, and other United States products. It may be remarked here that the output of Detroit alone for a single year is placed at over $4,000,000. In the second exhibition were to be seen lines of European product of greater power and larger size—and consequently of greater expensiveness—than we have been accustomed to in Canada, though both American and Canadian were on view. A word ought to be said in favor of the really handsome decorations of the place, the whole 200 feet by 100 interior being canopied with white and yellow and a continuous row of electric lights extending all the way around what used to be the Caledonian Rink. In all three cases bands of music filled the air at times.

It is no easy matter to decorate the Montreal Arena, which huge place is made use of for circus purposes, for an occasional kermesse or skating carnival. Green carpets and a dainty color scheme of hangings have now made the bare building attractive, however, and there were no barriers to prevent spectators wandering about among the exhibits. About thirty manufacturers, we are told, were represented. Accessories were not wanting, nor marine electric motors or gasoline launches. In accessories, about everything desired could be found from tool kits to searchlights. There were all sorts of portable jacks, batteries, coils, sparking plugs, tires, and thousands of things necessary and luxurious. Horns, horrid horns, were numerous and noisy, while garments for motoring and caps for the pastime were in evidence. Motor cycles were there, too.

Runabouts, speeders, delivery vans, touring cars, electric surreys, red, grey, green, or black, were all about. Much interest was shown in Montreal, perhaps especially in the French and Belgian machines, expensive as they are, for there is a distinctive finish and style to the French built car. There are some fine looking autos, made in England and Scotland which will not need to dread a test in the matter of appearance. The British and French Motor Car Company show handsome European cars, including DeDion, Bouton, Panhard, French; Dailmer, Swift, English; Argyle, Scotch; and Minerva, Belgium. The Dominion Motor Car Company has a line of Maxwell cars, American make; and Argyle, a Scotch built car of grace and strength. The Canadian Automobile Company is showing Darracq, Cadillac, and Oldsmobile cars. The first name is a well-known French car.

Toronto, Hamilton, London, and the level portions of Ontario contiguous to them present an excellent field for the use of automobiles, whether for touring or—when our good roads movement is more generally advanced—for light freight delivery purposes. It may be expected, therefore, that the use of these convenient machines will grow. Montreal and Quebec are more hilly, it is true, but there are delightful drives in the suburbs of both. Then the North-West! what *fields* for exploiting them. While Canadians are better walkers than their American neighbors, and are less lazily prone to drive behind either horses or chauffeurs, it will not be long before they, too, will buy automobiles by the thousand. And, when they do, they will be likely to buy Canadian makes more largely than the splendid machines from the older countries, which commend themselves perhaps more to persons of long purses and aristocratic tastes.

* * *

—The Board of Trade at Lethbridge, Alberta, held their annual meeting on Wednesday last week, and elected the following officers:—President, C. F. P. Conybeare; vice-president, E. U. Rylands; executive committee, Messrs. Oliver, Freeman, Young, Nourse, Barford and Sick; ex-officio members, the mayor of Lethbridge and the member of the legislative assembly. F. H. Barnes was re-appointed secretary-treasurer.

The Manufacture of Satisfaction.

SATISFACTION is the secret of successful business. It doesn't matter how large or how small your business may be, it takes satisfaction to run it—genuine satisfaction—your customers' satisfaction.

Thus every progressive retailer is in one sense a manufacturer. He is continually manufacturing satisfaction with which to carry on his business. Some retailers, like the drones in the hive, let the other fellows do the hustling. These soon lose what honey they might have had.

Now in order to manufacture anything substantial (and satisfaction certainly is substantial), it is necessary to know where to get the material at the closest price for a reliable article. That's where I come in, I supply you with the best that's made

IN FURS AND FUR GARMENTS

PAQUET Furs are manufactured from the best selected raw skins, right in my own actory, which is the largest in Canada and one of the largest in the world. I have always on hand a stock of raw skins, ready to cut at a moment's notice. I can make up special orders to please your customers' individual tastes. Could anything be more suitable for the production of good solid satisfaction? Paquet styles are "up to the minute."

Travellers are now on the road—wait for them.

RIVERDALE BUSINESS MEN'S ASSOCIATION.

Another meeting of the business men of the east end of the city of Toronto was held on Friday night last. It was called for the purpose of bringing to a definite point the efforts of many citizens down there during the last month, and resulted in the formation of the Riverdale Business Men's Association. Between thirty and forty gentlemen had assembled in Dingman's Hall, corner King and Broadview Avenue (and if a few score of our west-end Torontonians had been present, as the writer was, they would have been as much touched as he to find what varied activities were going on under the one roof that night. We met on the top floor, the fourth story; below us was proceeding a banquet of the East-end Conservative Association with its songs and speeches; below that again was a dance hall, where scores of young people tripped the light toe to a lively piano; in adjoining chambers of the big place, lodge-rooms, etc., were meetings of other kinds.) Mr. A. R. Clarke, manufacturer, was in the chair and a well considered programme was submitted, the result of conferences of the committee of fifteen business men whose names we have already given in previous references to the subject. Correspondence had with the Grand Trunk Railway people about a spur line of road along Ashbridge's Bay was read, likewise reports of conference had with the Harbor Master about depth of water in the Bay itself, reports from aldermen as to needed bridges across the River Don, letters respecting improved service by express companies and the street railway, also views upon a branch post office, which is felt to be needed by this important section of the city, and as to improvement in the East-end Library. Many co-ordinate or subordinate subjects were mooted and reserved for future action. The chairman dwelt with force upon the coming importance of Ashbridge's Bay as an entrance for sail vessels and steamers to what must become a busy part of Toronto's lake front. Mr. Monypenny made the public-spirited suggestion that the Riverdale Association should get into touch with the Guild of Civic Art and strengthen its hands in the direction of developing a system of parks and gardens which shall not only beautify the city but enhance the value of land now either waste or ugly. But it is not remarkable that Riverdale should take an interest in what is æsthetic, since it already has streets named after Thackeray and Dickens, nay, even Hogarth Avenue and Stratford Avenue.

Mr. Poucher insisted most strenuously on concerted effort by the 24,000 people in this east end of Toronto to obtain from the city council a fair share of expenditure for Riverdale as compared with the West End. This, he declared, the East End has never had. Aldermen Fleming, Chisholm, and Church made brief addresses, indicating intelligent interest in the territory east of the Don.

The election of officers being proceeded with, the gentlemen whose names follow were found to be the choice of the meeting for the offices indicated. The name of the body is the Riverdale Business Men's Association:—

President, A. R. Clarke.
Vice-President, Dr. Sneath.
Secretary, H. W. Barker.
Treasurer, L. S. McMurray.

Information Committee.—A. E. Walton, E. S. Reed, Wallace Maclean.

Vigilance Committee.—E. B. Ryckman, T. F. Monypenny, J. M. Hedley.

It is gratifying to find, from the presence of his name on one of the important committees, placed there in his absence, that the Association is not unmindful of the valuable services rendered by Mr. Wallace Maclean in the organization of the body. We have already dwelt upon the scenic beauty of the region east of the Don and north of Queen Street. As a surprise to the man who knows only the western part of Toronto the sight that meets his gaze from, say, a Broadview car is comparable to the panorama a Sunday stroller sees from the Pisgah height at Macpherson Avenue east and Chesnut Park drive, over the ravine to the north.

The Traders Bank of Canada

Notice is hereby given that it is the intention of the Traders Bank of Canada, after publication of this notice for four weeks in the "Canada Gazette" and in a newspaper published in the City of Toronto, to apply to the Treasury Board for a certificate approving of the following by-law of The Traders Bank of Canada:

At a special General Meeting of the Shareholders of the Traders Bank of Canada, held at the Head Office of the Bank, in Toronto, on the 17th April, 1906, the following By-law was passed:

BY-LAW NO. 14

A BY-LAW TO INCREASE THE CAPITAL STOCK OF THE TRADERS BANK OF CANADA.

WHEREAS the capital stock of The Traders Bank of Canada is $3,000,000, divided into 30,000 shares of $100 each, the whole amount of which has been taken up;

AND WHEREAS the greatly increased business of the Traders Bank of Canada necessitates provision for a larger amount of money than is now at the command of the Bank;

AND WHEREAS the extending of the Bank's operations to Manitoba and the Western Provinces having been determined upon and premises opened, greater facilities are required on the part of the Bank for carrying on its business in these localities;

AND WHEREAS the future prospects of the Bank appear to warrant such reasonable increase of capital as will meet the present and immediate future requirements of the Bank's operations;

BE IT THEREFORE ENACTED by the shareholders of the Bank assembled at the Special Meeting held at the Head Office of the Traders Bank of Canada, the 17th day of April, 1906;

(1) THAT the capital stock of The Traders Bank of Canada be, and the same is hereby, increased by the sum of Two million dollars, divided into 20,000 shares of $100 each.

(2) When the directors so determine, and from time to time as they think fit, the said increased stock shall be allotted to the then shareholders of the Bank pro rata, and at such rate as is fixed by the directors, but no fraction of a share shall be so allotted; provided that in no case shall a rate be fixed by the directors which shall make the premium (if any) paid or payable on such stock so allotted exceed the percentage which the reserve fund of the Bank then bears to the paid-up stock thereof.

(3) Any stock allotted from time to time which is not taken up by the shareholder to whom such allotment has been made within six months of the time the notice of the allotment has been mailed to his address, or which any shareholder declines to accept, or, any shares which shall not be alloted by reason of the provision hereinbefore contained against the allotment of fractions of a share, may be offered for subscription to the public, at such time, in such manner, and on such terms as the directors may prescribe.

SAO PAULO TRAMWAY, LIGHT & POWER COMPANY, LIMITED.

Report of the Fifth Annual Meeting, held Monday, April 23rd, 1906.

Your directors beg to submit to the shareholders their annual report, together with the financial statement for the year ending 31st day of December, 1905.

You will find by reference to the report which follows that the gross earnings aggregate **$1,908,405.73**, an increase of **$489,067.23**, or 34 per cent. over the previous year, while the increase in the operating expenses amounted to 40 per cent., resulting in net earnings from operation of **$1,238,473.86**, or an increase of 31 per cent. over 1904.

Out of the net earnings there have been declared and paid four quarterly dividends of two per cent. each, at the rate of eight per cent. per annum, aggregating $599,594.49, interest charges $275,846.86, and there was transferred to contingent account $50,000, making an aggregate total distribution of $925,441.35, leaving the sum of $313,032.51 to be carried forward.

Capital Expenditure.

The total expenditure on capital account during the year amounted to $524,976.56.

President's Remarks in Moving Adoption of Report.

In reading and moving the adoption of this, the fifth annual report of the company, it affords me much pleasure in calling your attention to the continued prosperous condition of the company's affairs in Sao Paulo.

As has been stated in the report, our increased revenue has not been without increased expenditure, but it should be remembered that a large portion of this increase in working expenses is accounted for by the enhanced value of Brazilian currency, which also played so favorable a part in augmenting our gross earnings.

The large expenditure on capital account, part of which was commenced during 1904, but completed this year, was found necessary in order to meet the increasing demands in all branches of our system.

The statistical tables to be found in the printed report will, I am sure, be interesting to all shareholders, and will give a very comprehensive review of our growth and development.

I consider the report most satisfactory in all respects, and have much pleasure in moving its adoption, seconded by Mr. Frederic Nicholls.

STATISTICAL STATEMENT.

IRON ORE FROM THE LAKE SUPERIOR STATES.

The growth of the iron ore traffic between the southwest shore of Lake Superior and the cities on Lake Erie has been very great for many years. It is believed by those who follow the shipping movement on the Great Lakes that the opening of navigation this year will mark the beginning of one of the most active seasons in iron ore in the history of the iron and steel industry of the United States. In the neighborhood of 40,000,000 tons of iron ore is likely to be brought down this year from the mines of Michigan, Minnesota and Wisconsin, or more than 5,000,000 tons in excess of 1905, the banner year. Last year navigation started in the latter part of March, and the opening this year may be two or three weeks later. Shipments in 1905 were not well under way until May, in which month more than 4,000,000 tons were brought down. The U. S. Steel Corporation's lake capacity has been largely increased over the last year, and it is likely that its freight tonnage in 1906 will be the largest known. The Steel Corporation's shipments in 1905 represented 54 per cent. of the total; in 1904, 15 per cent., and 1903 63 per cent. If 40,000,000 tons of iron ore are shipped this year it is safe to assume that the pig iron production of the United States will be close to 24,00,000 tons.

* * *

—Satisfaction is expressed that at length an experimental fruit station is to be established by the Ontario Government in the Niagara peninsula. It has been agitated for during some years, but its actual establishment has been facilitated greatly by the offer of Mr. Rittenhouse, of Chicago, formerly a native of Jordan, in Lincoln County, Ontario, to donate fifty acres of good land in the latter district. He also offers to macadamize the road leading to the farm and to supply water at nominal cost. The generous proposal has been accepted, and plans are being rapidly perfected.

* * *

—The committee appointed by Toronto city council to report upon the matter of level crossings for railroads, does not look with favor apparently on the offer of the Grand Trunk Railway to depress their tracks from Sunnyside to Bathurst Street, sharing the cost equally with the city. The larger part of the expenditure would be upon the acquirement of land and the building of retaining walls, and only a comparatively small amount would be devoted to the building of bridges, the only part of the work in which the city is particularly interested. The committee on the other hand instructed the City Engineer to prepare an estimate of the cost of an overhead bridge at Sunnyside for trolley cars and other vehicular traffic as well as pedestrians, and when this is obtained will apply to the Railway Commission for an order compelling the company to erect the bridge at its own expense. Level crossings, such as that at Sunnyside, have been a peril to the public long enough; when some really serious accident takes place, which is quite possible any day, there will be an outcry and a rush to remedy the present foolish state of things; but it will then be too late.

The Bank of Toronto.

Dividend No. 100.

Notice is hereby given that a Dividend of FIVE PER CENT. for the current half-year, being at the rate of Ten per cent. per annum, upon the Paid-up Capital of the Bank, has this day been declared, and that the same will be payable at the Bank and its Branches on and after

Friday, the 1st day of June next.

The Transfer Books will be closed from the 17th to the 31st days of May, both days inclusive.

By order of the Board.

The Bank of Toronto, Toronto,
25th April, 1906.

D. COULSON,
General Manager.

Imperial Bank of Canada.

The Traders Bank of Canada.
Toronto, 17th April, 1906.

H. S. STRATHY,
General Manager.

COMMERCIAL HANDBOOK OF CANADA.

Reference has been made repeatedly in these pages to this publication, projected in 1904 by Ernest Heaton, B.A. Oxon. The edition now put forth in its second year is entitled "The Commercial Handbook of Canada, Trade Register, and Index of Industrial Opportunities"; 265 pages, paper 60 cents, cloth $1.00. To exchange and other tables, Customs and excise duties, legal and postal information, is added export and import statistics, banking, mining, and insurance information and hints to traders. Among the last-named we find, pp. 13 and 14, a digest of the System of Standard Time, originated by Sir Sanford Fleming in 1876 and now in use both in Europe and America. It is manifest that a great deal of labor has been expended on various parts of this Handbook, witness the details as to imports and exports on pages 81 to 87, a marvel of condensation. For persons out of Canada the Boards of Trade Register is valuable, so, too, is the list of useful Government publications, the sketch of Canada's Progress, and the compilation entitled Industrial Opportunities, from which the towns which have furnished data may well expect some return. The table of travel distances is an unusual feature, and the page (91) giving population and assessment of leading towns will be found of service. The author makes it clear in his preface that the Handbook is intended as "a medium to make known from year to year the opportunities afforded in the Dominion for the employment of men and money"; and it is also foreshadowed that "from an Imperial point of view pages should be devoted to Imperial trade." It is to be hoped that Mr. Heaton's industry may be rewarded by a large sale of a work which gives in small compass a graphic exhibition of Canadian trade features. His office is at 6 Colborne Street, Toronto.

THE UNSYSTEMATIC AGENT.

We have all known fussy business men, always in a hurry but not getting much done. And among them we have known in particular the fussy insurance agent. In a communication to the "Commercial World," of London, "E. R. S." selects for description from the great army of employees in the insurance professions one type in particular which may be said to be common to all districts—The agent without a system, and who does not *clinch* business. He is thus hit off:—

This man has been described as "The busy man who does nothing," and this description can scarcely be improved upon. Everybody knows him, he appears to be always in a hurry, he bounds into the office three or four times a day, takes up half the counter with his various impedimenta, asks a half-dozen questions without waiting for an answer to any, enquires for various forms of stationery which he usually leaves behind him, and after monopolizing the clerk's attention during the whole time he has been in, bounds off muttering something about being half-an-hour late.

He is always behind time, he is in at the last minute on paying-in day, and often he has not even then finished his collecting, consequently his arrears are always fluctuating—up this week and down next with no apparent reason.

To anyone not acquainted with him he would appear to be a very energetic and busy agent, but his superintendent knows from his return how much of this energy is wasted. He is rarely a success, often he is rather a source of anxiety to his superintendent. There is no doubt that he works hard; there is, perhaps, not a man in the district who puts in more time than he does, but his work produces nothing, in fact, much of it is only caused by his lack of system. He goes over the same ground twice, he has no regularity, his policyholders never know when to expect him, consequently he misses many, and his list of back calls takes him an extra day each week to attend to and he never seems to have time to canvass.

The assistant superintendent tells the same tale. He makes an appointment for a day's canvassing, but he has no list of arranged calls ready, but drags the assistant round from one end of the town to the other just as the thought strikes him, consequently they have made, perhaps, two calls by noon, and they make no more in the afternoon, the rest of the time being spent on the pavement with no result but worn shoe-leather.

It is something of a problem to know what to do with a man of this stamp, who may possess the materials for the making of a good agent, the only difficulty is that his energy is wasted instead of being productive. To convert him into a good progressive agent the superintendent will have to take him in hand, and go with him on his round to see where the fault lies. Loss of time caused by collecting over ground twice or by taking too wide an area should be noted and re-arranged, with the object of condensing the work into one locality. When canvassing, the man should be shown that a system is essential; if he is "raw" in canvassing he should confine his operations to one locality at a time, or if working on introductions he should classify them so as to be able to visit as many as possible in the time at his disposal. Then after all the outside work has been done his books should be examined, for it is likely these will also show indications of his failing; he should be induced to spend a little time regularly on clerical work, sheets should be filled up as received so as to save any confusion and correction. After a week or two of this sort of proceeding the agent will, doubtless, find out the advantage of systematic work. He will see, if he has good sense, that he has been working at a disadvantage. And in reforming him the superintendent may find that the week has been well spent, and that the company has gained a producer who had previously been a waster.

* * *

—The Great Northern Railway, it is said, has located the line by which it proposes to enter Winnipeg from the south. It parallels the Canadian Pacific road on the east side all the way from Gretna, and crosses the city limits just south of the junction of the Canadian Northern and the C. P. R. in Fort Rouge, and runs alongside the last-named road to Elgin Avenue. The company have applied to the officials of the Canadian Northern Railway for permission to cross their road at Menta, Wakopa and west to Carman. This will give the Great Northern a direct haul from a rich wheat country into the twin cities, and will materially aid the milling industries of Minneapolis.

* * *

—Canada is to be an exhibitor at the exhibition at Milan, Italy, the opening of which has been postponed a few weeks on account of the Vesuvius eruption. She will also, we are told, have one of the most important pavillions of the fair. This is proper enough, for if we are to have an exhibit at all we cannot afford to have a meagre one. Mr. C. H. Catelli, president of the Montreal Chambre de Commerce, who has been appointed Canadian Honorary Commissioner, has received his credentials and is now preparing to leave for Genoa from New York. Mr. Hutchison, the permanent commissioner, and Mr. Mariotti, a member of the staff, have already left for Genoa, en route for Milan.

* * *

—Much interest is being manifested in the award of contracts for the National Transcontinental Railway. It is now formally announced that the contract for the Winnipeg-Superior Junction section has been awarded to J. D. MacArthur, of Winnipeg, and that for the Quebec-La Tuque section to Hogan and Macdonald, Ottawa. The figures for the former work are $13,250,000, and those for the latter about $5,750,000, these being the lowest tenders in each case. The contractors in question have both put up large deposits. The distance from Winnipeg to Superior Junction is 245 miles, and from Quebec to La Tuque 150. It is required that work on the first-named section is to be finished by October 1907 in order to help in the crop movement of next year. The contract for the steel superstructure of a bridge over Cap Rouge Valley, near Quebec, has been given to the Dominion Bridge Co.

STATEMENT OF BANKS acting under Dominion Gov't charter, for the month ending 31st March, 1906.

Mercantile Summary.

The Jenckes Machine Co., Sherbrooke, Que., has built a 250 horse-power hoist for the Granby smelter at Phœnix, B.C.

At Sault Ste. Marie, Ont., on Monday last, four boarding houses in the west end were burned at a loss of about $15,000, and one man was killed and two or three others injured.

The Bothwell Locomotive Company, Limited, Toronto, has been incorporated with a share capital of $100,000. It will take over the patent rights of G. A. Bothwell and A. G. MacKay, of Owen Sound, in certain locomotive improvements and manufacture and deal in the same.

At a committee meeting of the Ontario Legislature it was stated by Hon. Mr. Cochrane that he had seen specimens of anthracite coal which were discovered north of the Height of Land in Ontario, and he proposed that the Government should be given power to withdraw lands containing such for the public benefit.

Plans are being made by the Park and Island Railway Company, of Montreal, to bring into direct communication with the city several towns and villages within fifty miles or so. The company is now applying to the Dominion Parliament for the necessary authorization. It has already taken advantage of all the clauses in its present charter in respect to extensions.

Universal Systems, Limited, Toronto, is the name of a company recently organized under Ontario charter for the object of manufacturing or otherwise acquiring office and store furniture, supplies and specialties, time and labor-saving devices, magazine and loose-leaf binders, time stamps, adding machines, etc. S. F. Smith and F. Asa Hall, of Toronto, are among the provisional directors.

Coppers, Limited, is the name of a newly organized company chartered by the Dominion Government with the object of purchasing, taking on lease or otherwise acquiring mines in Canada, and exploring and developing the same, smelting ore and preparing it for market, buying and dealing in minerals, plant, machinery, etc. The capital stock is placed at $2,000,000. Wm. Inglis, of Toronto, and James Playfair, of Midland, Ont., are among the charter members.

A Montreal druggist, named T. E. Gagner, has made a private assignment to the representative of a leading firm of creditors, who will liquidate the estate and divide the proceeds pro rata as realized upon. Gagner had a good stand and an active business, but he has "spread himself around" promiscuous-like, and has been very unmethodical in keeping track of his affairs. He has a proprietary interest in a drug business carried on in St. Hyacinthe under the style of La Pharmacie Ostigny, and he is also reported to be interested in the California Wine Co., etc.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST EAST TORONTO.

Mercantile Summary.

"It may be true," said Uncle Eben, "dat hard luck is sometimes a blessin' in disguise. But I never did care much 'bout dese hyur masquerade parties."—Washington Star.

No cheating nor bargaining will ever get a single thing out of nature's "establishment" at half price. Do we want to be strong?—we must work. To be hungry?—we must starve. To be happy?—we must be kind. To be wise?—we must look and think.—Ruskin.

Mr. Wholesale—"Your former employer tells me you were the quickest bookkeeper in the place. Young Applicant (dubiously)—"Does he?" Mr. Wholesale—"Yes. He says you could throw the books in the safe, lock up, and get ready to go home in just one minute and ten seconds."

The annual examinations of the Institute of Chartered Accountants of Ontario will be held in Toronto on May 21st, 22nd and 23rd. The last day for receiving applications is Monday, April 30th, forms for which may be obtained by addressing the secretary at the Institute offices, 27 Wellington Street East, Toronto.

It is understood that the Turbinia Steamship Company, of Hamilton, has been reorganized, with the Eatons, of Toronto, holding a large interest. The steamship "Turbinia" has been during the winter on the route between Cuba and Jamaica, but it is now on its way to Ontario to resume the service on the Toronto-Hamilton route.

The assignment is noted of L. V. Tasse & Co., who began the grocery business in Montreal two or three years ago with little or no experience. The account has never been regarded a very satisfactory one.—Dawson, Brown & Co., of the same city, in business about a year as dealers in flour and feed, have assigned, owing $1,575, and not having the ready with which to pay.

A beacon light in his way is J. B. Legault, of Ste. Genevieve, a country parish on the Island of Montreal, who succeeded his late father-in-law in a moderate grocery business about two years ago. He has proved unsuccessful, and has assigned to A. Desmarteau, Montreal. He shows assets of only $600 to pay liabilities of $2,100. What became of the discrepancy or why he comes to owe so much are questions which his assignee will have a chance to find out.

A voluntary assignment has been made to V. E. Paradis, accountant, Quebec, by Joseph Danjou, general dealer, at Rimouski. His statement shows assets of about $1,600 and liabilities of $2,330. Mr. Danjou is now an elderly man, who has been many years a merchant in the district, but not very successful. He failed at Ste. Luce some years ago, and has in consequence done business under the names of two of his sons at various times. His trade has been of a limited character of late years.

Mercantile Summary.

Theodule Leroux, operating as a general merchant and butter manufacturer at St. Armand Station, Que., whose failure we lately noted, is offering 35 cents on the dollar, payable half cash, the balance on short time.—H Rousseau, of St. Francoise, Que., has arranged to pay 40 cents.—M. Coulombe, of St. Leon le Grande, Que., another recent insolvent, is now offering 40 cents in the dollar, cash.

We hear from Prince of Wales' Island that in a run of seventy days recently the Brown-Alaska smelter at Hadley treated 25,000 tons of copper-gold ore, the output of matte being valued at $250,000, an average value of $10 per ton. A large amount of the output of the Britannia mines on Howe Sound is being smelted at Hadley, the ores of that district being well suited, it is said, for fluxing purposes.

It was stated that some time ago the Scottish Wholesale Co-operative Society had acquired 100,000 acres of land in the Province of Saskatchewan. This, it is now explained, was not altogether accurate, as the society only has so far an option on that extent of land. What it wants is to have some certain source of supply of wheat, which is often held by speculators to the detriment of the society. The latter grinds some 72,000 bushels of wheat per week, of which at least 50,000 might be Canadian.

The failure is reported of McLennan Bros., dealing in groceries, crockery, etc., at Stellarton, Nova Scotia, who succeeded the firm of Cunningham & McLennan in September, 1904. Overbuying of goods and giving of too much credit have cramped them, and they have been found dilatory in settlements for some months past.—A dry goods dealer of Sydney Mines, N.S., named Chas. F. Butts, is reported embarrassed and seeking compromise indulgence from his creditors. He is said to owe about $5,500.

Intelligence has come to us from Nova Scotia that the firm of Sweet Bros., general dealers, at Goldenville, N.S., are offering 40 cents on the dollar. Our informant says: "The business has never been a very active one, and the firm have been more or less dependent on the custom of the men working in the gold mines thereabout, which have now been shut down for some months. Last fall they were reported as obtaining a general extension." We find ourselves wondering whether this description of gold mines shutting down can possibly apply to the quartz mines at Goldboro', in the same county, about the extraordinary richness of which in quartz gold (which we had dared to doubt) a director of the Beaver Hat gold mine wrote us indignantly in May last. But we find that Goldenville is on Wine Harbor and Goldboro' on Isaac's Harbor, in the same county, but a dozen miles away. So we hope the Beaver Hat is still pouring out its phenomenal richness.

Mercantile Summary.

The world's yearly use of postcards is enormous. Germany uses 1,161,000,000, the United States 770,500,000, Great Britain 613,000,000. As to letters, however, the United States is far ahead of all other countries. The total number of letters posted in the last-named country during 1903 was 4,109,000,000.

The Globe Furniture Company, of Walkerville, Ont., has removed into its new factory, built right alongside the old one. This new factory, we are told, has twice the capacity of the old, and will enable the company to handle more adequately a growing business. The dimensions of the new building are 50 by 170 feet, and it is fully equipped with new and modern machinery. A sprinkler leakage system has also been installed throughout for protection against the ravages of fire.

Word comes from Ottawa that the James Bay Railway Company will seek authority this session to build branch lines to Key Inlet, on the north shore of Georgian Bay, near French River, and to a point in the township of Hutton and northward to connect with the N.T.R.

Several hardware dealers in different parts of the Province of Ontario met together the other day and organized a body which will be known as the Retail Hardware and Stove Dealers' Association of Ontario, with Mr. A. W. Humphreys, of Parkhill, as president, and W. Wrigley, of Toronto, as provisional secretary. The object of the organization is to help retailers in the maintenance of prices and the collection of debts.

Ontario bakers and millers want a testing plant to show the quality of various grades of flour, and are asking the Government to establish one. Wheat and flour, it is contended, have been so variable in recent years that it is impossible to know what to expect in the product from them. Sometimes the flour of one section is lacking in gluten, but is greatly improved by addition of a sample from some other section containing that ingredient more prominently. A testing station, it is claimed, would permit of this being done. It will be remembered that a good deal of complaint has come from Great Britain as to this very lack in some Canadian flours, and no doubt something of the sort proposed would afford a means for preventing this.

Col. J. H. Conrad, who discovered what are alleged to be large and valuable deposits of silver on the shores of the Windy Arm River, in southern Yukon, has been successful, it is understood, in obtaining sufficient capital to go on with the work of development on an extensive scale. A large smelter is among his plans, and if the White Pass and Yukon Co. does not carry out its present intention of constructing a branch line to Conrad City, the seat of the finds, the colonel proposes to build one himself.

Shipments of ore from the Yale-Kootenay mining region of British Columbia last week amounted to 30,970 tons. For the year up to April 20th the total was about 475,000 tons. The shipments from the Boundary mines were 23,123 tons—from the Granby, Mother Lode, Rawhide, Emma, Sunset, Brooklyn, Skylark and Strathmore, the last-named a new mine. From Rossland the shipments were 7,140 tons—from the Le Roi, Le Roi No. 2 and Centre Star-War Eagle. From Slocan-Kootenay the shipments were 2,216 tons, a record for this year—from the St. Eugene, Sullivan, La Plata, Eureka, Hunter V., Black Prince, Broadview, Ottawa, Lone Bachelor, Queen, Kootenay Belle, Sally, Second Relief, North Star, Whitewater, Ruth, Emerald, Majestic, Aurora, Silena and Queen Dominion, the last three being new shippers. The ore receipts at the smelters were: Granby, 14,068 tons; Dominion Copper, 4,373; B.C. Copper, 4,564; Trail, 6,770; Hall Mines, 761; Marysville, 500 tons.

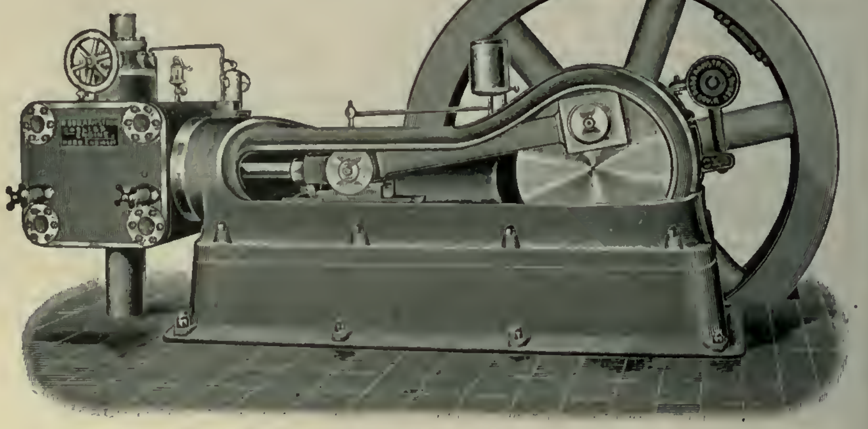
Mortgages for Sale

The Northern Trusts Company are prepared to receive tenders for the purchase of all or part of the mortgages assigned to them by the Canadian Co-operative Investment Company, amounting to $183,291.00. These Mortgages are not interest-bearing, and are repayable by monthly instalments, the monthly receipts from this source being $1,497.00 A list giving all possible particulars is now being prepared and may be inspected after May 1st. Tenders will be received up to the 15th May next. The Northern Trusts Company does not bind itself to accept the most favorable or any tender.

For fuller particulars and conditions of sale, apply to

THE NORTHERN TRUSTS COMPANY,
Corner Princess St. and Bannatyne Ave.,
Winnipeg, Man.

NOT ONE CENT FOR REPAIRS



An experienced engineer has written us as follows: "After eighteen months of hard service, the 'Robb' engines are in excellent shape, running very smooth and without a bit of vibration. Up to this time, they have not cost one cent for repairs, the only expense being steam, oil, and packing, and this below the average. Perfect alignment, parts well machined and good design make the 'Robb' the most economical and labour saving engine that has ever come to my notice."

Mercantile Summary.

The sale of the Mexico Electric Railway Company to the Mexican Light and Power Co. has been confirmed. Both corporations are financed by Canadian capitalists.

Canada's foreign trade returns for the nine months of the fiscal year ending with March show a total trade of $396,859,305, an increase over 1905 of approximately $56,000,000.

The contract for grading the Canadian Northern Railway's branch from the main line to Pas Mission, on the route to Hudson Bay, has been let, it is reported, to James Cowan, of Winnipeg. The line has been located as far as the head waters of the Churchill.

A despatch from Ottawa states that the Government has decided to put an end to six or more hydraulic leases in the Yukon on account of the concessionaires failing to carry out the terms of the lease. Other companies have been informed that if they do not fulfill their obligations this year they also will forfeit their leases.

It is proposed by the Western Ontario Retail Coal Association to have that body include the coal men of the entire Province instead of Western Ontario only, and to ask for incorporation. The association at a meeting in London last week re-elected Mr. Hay, of Listowel, president, and W. Heaman, of London, vice-president. A. J. McIntosh, jr., of Woodstock, was elected secretary. It will in future be known under the name of the Canadian Retail Coal Association.

The Richelieu and Ontario Navigation Company anticipates a more than usually brisk season on the St. Lawrence, and, in readiness for it, has been spending large sums of money in practically rebuilding several of the older steamers of the line and in making improvements to newer ones. During July and August the service between Toronto and Montreal will be a daily one, while on most of the other routes it will be increased and improved.

The humorist of the Golden "Star," of Golden, B.C., has the following: "The Velvet-Portland mines, near Rossland, idle for over two years, are to be re-opened in a few days. These mines are owned by an English syndicate, and it would take million-dollar-ton ore to make them pay. When working the company employed fifteen miners and sixty-two office men. The mines are located on a high hill. A lawn tennis court was built at the works. There wasn't enough level ground, so they piled the side of the hill and made a court out of three-inch plank. This is one mine that paid ping-pong dividends, although probably one of the richest mines in British Columbia."

The Grand Trunk Railway Company propose, in addition to their usual addition to rolling stock of thirty locomotives per annum, to purchase fifteen new ones in order to keep pace with the growing demands of the service. The normal life of a locomotive in this country is about twenty years, and the normal rate of replacement by the Grand Trunk is about fifty per year.

Several small buildings, including a public hall, were burned down a few days ago in Grandview, Man. The loss altogether was about $12,000. There were also several other minor losses in various parts of Ontario. At Omemee the Bradburn House was discovered to be on fire, and the loss before it could be extinguished was $6,000, covered by insurance. At Exeter, Levett & Rollins' grain warehouses were destroyed. J. Radford's saw-mill at Ingersoll was burned, there not being any insurance.

OUR TRUCKS are fitted with rubber tires that do not come off. . . . .

AGENTS WANTED in every unrepresented District in Canada.

Debentures for Sale

The undersigned is prepared to receive tenders for the purchase of debentures of Drainage District No. 5 in the Province of Manitoba to the amount of $162,000.00 and of Drainage District No. 15 in the said Province to the amount of $22,000.00, said debentures being in denominations of $1,000.00 each, dated July 1st, 1906, payable in thirty years from the date thereof at the Union Bank of Canada, in the City of Montreal, and bearing interest at the rate of 4% per annum, payable half-yearly. These debentures are issued under the provisions of "The Land Drainage Act," and are guaranteed by the Province of Manitoba.

Tenders will also be received for debentures of the Central Judicial District in the said Province to the amount of $22,000.00, dated July 1st, 1906, payable on January 1st, 1924, at the Union Bank of Canada in the City of Montreal, and bearing interest at the rate of 4% per annum payable half-yearly.

All offers must be addresed to the undersigned, and marked "Tender for Debentures," and must reach this office not later than the 1st day of June, 1906.

Delivery and payment of debentures to be made in Winnipeg.

J. H. AGNEW,
Provincial Treasurer.
Provincial Treasurer's Office,
Winnipeg, Man.

JAPANESE INDUSTRIES.

Mr. Alex. MacLean makes an estimate of the state of the manufacturing industries in Japan, and notes the changes which have been made in the classes of goods for export during the last ten years. During 1904 the value of manufactured goods exported amounted to $35,700,000; that of commodities manufactured in part to $72,350,000; and that of raw products to $19,750,000. Compared with the conditions ten years ago, the value of raw products shows an increase of 92 per cent., while the increase in the value of manufactured goods is 216 per cent., and of articles partially manufactured 172 per cent.

During the period of such remarkable growth in industry, the management of factories, with a few exceptions, seems to have made but little advancement. The total number of factories in operation last year was 8,274, of which 3,741 were using motor power. Compared with the preceding year, the number of factories using motor power showed an increase of 38 per cent.

Factories using steam power numbered 2,205; those using water power, 1,004; those using both, 107; electric power, 86; those using gas, 123; those using oil engines, 165. It is noted that the factories using both steam and water power are on the decrease. The large number of factories using water power is explained by the fact that ordinary water mills, used for cleaning rice, are included in the statistics. Their number is, however, also decreasing, as electric motors with water as the source of power are gradually coming into use.

The total number of operatives employed in the factories throughout the country was 483,839 at the end of 1904. Of this number, 182,404 were males and 302,435 females. Of the male operatives, 173,820 were above 14 years of age, and 8,584 under 14 years; and of the female operatives, 269,051 were above 14 years. The majority of the females are employed in spinning and weaving, which are among the principal Japanese industries.

He says that manufacturers who may be looking forward to improved tariff conditions between Canada and Japan should make a note of it, that special preparation in respect of quality, package and packing of goods is required for this market. The agents of trading firms are especially urgent upon this point when reporting to their principals, whether in Europe, the United States, Germany or elsewhere. They may rely upon it, that what people in Japan are accustomed to handling and using must be considered. At the bottom of this requirement is the fact that the Orientals are people of strong prejudices, and it is useless to furnish them with something which we may think it better than what those people are using. Importers here will give instructions as to what will be acceptable to themselves and to their clients, and these instructions must be carefully observed.

TORONTO MARKETS.

Toronto, April 26, 1906.

Drugs, Chemicals, etc.—There is no special feature in the market this week. Prices remain much as last reported, with values, generally speaking, steady. Opium and quinine are in moderate request. Trade in the country districts shows more activity. In New York the market for general drugs is dull.

Dry Goods.—Since the upward movement in several lines of cottons business has been quite brisk. The demand seems unable to keep itself quiet any longer, stocks having been allowed to fall rather low. Dress goods of all the lighter characters are in keen demand, and business in all seasonable lines is being helped by the bright spring weather Travellers' reports are uniformly favorable. Payments have been generally satisfactory.

Flour and Grain.—Not much business is passing in local markets under this heading. Prices for wheat are as a rule a little higher. Oats and rye have also gone up. Ninety per cent. patents fetch $3.10 to $3.15, but there is not much export demand.

Groceries.—A good movement is going on in all branches. All grades of sugar made another drop in price on Wednesday morning. The demand is about average. The position of canned fruits and vegetables continues very strong Tomatoes, quoted now at $1.30, are in good request. Dried fruits are also on the strong side. There is nothing new under the heading of teas and coffees, though there is a good deal of speculative movement in the primary markets for the latter. Almonds are very firm in sympathy with the reports of damage in the growing centre. Rice and tapioca also are in quite a strong position.

Hides and Leather.—Although no further advance has taken place as yet, one is looked for before long, and prices are very firm. In the meantime not very much business is passing. The demand for leather is increasing quite rapidly. Values continue unaltered, but the feeling of the market is good.

Live Stock.—The supply of cattle at the Toronto and Junction yards this week was moderate and enquiry quite active. For choice butchers' cattle there was a very good demand, and everything answering to that description was cleared out early. Exporters were steady. The call for stockers and feeders is expected to begin very shortly in earnest. A better tone developed in sheep and lambs, but not many were offering.

Provisions.—Butter is in more plentiful supply, and as a result prices have a lower tendency. New cheese is offering in the local market at 13c. Old continues firm at about 14c. New-laid eggs range from 15½ to 16c. Not much other stock is in the market. Poultry is scarce, with little demand. All pork products are very firm.

Seeds.—Prices for all lines are extremely firm, and the market a brisk one. Red clover is about $13 to $15 and other lines in proportion.

Wool.—Little actual trading is being done, but new clip in large quantities is expected in a week or so. So far as can be seen at present, values will hold much as they were last year.

Again the Directors of the Great-West Life Assurance Company are able to state that not one dollar of Principal or Interest has ever been lost on investments since the formation of the Company.

(Vide Annual Report for 1905.)

Great-West Policyholders may invariably depend upon the most careful and conservative management of the funds entrusted to the Company.

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

MONTREAL MARKETS.

Montreal, April 25, 1906.

Ashes.—There is still an absence of demand, and quotations are barely steady at $5.17½ to $5.20 for No. 1 pots; second pots, about $4.70; pearls, $7.25 per cental.

Cements and Firebricks.—Now that outdoor work of all kinds is general there is a good, steady demand for cements. We quote: Belgian, $1.75 to $2, as to quality; English, $2 to $2.10; Canadian, $1.80 to $2. Firebricks are steady at $18 to $23.

Dairy Products.—Receipts of new butter and cheese are steadily increasing, and there has been a notable decline in values since a week ago. For finest creamery butter 20 to 20¼c. is now an outside figure, while fresh dairy is quoted at 17 to 17½c. New fodder cheese is quoted at 11¼ to 11½c for fine white, and 11½ to 11¾c. for fine colored.

Dry Goods.—There has been an improvement in city retail trade since last writing, and payments from this quarter are coming in well. Of general sorting business wholesalers report a fairly good volume. The Trent Valley Woolen Co. advise an advance in their tweeds, etc., equal to about 10 per cent. The close season for domestic prints, during which the wholesale trade are bound to sell at a fixed price, closes on May 1st.

Groceries.—The movement at the moment is not of a particularly brisk character, but with the opening of the canals next week there will likely be a freer distribution. The sugar market has undergone another sharp decline, refiners having announced a second cut of 10c. a cental on all grades, making the present factory figure for standard granulated an even $4, in barrels, and $3.95 in bags; yellows range from $3.55 in bags upwards. Molasses, however, is firmer. Advices from Barbadoes indicate that the make is pretty well contracted for, and first cost is advanced to 16c. equal to about 26½c. cost laid down here. The present jobbing figure is 28c. A large steamship cargo is due here early in May. Teas continue in somewhat slow demand. All kinds of canned goods are very firmly held; $1.20 is asked for tomatoes, with the probability of further advance; corn is still sold at 85c.; gallon apples, $2.50. Spot supplies of tapioca are very low.

Hides.—The week has developed little new in this line. Dealers still quote 11c. for No. 1 beef hides, 13c. for No. 1 calfskins, and 10c. each for lambskins.

Leather.—Boot and shoe manufactureres are not very free buyers at the moment, but all leather values are very firmly held. We quote: Manufacturers' No. 2 sole at 24½ to 25c.; slaughter, 28 to 29c.; Western splits, 27 to 28c.; Quebec ditto, 20 to 22c.; buff and pebble, 14½ to 16½c.; Scotch grain, 17c.; harness, 32 to 34c.; chrome calf, 24 to 25c.

Metals and Hardware.—A brisk business continues to be reported in these lines, and values all rule towards the firm side. Ingot tin has developed further pronounced strength, and the local jobbing figure has advanced to 44c., a figure previously unknown to the present generation. It is only reasonable to suppose that tinplates will be affected, and, though local quotations in these goods are as yet unaltered, it is reported that some agents for British makers have received cable instructions to withhold quotations until further advised. Antimony has now got up to 24c., with hardly any available stock here; lead, $4.35 to $4.40; copper, 20 to 20½c.; zinc, 7c. There is not much doing at this season in pig iron; best Scotch brands are quoted at about $21.50, for delivery by first arrivals from sea. Bars are steady at $2 to $2.05; nails, wire, etc., remain at old figures. Plates and sheets of all kinds also stand at old figures. Shovels of fourth grade are advanced $1 per dozen.

Oils, Paints, etc.—All the houses in this line report continued good business, and apparently expect the demand to continue well into the summer. Linseed oil is steady at 54 and 57c. for raw and boiled, respectively, in ordinary jobbing lots. There is some expectation of a decline in turpentine, which is still quoted at 95c. per gallon, in single barrels. Stocks of glass are not at all full, and $4 is firmly asked per 100 feet for first break. Leads, putty, etc., are firm at late quotations.

Wool.—Millmen are just buying "hand-to-mouth" parcels, but have to pay full figures, and there is no sign of any weakness in the market. We quote: Capes, 19 to 23c.; fine B.A., 44 to 45c.; medium ditto, 38 to 40c.; domestic pulled, 29 to 30c.

* * *

A valuable discovery of gold is reported by a man named Quebel on the Montreal River, near Latchford, Northern Ontario. It is in quartz, the vein being said to be four feet in width.

"The Unexpected Always Happens."

Who is there but has had brought home to him the truth of the above statement? It is always the accident that was least looked for that actually does occur. Nobody is immune from accident. Your experience and observation confirm that fact.

WISE men prepare for such emergencies by carrying an accident policy. The WISEST men see to it that that policy is an Employers' Liability Combination Policy, issued by

THE INSPECTION OF FOOD.

Mr. Anthony McGill, Analyst to the Dominion Government, gave a lecture before the Ontario Grocers' Convention in Toronto a few days ago in which he made some strong pleas for the national control of food supplies.

If it were necessary to justify food inspection as a national concern, the following, among other considerations, might be given: First, the great importance of the subject; the national health and well-being are directly menaced by any lowering in the quality of its food material. Second, the necessarily high cost of such inspection, because expert skill must be employed, if the work is to possess any value. Third, the benefits of inspection should be equally available to the poor and the rich. It is equally to the interest of the whole commonwealth that the working classes should be properly nourished. It is not only the rich man who should be safeguarded in the character of the food stuffs offered for sale. Fourth, a continuous inspection must be provided in order that the quality of our foods may be known. We cannot afford to wait until a lowering of national vitality indicates something wrong. We need to prevent widespread harm, not to discover and account for it after the fact.

The Canadian Act affecting adulteration defines the latter as follows:

1. If any substance has been mixed with an article so as to reduce or lower or injuriously affect its quality or strength;
2. If any inferior or cheaper substance has been substituted, wholly or in part, for the article;
3. If any valuable consistent of the article has been wholly or in part abstracted;
4. If it is an imitation of, or is sold under the name of another article;
5. If it consists wholly or in part of a diseased or decomposed or putrid or rotten animal or vegetable substance, whether manufactured or not, or in the case of milk or butter, if it is the produce of a diseased animal, or of an animal fed upon unwholesome food;
6. If it contains any added poisonous ingredient which may render such an article injurious to the health of a person consuming it;
7. If its strength or purity falls below the standard, or its constituents are present in quantity not within the limits of variability, fixed by the Governor-in-Council, as hereinafter provided;
8. If it is so colored or coated or polished or powdered that damage is concealed, or if it is made to appear better or of greater value than it really is.

The chief ground of complaint rests in the non-acknowledgement of the presence of a foreign substance. The importance which this assumes depends greatly upon the point of view. To the consumer it means that he is ignorant of what he eats. This is always a perfectly tenable ground for complaint. It frequently amounts to a very serious matter, indeed, as in cases where personal idiosyncrasy or invalidism prohibits the use of certain classes of food. To the honest manufacturer it is a very heavy grievance, since it means unfair competition.

To the producer it is also a ground for complaining. What of the fruit grower who finds apple, turnip or other pulp used as a basis for jams, sold as strawberry, raspberry, plum, etc., and dyed with coal tar colors to imitate the genuine fruit? Just in the same way has the dairy farmer a right to complain of unacknowledged competition by the sale of oleomargarine or renovated butter for the genuine article; the farmer who raises pigs has a bona fide grievance when cotton seed products are substituted for lard, and so on.

* * *

THE IRON AND STEEL MARKETS.

Whether the buying of pig iron this past week simmers down into early dullness, or whether it develops into a vigorous and tenacious trading, there is certainty that the improvement in enquiry extends practically to the entire country. The early subsidence of the demand or its growth into proportions of great magnitude depends mainly upon the decision to be made by the consumers as to whether this is the proper time to buy for the requirements of the last half of the year. The present activity in pig iron has been forced by the scant stocks in possession of the users. This is shown by the great generality of the purchases, the buying movement affecting all classes of consumers.

The opinion seems to be held by both buyers and sellers that pig iron prices are high enough. The buyers have entertained hopes that quotations might be lower. A sort of support to that view is given by the fact that quotations for the last half of the year have in some instances been lower than for immediate delivery.

What will happen in regard to prices for the last half of the year will depend largely upon the volume of enquiry to develop and the rate at which iron continues to be specified. Pig iron has certainly withstood remarkably well the neglect of buyers during the past several months, and any marked expansion in demand would be tonic in its effects. There are indications that the order books of some of the Eastern furnaces are in much better shape than they were a few weeks ago. In regard to prices for Southern products, the $14 quotation seems to have been arrived at by agreement, and for that reason possesses more or less artificiality, from a supply and demand standpoint. But some of the smaller furnace interests, not counselling in the deliberations concerning values, have been advancing their figures this week from $13.75 to $14. All told, the pig iron market looks stronger, though with main dependence upon the coming buying.—Iron and Machinery World.

* * *

For the year 1905 the exports of coal and coke from the United States reached a total of 9,800,000 tons, valued at over $31,000,000. The exports of anthracite coal were 2,229,983 tons, valued at $11,104,654; of bituminous coal, 6,959,265 tons, valued at $17,867,964; of coke, 599,054 tons, valued at $2,243,010. Almost all the exports of anthracite coal were to Canada, and over two-thirds of those of bituminous coal. The exports have practically doubled since 1895. The distribution of coke exports is not given in the Government statistics, but such shipments are largely to Mexico. Great Britain exports about five times as much coal, and Germany about twice as much as the United States.

DEBENTURES
FOR SALE.

Sealed tenders marked "Tender for Debentures" will be received by the undersigned up to 5 o'clock p. m. on Friday May 18th next, for the purchase of $132,410.26 of City of London four per cent. Local Improvement Debentures.

Forms of tender giving full particulars of the debentures can be secured on application to City Treasurer.

The highest or any tender not necessarily accepted.

JOHN POPE,
City Treasurer.
JOHN FORRISTAL,
Chairman Finance Committee.

ESTABLISHED 1858.

Managers and Underwriters.

An advance copy of the report and accounts of the Alliance Assurance Company, Limited, of London, submitted at the annual general court, held in London the other day, shows that the assets of the company amount to £12,238,997, and that during the past year dividends and bonuses, including an interest balance, have been paid amounting to £246,981, while the balance carried to the credit of profit and loss account is £468,337. It is further stated that the general court will declare a dividend and bonus of 6s. per share, payable on and after July 5th next, on any shares which have been alloted to the members of the Westminster Fire Office in lieu of cash under the agreement dated November 24, 1905, between that office and the company. The Alliance, which conducts fire, life and marine insurance business, has been absorbing other companies to a considerable extent of late, but does not seem to have taken anything indigestible, judging from its balance sheet. Its authorized capital is £5,450,000 and the amount paid up £812,855.

The Crown Life Insurance Company

Head Office: Toronto, Canada.

Offers These Advantages to Insurers:

Lower Premium Rates than those charged by most other Companies.

FINANCIAL MATTERS IN THE STATES.

Henry Clews' weekly letter says, under date New York, 21st April:

The shock resulting from the San Francisco calamity has been well resisted by the stock market, but must nevertheless in the long run exert a depressing effect. The chief weight of the disaster will fall upon an already much strained money market. Millions will be required to make good the losses and for rebuilding the city; considerable funds having already been sent westward, with more to follow. As a result currency, which ordinarily comes to New York during the next few weeks, will be retained at the West, and the chances for easier money rates are still further diminished by this catastrophe. San Francisco will unquestionably be promptly rebuilt, and on a grander and more substantial scale than in the past. The opportunities of a growing commerce both at home and with the Orient are altogether too magnificent and enticing to be withstood. American enterprise will quickly come to the rescue, and San Francisco, like Chicago, Galveston and Baltimore and Boston, will ere long rise to a prouder position as a Pacific Coast city than ever before. On the Stock Exchange there was more or less recession in values, particularly among the Pacific railways and Pacific Coast securities.

The fear that stocks may be freely and immediately sold by insurance companies to meet losses should not receive too serious consideration. Such losses are first paid gradually out of funds in bank or by means of temporary loans, insurance companies not being in the habit of sacrificing securities when it is better financing to borrow. Most of our insurance companies are strong and perfectly sound institutions, and no serious embarrassments to them are to be anticipated, unless in one or two possible instances. The losses upon mercantile and industrial establishments will, however, be heavy, and possibly disastrous in some cases. The occasion is one, therefore, that will call for all the consideration and patience that our bankers and financiers can extend toward a distressed community. The California banks, although most of their buildings have been destroyed, will not lose the money in their vaults, which aggregates about $100,000,000, all being in gold.

* * *

THE GROWTH OF FISH.

It may interest those who watch the growth and development of fish on our Atlantic and Pacific coasts to be told that temperature has everything to do with the growth of piscatorial life. In a fish the body heat varies with the heat of the surrounding water. In cold water a fish becomes cold, in hot water it becomes hot, and a certain amount of heat is required for the chemical processes in the body, one result of which is growth. Thus digestion of food is arrested when the temperature of the water sinks near the freezing point, and the fish gives up eating. It follows that in winter when the temperature of the water falls—and it is especially marked in fresh water, as streams and lakes—growth ceases, and the fish may in some cases bury themselves and hibernate. All animals, it may be said, except birds and mammals, are influenced in the same way by temperature, and their growth is thus subject to the variation of the seasons, and is periodic. In the sea the growth of all living things except the mammals —cetaceans and seals—depends on the temperature of the water. In regions subjected to the influence of the seasons, as near the coast, growth goes on in summer and is retarded or ceases in winter, and one may see the marks of the periodicity elsewhere than in the skeleton of fishes—for example, in an oyster shell. A female plaice about 15 inches in length, that is to say at the size when she first spawns is five years old. Growth after this is slower, so that a plaice at 25 inches or 26 inches is 20 years old or more. Herring, which spawn when 3 years of age, are about 7 years old when 12 inches in length. A flounder of 16 inches is 8 or 9 years old. A cod of 30 inches is at least 7 years of age, and one of about 40 inches from 9 to 11 years. Among fresh water fishes which have been kept under more or less close observation some very old fellows are recorded, but their age was not demonstrated by any scientific method.

* * *

—Edward Everett Hale was one of the guests at a millionaire's dinner. The millionaire was a free spender, but he wanted full credit for every dollar put out. And as the dinner progressed he told his guests what the more expensive dishes cost. He dwelt especially on the expense of the large and beautiful grapes, each bunch a foot long, each grape bigger than a plum. He told down to a penny what he had figured it out that the grapes had cost him apiece. The guests looked annoyed. They ate the expensive grapes charily. But Dr. Hale, smiling, extended his plate and said: "Would you mind cutting me off about $1.87 worth more, please?"

Mercantile Summary.

Messrs. Compeau & Leduc, of Vancouver, are erecting a sawmill at Hazelton, B.C., on the Skeena River.

A McGill University school party of mining students left last week for Nova Scotia and Newfoundland, where they will spend about six weeks studying practical mining work, and gaining, no doubt, invaluable experience.

The retail merchants of Toronto Junction met together on Wednesday and formed a branch of the Retail Merchants' Association of Canada, with several trade sections. The officers elected were the following: President, W. J. Sheppard; first vice-president, J. C. Willard; second vice-president, Thos. Padget; treasurer, Alex. Chisholm; secretary, W. H. Baldwin; auditors, W. W. Howell and F. B Hope. The chairmen of the trade sections are as follows: Grocers, M. J. Tobin; druggists, W. W. Howell; hardware, F. B. Hope; merchant tailors, A. M. Gabel; dry goods, W. R. Sheppard; boots and shoes, Alex. Chisholm; jewellers, A. C. Stanners; butchers, Geo. E. Brown; books and stationery, W. H. Baldwin; tobacconists, Barber Agin; bakers and confectioners, W. C. Robinson.

The Metropolitan Life Insurance Co.

(INCORPORATED BY THE STATE OF NEW YORK)

The Company OF the People, BY the People, FOR the People

ASSETS, $151,663,477.29

Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec, Ottawa.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395	per day in number of Claims Paid.
6,972	per day in number of Policies Issued.
$1,502,484.00	per day in New Insurance Written.
$123,788.29	per day in Payments to Policy-holders and addition to Reserve.
$77,275.94	Per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave., New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $3,0000,00.00

A Policy-Holder's Company

The North American Life Assurance Company has a Guarantee Fund of $300,000, of which $60,000 is paid up in cash. Interest is allowed on this paid up portion only. Policyholders thus obtain **additional security of $300,000** and what is of greater importance, are **assured of careful and conservative management** as the Guarantors are liable for this amount. By the Company's Act of Incorporation, every holder of a participating policy in the Company, upon which all premiums due have been paid, shall have one vote in person for each $1,000 of insurance held by him. Policyholders are thus given a **voice in the management** of the Company's affairs. In short, it may be said that the North American Life is neither a Mutual nor a Stock Company yet **possesses the advantages of both.**

POWER FOR EASTERN ONTARIO.

The Hydro-Electric Power Commission has now issued its second report. Its first report dealt with the transmission of power to the southern and western parts of Ontario; this one with the River Trent or eastern section of the Province. It estimates that on the Moira River and its tributaries, and on the upper and lower Trent, about 65,675 horse-power can be obtained, of which some 17,015 horse-power has been developed already. On the lower Trent, the Commission figures that there are five powers capable of being fully developed for long-distance transmission. These are Healey's Falls, 8,000 horse-power; Middle Falls, 5,200 horse-power; Ranney's Falls, 6,100 horse-power; rapids above Glen Millar and rapids above Trenton, 3,200 horse-power each, a total dry-weather capacity of 25,600 horse-power. To insure economy a combined development would be necessary.

From these five powers energy might be transmitted from Healey's Falls to Brighton and to Whitby on the west and Kingston on the east. Oshawa and Kingston are selected by the Commission as typical points and the charges and costs figured out for these municipalities. Oshawa drawing from Healey's Falls with a full load of 1,825 horse-power, at a power-house cost of $13.35, would pay $21.52 at sub-station and $26.30 at customers'. At half load of 912 horse-power the costs are figured at $12.87, $27.29 and $37.06 respectively At Kingston, for which the stepdown and sub-station losses are slightly higher, the rate at sub-station for full load of 2,750 horse-power is $21.43 and $26.15 at customers'. The half load rates are $26.85 and $36.29. These figures include all necessary construction, transmission lines, rights of way charges and other expenses.

The cost of developing the five larger falls is estimated at $2,295,000, or $84.38 per horse-power at Healey's Falls, $91.37 for Middle Falls, $69.67 for Ranney's Falls, $109.38 for the rapids above Glen Millar, and $115.63 for those above Trenton.

A private right of way is provided for in the estimates, 66 feet wide, from Healey's Falls to Brighton, and of a varying width along the Grand Trunk Railway from this point to Whitby on the west and to Kingston on the east. The following line construction is provided for:—Double-circuit steel towers from the power-house to Brighton, single-circuit steel towers from Brighton to Deseronto Junction (the name given to the point where the Deseronto and Marlbank lines branch off), and high-class wood pole construction from Deseronto Junction to Kingston, and from Brighton to Whitby.

As the larger proportion of power sold is required for ten hours per day only, an arrangement of "limited hour contracts" is proposed for the winter, whereby certain motor users will agree to shut down between 4.30 and 6 p.m., so as to allow the full power to be utilized for lighting purposes.

We may state that as was the case with the Commissioner's first report, dealing with western and southern Ontario, its statements and calculations have not been allowed to go unchallenged. A correspondent of the "Globe" writes to say that the Commissioners have scarcely been in a position to deal accurately with the Trenton water-powers, and with those above that place. He states that during the past winter the water-supply has been abnormally good, and that if observation were to be made during the whole year, some very different calculations would have to be made, and widely different conclusions must be arrived at. There is very great variation between the maximum and minimum flow of the river, and this has not been allowed for. As a matter of fact, although the report places the amount of water-power available at Trenton at 2,500 horse-power, there are already two users of the power to the extent of 900 horse, and these users, we are told, have been put frequently to so much inconvenience by the insufficiency of the water supply that they are both putting in extensive steam plants to supplement the power they obtain from this source.

HARDWARE AND METALS.

There are several features of interest in the metal markets. Antimony, which has held a steadily strengthening position for some weeks past, has made another advance of a cent, and now it is quoted at 21 to 22c., and sometimes 22½c. Babbit is very unsettled, but prices have a strongly advancing tendency. Tin is another article showing great strength, and ingots have advanced during the last fortnight. Plates remain unchanged so far. The quotation prevailing now is 43½c. Further increases are anticipated. These are not the only lines of metals, however, which are extremely firm in value just now. Copper seems to be becoming even scarcer, and an upward movement cannot hold off much longer. The market for zinc is quiet, for the moment. There is a heavy demand for Canada plates.

In the building trades there is very marked activity, and the result is a heavy demand for all kinds of hardware used in connection therewith. The call for cement is becoming more and more insistent, and though prices remain around $2, or a little higher sometimes, it is altogether likely that they will go higher before long. Nails and screws are steady. The demand for pig-iron continues good, with steady or rising prices. Deliveries are hard to obtain for the immediate future. A Chicago report, referring to this commodity, and of iron and steel in general, says:—

> Miscellaneous iron and steel business is of a highly satisfactory character. A month ago there was the possibility of a period of dullness ahead. The duration of the present metal activity has certainly lasted longer than formerly, and for that reason also a quieting down of trade was rather looked for by experienced metal men. But prospects have brightened within the past two or three weeks, and the precedents have gone to naught. There is reported a fair buying movement in almost all branches of the steel industry and the tendency of prices seems upward rather than the other way. For while production is unprecedentedly large the crude material is said to be decreasing at mills, so that considerable purchase of pig-iron for steel production looks unavoidable. It is the steel industry that holds the key to the situation. Finishing capacity is in excess of the furnace output and is making heavy calls for iron. Structural mills have been making noticeable gains on their orders during the past two or three months, and with the increased mill capacity now engaged are in a position to take care of a larger enquiry. That this larger demand will ensue seems probable as a result of the San Francisco disaster. Undoubtedly the use of steel in the rebuilding of that city will be larger to a marked degree than before, and the beneficial effect upon construction in other centres will probably be noticeable.

In general hardware the only outstanding feature is the increase of prices on shovels, plain shovels having been advanced a dollar a dozen last week. A good demand is noted in fishing tackle and sporting goods. A particularly brisk demand exists for wire screening, and the same may be said of building paper since the reduction of quotations a month ago. Ever since spring opened there has been a rush of orders at all the wholesale hardware houses, and conditions are such that they anticipate a particularly good season's business. Payments have been very satisfactory from practically all sections.

THE LIFE ASSURANCE INVESTIGATION.

Since our last comment, the manager of the Manufacturers' Life Company has been almost continuously on the witness stand. A great deal of attention was given by the examining counsel to getting at the nature of the company's investments in the way of stocks and bonds, and some of the facts elicited might properly be called startling. It is plain that the directors of the company chose to violate the provisions of the Insurance Act by purchasing securities which that measure did not authorize; while the manager off his own bat underwrote a security without authority of the board. Their object was, we are told, to make money for the company. But at what risk? It sounds strangely to hear Mr. Junkin saying that "limiting companies as to the class of securities is all wrong. My recommendation would be: 'Give us a free hand, the same as the English have, and we should have a better class of securities.'" In the light of his own evidence there is grave need for a very plain restriction as to classes of securities, and what is more, for the exercise of greater force to compel observance of the law than seems to have been exercised by the Insurance Department. It is not, and ought not to be, the aim of our legislators to permit indiscriminate speculation by insurance companies in securities of any and every kind that clever stock exchange dealers may recommend. The money of policyholders is a sacred trust, though some insurance directors do not seem to so regard it.

Happily the directors were able to make good losses caused by the decline in the market of certain securities bought. But suppose a less well-to-do directorate, and suppose a much heavier loss—which is possible at any time, as late experience shows—who is to make good the policyholders' loss? The machinery of the Stock Exchange and the use of subsidiary companies to conduct purchases and sales will, we should think, be less resorted to by insurance directors henceforward.

It is evidently not the intention of the Commission to permit only its own counsel to examine witness, for counsel of the Province of Ontario took part in the questioning on Wednesday and Thursday last.

* * *

LIFE ASSURANCE IN CANADA IN 1905.

It is learned from the abstract statement of the transactions of life companies doing business in Canada that the new insurance done by the companies in 1905 exceeded by $7,410,234 in amount of policies the amount written in 1904. The respective figures were $105,716,336 last year, and $98,306,102 in the year preceding. The increase was confined to the Canadian and British companies, for the United States companies' new policies in 1905 were only $34.486,215 in aggregate, where in 1904 they had amounted to $36,145,211. The following table shows the new business done during the last two years by different groups of companies:—

			P.c. of total.	
	1905.	1904.	1905.	1904.
Canadian companies.	$ 67,348,141	$59,051,113	63.24	60.07
British companies...	3,881,980	3.109.778	4.14	3.23
U. S. companies	34,486,215	36,145,211	32.62	36.70
Total	$105,716,336	$98,306,102		

The increase in the total for 1905 was, therefore, $7,410,234. Canadian companies exhibit an increase of 3.17 per cent.; British companies an increase of .91 per cent.; while United States companies wrote 4.08 per cent. less insurance than in 1904. It is not unlikely that the sensations of the life insurance investigations in New York last year had the effect of lessening the business written in Canada by the American companies. But it is reasonable to conclude, from the fact of an increase in the aggregate of life business written that confidence in the system of life assurance as a whole has not been shaken.

Turning now to the aggregate life assurance in force and comparing it with that of the preceding year, we find the increase for the year in this column a trifle larger than the gain of 1904 over 1903. Thus, the amount of the policies in force at the close of last year was $630,334,240, on which the premiums for the year were $22,080,717, while the amount of policies in force at the end of 1904 was $587,880,790, with premiums of $19,969,324, and those of 1903 amounted to $548,443,000, the premiums on which were $18,240,265. The number of policies in force at the end of last year was 718,081 as compared with 656,892. Not far from one-fifth of these (in number, but a far smaller proportion in amount), were industrial policies. The number of policies which became claims during the year was 8,870, representing $9,033,000, as compared with 8,537 policies for $8,832,000 in 1904. It may be remarked that the total business of the different groups of companies was as under:—

Total in force.	1905.	1904.
Canadian companies	$397,946,902	$364,640,166
British companies	43,809,211	42,608,738
American companies	188,578,127	180,631,886
	$630,334,240	$587,880,790

* * *

WHY EXPORTS FROM BRITAIN TO CANADA DO NOT INCREASE.

Following up our previous articles on this question we proceed to give some experiences of an agent for Canadian publishers of trade papers, who was sent to open an office in the Midlands. This gentleman established himself in one of the big towns and began a series of calls upon manufacturers in both textile and iron and steel wares. He had been furnished with proper credentials—the firm he represented being a reputable one—and with a dozen or two letters of introduction, some of them from agents in Canada of works in Sheffield and Birmingham, recommending their principals to advertise in Canada. Now let him tell his own story of his reception. He heads it, "Extracts from my Note Book."

As I have endeavored to show in my general report, the greatest difficulty with which the canvasser in England has to contend is that of securing an interview with principals of firms, or those in real authority. Neither must this be classed as purely a personal experience, for in conversations I have had with various travellers who either now cover and have covered English territory, it appears to be quite an accepted fact that unless you "have a connection,"—that is to say, unless you are on terms of business intimacy with the firms on whom you are calling—you are (to use a bit of slang), "up against a pretty tough proposition."

I could recount some instances of the unusual, almost curious, dislike that the British merchant seems to have of canvassers of any kind, I have heard of it many times, and experienced it oftener than is pleasant to recall. But it was amusing, too, sometimes. I wonder whether, if we were to call ourselves "solicitors" as the American insurance canvassers do, and *solicit* advertising cards instead of merely vulgarly *canvassing* for them, it would make any difference! But call him by any name you like—agent, tout, commissionaire, solicitor—the thing is the same, and that thing the Englishman does not like. He does not want his privacy invaded, and it seems he does not want to be told any new things, not even if it is how to enlarge his trade.

Now, although I record this exclusiveness as the greatest difficulty with which the advertisement canvasser in England has to contend, there are many others worthy of notice as pointing to an effective moral. Several firms I called upon had agents in Canada, from whom I bore letters of introduction. In such cases I was but voicing the agent's convictions when I expressed the opinion that it was to their mutual interests to expend a portion of their advertising appropriation in Canada. In some cases they were considering it (at least they said so), and one of these firms took a small advertising space "as an experiment," but the majority looked upon such a thing as an unnecessary expense. Why? Ah! There's the rub.

Just an illustration—I heard of a case whilst I was in England of an advertising man who dispatched 200 letters to as many English firms, enquiring if they were interested in the Canadian trade, and if they would like to have an agent in the Dominion. To such as were so far interested he offered to publish their requirements in his publication free of cost. To these letters he had close upon a hundred affirmative replies, and in most cases the replies were accompanied by catalogues, circulars, etc., describing each business respectively. Most of these firms were apparently quite anxious to do business in Canada, and expressed their thanks to the newspaper representative for his generous offer. So far so good. The agent fulfilled his promise to the letter. The names of the firms and their requirements were in due course published. Some of the firms secured agents; others could not get suited. The agent now made a canvass of the various firms to find if they were sufficiently interested to make the experiment of advertising in Canada. Not a single contract did he receive. And all these firms wanted to sell their goods in Canada.

A Personal Adventure.

I called upon a large firm during the early days of my trip, whose specialty is the manufacture of belting. This firm's name was classified in my note-book as an excellent prospect. I had seen the manager of their Canadian branch, who advised me that the principal of the firm himself was the only person with whom I could do business, and he was at their factory in England. Answering my various queries, he assured me that his firm were firm believers in advertising, and he considered my mediums were at least worthy of their serious attention. Referring to various English papers I found that the firms were indeed generous advertisers in the Old Country. They had full pages in several of the largest trade papers in my own line. The memorandum in my note-book opposite this firm's name was, therefore, as follows:—"These people should certainly advertise with us. They are large advertisers. Ours is the right medium for their line of goods. They are assuredly interested in the Canadian trade, for they have a branch in the Dominion."

Here, again, is one of the difficulties of the stranger. I really did not know who I wanted to see, or could with advantage see,—the principal not being forthcoming. However, after a moment's consideration, during which brief period I must confess I endeavored to impress the juvenile courier that I was an individual that would not be turned down very easily—I remarked: "See, here, young man, (addressing him as young man, I thought an excellent piece of diplomacy), Mr. ————, (naming the principal), was really the person I came from Canada to see. He has been notified by letter of my intended visit, and I am very unfortunate in finding him away from home. However, tell who officiates in Mr. ————'s absence? Mr. Dash, eh? H'm—Well, please convey my card to that gentleman and explain that as your principal is out of town, I should esteem it a favor if he would grant me a few moments of his time." The juvenile was impressed, right enough. Of that there is no doubt, for taking my card with a polite "thank you, sir," he disappeared. Returning very quickly, I was able to read on the youth's countenance that he was the bearer of ill-tidings. With a most grave, yet dignified demeanor, he strode towards me, and offering me my card, said with studied politeness, "Mr. Dash thanks you for calling, but being very busy is unable to see you." I took the proffered card, and wrote upon the back: "It was upon the advice of your Canadian representative I made this call. I am surprised at this reception." "Hand this to Mr. Dash if you please," I said to the boy. He received the card as before with a polite "thank you, sir," and disappeared to the mysterious "beyond."

Quite five minutes elapsed before he again put in an appearance, and this time almost treading upon his heels came a bright looking gentleman of middle age and medium height. I had expected a rather warm reception after my curt note, but if he felt at all mad he was able to conceal his feelings admirably, for he extended his hand, and with a pleasant "How 'dye do," invited me to be seated. "Now what can I do for you?" he commenced, calling me by name.

Well, it did not take very long for me to state my requirements. Rarely had I felt in better trim for canvassing. I gave vent to all my pent up feelings, and served it up hot. It was perhaps a feeling of exhaustion that brought about my conclusion—and then *I noticed that my auditor was smiling.* He quickly explained, however, "You are really very enthusiastic, and your arguments are excellent. However, I may as well tell you candidly that it is beyond my province to contract for advertising. Do you know," he continued, "I feel rather sorry for you." Now I positively dislike an expression of that kind, so looking as ungrateful as I could I said, "I beg your pardon." * * * "Well, you see, what I mean is this. I have had quite a little experience with canvassers from American newspapers; you know some of them have even gone so far as to open offices here. Many of them were fine fellows, too, eloquent solicitors, but one by one they gave up the struggle, and now in most cases their old haunts know them no more. I wish you every success, however." "Thank you," I said, as I commenced to pack up my papers, "but can you suggest a reason for my confreres' poor success," * * * "Ah, no, really. Perhaps you will be able to answer your own query a little later on." Prophetic words! I have almost liked that man since. But oh how I hated him at the time, polite and pleasant as he was.

❧ ❧ ❧

ACTIVITY IN NOVA SCOTIA.

Conditions are altered in commerce of late years, and staid mercantile communities are compelled to alter in accordance with them. The new way, the modern rapid method, the up-to-date plan—we are constantly hearing of these nowadays. And it is a mistake for any man or set of men to ignore the fact that things have changed and are changing in business circles. Old use and wont are of very little account in our brisk counting-houses to-day; former customs are found cumbersome, former methods slow, former phrases of compliment and of ceremony in correspondence are disused besause there is no time, (shall we venture to add no disposition) for them. Still there are here and there to be found persons who continue to find a charm in the gracious if formal letters of European houses, who still have time for the graces of life, and are little disposed to neglect them. But if we are to be polite we must not spend too much time over our compliments either in the counting-house or behind the counter.

Now, to look for a little at the new way. In our correspondence of last week from Halifax we find mention of some features of a kind which indicate the awakening of her commercial community. One is the instituting of an Industrial Promotion Company, to encourage industries within the city. Its capital is placed at $250,000, one-fifth of which is to be paid each year for five years by subscribers. The shares are placed at a nominal amount so as to enable small capitalists to join in the movement. This body aims to have a sort of supervision of new industries proposed to be established, and none are to be aided except those that are approved by a committee of the body. This is, we presume, to prevent the locking-up of a capital in schemes which either in character or extent are for whatever reason unsuited to the locality. The scheme may prove to be a salutary one; we have not details enough at the moment to enable us to judge of its exact scope.

Another movement strikes us as eminently practical, namely, a three days' projected excursion next week of Halifax merchants and manufacturers along the Halifax and South Western Railway, newly built, to meet in a social and friendly way the business people of Western Nova Scotia. This will give the city merchants opportunity not only to see their customers, and possibly make new ones, but to see the towns and their surroundings, the country tributary to them, and so judge of the probable progress of retail trade in certain localities. In another year or two, doubtless, they will be doing the like for the eastern end of the province, when the Nova Scotia Eastern Railway shall be completed. Bankers, insurance managers, shippers, and other business men would also be wise to take advantage of such occasions to inform themselves by observation of the state of the country, and as it were to feel the pulse of their representatives, which can often be better done by a chat than by a letter. Some of our western boards of trade and railways have promoted excursions somewhat of this character, and the results of them have been helpful.

It is significant of awakened interest to find intelligent effort being made to secure for the rich province of Nova Scotia some share in the stream of immigration that has set in towards this country from the British Islands and Europe. The Legislature is to be asked for a grant for such a purpose. But it should not be left entirely for Government to undertake this work. Nor is it a matter for Haligonians alone. There must be scores of willing individual workers all over the province, to say nothing of the Tourist Associations, Boards of Trade, and farmers' organizations, who will cheerfully assist to make known the attractions of Nova Scotia to newcomers from older countries.

Very interesting is it also to find the Mining Society and the Halifax Board of Trade taking an active interest in technical education, and matters relating to manufacture. In another place in this issue may be found a brief description of a conference of influential men to consider sheep-raising and wool-growing in the province. The union of interest and effort in matters which relate to the advancement of the country tends to produce harmony between communities formerly unacquainted, or perhaps estranged. And it rarely fails either, to broaden the vision and add to the information of the workers, under the influence of public spirit. And this is not a small thing, for none of us can know too much of the resources of our beloved Canada.

OYSTER CULTURE IN PRINCE EDWARD ISLAND.

More than half of the oysters caught and barrelled in Canada come from Prince Edward Island, but the industry is steadily decreasing in importance, notwithstanding the fact that last year the catch consisted of 18,000 barrels. In the Island Legislature there is now a bill providing for the lease by Government of properties for the purpose of oyster culture. These will be let out at the rate of five acres apiece per man for a period of not longer than twenty years, the idea, of course, being to counteract the decrease of the catch in recent years by artificial means. It is stated that one cause of the decreased catch has been the practice of mussel-mud-digging, the mud consisting largely of decayed oyster shells, and making a valuable fertilizer. Even the deposits of bivalves in Malpeque Bay, which have a continental reputation, are said to be giving out, though in some years they have yielded as much as $120,000. It appears that in successful oyster culture there is a good deal of science necessary. And not only this, but the animal is very particular as to its quarters. It cannot thrive where the ground is composed of moving sand, or where mud is deposited. Suitable places are limited, so that many young oysters fail to find a congenial resting place, and consequently perish. The best ground is where living and dead shells present a good surface for the attachment of the young, and for this reason those points where beds are already established, are those where the young have the most favorable surroundings, and the best chance for life. The Prince Edward Island Government's attempt to continue the industry on a more profitable footing will be watched with interest.

* * *

THE FUTURE OF FIRE INSURANCE.

The fire insurance companies have fully vindicated their right to fair treatment on the part of bank managers, wholesale merchants, courts, juries, and legislatures; which fair treatment has rarely been accorded to them. The disasters by which the fire insurance companies have suffered during the last forty years have been such as no other financial institutions have been subjected to, and there is no reasonable assurance of a surcease of sorrows; yet, as an institution, fire insurance has bravely met its misfortunes, and still survives.

It survives as an institution absolutely necessary to the safety and welfare of society; without fire insurance there can be neither enterprise nor credit. The banks may boast of the millions in their vaults, but without fire insurance the people might as well return to the old stocking and other portable depositories of their money; the merchants may survey with pride the magnificent warehouses filled with costly commodities, but let them be without fire insurance for six months and they will neither keep the goods nor sell them on credit.

Fire insurance has built and rebuilt cities and towns; which to-day depend upon fire insurance for their continued existence, as well as for the business by which they are maintained; and yet, if a question arises between an assured person and either bank, merchant, or any other magnate, the fire insurance company is seldom able to get either fair treatment by the other financial institutions, or reasonable justice from jury or court; whilst legislatures appear to exist for the purpose of worrying them by restrictions in conditions preventing them from justice by the ordinary means.

The reasonable conditions by which the fire insurance companies supplement those which are statutory, are subject to the whims and prejudices of judges, some of whom appear to pride themselves on their hostile attitude, so that assured persons have refused to separate damaged from undamaged goods, have prevented the ventilation of premises to lessen the effect of smoke;—have neglected reasonable means for preventing the increase of damage, and have, either by themselves or by the assistance of their bankers and creditors, obtained moneys to which they were not entitled.

I know one bank which posted a boycott against companies who declined to pay for property destroyed by the assured when it was shown and known that he employed a man to pour coal oil on the property and set it on fire.

I have known wholesale houses insist on the payment of claims based upon inventories which were shown and known to them to be false in quantities and valuations.

I have known juries toss up to determine a verdict, and judges declare their prejudice against companies properly defending themselves from fraudulent claims.

In many places to-day the communities will assist the criminal claimant and hinder the insurance adjuster; and when you go to the legislatures the legislators do not determine what is right, but what will most militate against the fire insurance companies.

For all that, no person, or business or financial institution can do without fire insurance, so that the question arises of companies' future conduct, as they are likely to be face to face with loss claims which will amount to larger sums than ever before experienced.

Whether fire insurance is a legitimate business having the right to contract as it may agree with its customers, or a science in which the actual risk is capable of computation, or a profession in which continuous study and varying practice are imperative, or a veritable speculation in which uncertain chances are blindly taken, and luck, good or bad, decides the issue is a matter for consideration; but, after each of the catastrophes of the last half century we have seen some companies retire ruined, others retire from fields which have proved disastrous, others amalgamate whilst those which have remained have increased the rates of premium over wide areas to recoup themselves for local losses.

The primary idea of insurance is prescient valuation of all risks so as to assess them for losses to be met and expenses incurred; the mutual idea is assessment after loss to provide funds for their payment. Another idea (which was exploded by the Chicago fire), was the participation of the assured in profits arising from excess contributions in premiums. Last year we had learned discussions anent the conflagration hazard; a few years ago we had electricity on the brain; not many years since we had the danger of petroleum as a proper safeguard to gas which followed that upon lucifer matches. This year we will have scientific discourses concerning the hazard of earthquakes—next year it may be volcanoes, or some other—but it is sure that the losses in California cannot be made the excuse for the increase of rates in Labrador or other distant points where the hazards are not increased,—so there must be a new departure altogether, or many of the companies will no longer be seen on this continent.

Amongst the new provisions should be the right of contract untrammeled by restrictions.

The requirement of written applications signed by the assured.

The responsibility of local agents as to over-insurances on buildings, and as to the statements they make concerning the character and circumstances of the applicants.

Governmental investigation into the causes of *all* fires.

The governmental prosecution of incendiaries:—

The assessment of all claims by competent adjusters.

The report of all individual claims for losses and the payments made thereon.

Very few fires occur from causes which were not easily preventible, a combination of sanitary and police methods would rid the country of the accumulations of rubbish, soot, etc., etc., from which many fires originate, or by which they are made into conflagrations.

At any rate the time is opportune for the putting of the house in order, so that fire insurance may be a legitimate, scientific profession, and investors may be encouraged in the organization of fire insurance companies.

HENRY LYE.

* * *

MONTREAL'S EX-MAYOR.

Montreal has been often fortunate in its public servants. Again and again she has been loyally served by men of broad views and public spirit, who gave to the municipality time and effort which might have been spent in dignified leisure or in self-aggrandizement. The example of such men is a civic asset of much worth to the rising generation, while their memory, if they have departed this life, is precious to residents who have survived them. That self-sacrificing effort in the interest of a community receives sometimes recognition in one's life-time is happily shown by a pleasing incident of last week in our chief city.

A number of prominent citizens of Montreal, desiring to show appreciation of the services rendered by Mr. H. Laporte during the nine years he filled the offices of alderman and of mayor, assembled in the council chamber of the Board of Trade and presented that gentleman with a handsome cabinet of silverware. The cabinet is of polished mahogany, and the salver bears an inscription setting forth the occasion of the presentation. The tea service is of elegant design, made in Canada by Henry Birks & Sons. In presenting the gift, the president of the Board of Trade, Mr. F. H. Mathewson, touched upon the need of reform in municipal affairs of the city, by reason of the reckless extravagance, dishonesty and general mismanagement of the city's affairs which prevailed when Mr. Laporte took office as alderman about 1897. With the assistance of some co-workers, that gentleman was able, he said, to effect a great improvement in the city's finances, and added Mr. Mathewson, "You were the means, to a very large extent, of purging the general administration of the city's affairs of many of its most unblushing evils, and it was a fitting reward for your great services in the capacity of alderman that you were elected to the position of chief magistrate of this important city." But for the state of Mr. Laporte's health, he might have held this post for still another term. Mr. W. I. Gear and Mr. George E. Drummond supplemented Mr. Mathewson's address in words expressive of gratitude and admiration.

Mr. Laporte, in returning thanks, remarked that in the testimonial he saw not only a reward for what he had tried to do, but an endorsation of his municipal career. He was satisfied. The testimonial of which he had been the recipient was a great honor and reward for him. He thought that the support he had received when in municipal life was the greatest reward which could be tendered to a public man.

There were no fewer than 233 subscribers to the testimonial. The committee which had the matter in hand was composed of Messrs. F. H. Mathewson, president of the Board of Trade, chairman; C. H. Catelli, president of La Chambre de Commerce; Hon. R. Dandurand, Ald. Carter, Ald. DeSerres, E. S. Clouston, George E. Drummond and George Hadrill, treasurer.

* * *

DEATH OF MR. T. G. BROUGH.

To chronicle the death, suddenly, while yet in middle life, of Mr. Theodore G. Brough, general manager of the Dominion Bank, brings to memory the others, his predecessors in the managerial chair, Mr. Robert Bethune and Mr. Raynauld Gamble, who succumbed after very short periods of illness. Mr. Brough left for England last month to visit his daughters, and a week ago, or more, while in London, suffered a stroke of paralysis, which resulted in his death on Wednesday last. No further particulars than these of his illness and death are obtainable at the moment.

Mr. Brough had served the bank a long time. After some mercantile experience he entered its service as a junior clerk at Uxbridge branch in 1875, and acted in various capacities in other branches for fifteen or twenty years, familiarizing himself with his profession. He was called to Toronto about 1884, and when the Market branch of the bank was opened he was appointed its manager, and built up a most creditable business, which established him in the esteem of head office. In 1892 he was made inspector of the bank, becoming manager of the Toronto branch in 1895. Following the death of Mr. R. D. Gamble, in 1899, he was appointed general manager. In seeking for causes to account for his early and sudden seizure it is recalled that the deceased gentleman had an attack of typhoid fever of exceptional severity about ten years ago, and his friends say he has never been so vigorous since that illness.

* * *

STERLING BANK OF CANADA.

The Sterling Bank of Canada opened its doors for business this week. On its board of directors are such well-known Toronto business men as Mr. W. K. George, Mr. John Eaton, Mr. Noel Marshall, while the gentlemen directly concerned in its management have been brought up, we understand, in the service of the older banking institutions. Some desirable accounts have already been placed in the hands of the new institution. A day or two ago we had the pleasure of seeing some of the bills of the Sterling Bank, and, while distinctive, they are very attractive. The fives present on their face an allegorical picture of Commerce on the high seas, while on the back is the Royal Coat of Arms, all done in a pleasing shade of green. The striking feature of the tens is the scrolled roman numeral, representing the denomination of the bill; while on the back is a picture containing Britannia, a man-of-war and a couchant lion. The Sterling opens with a remarkable list of branch offices. Besides the head office in Toronto, there are no less than fourteen in different parts of Ontario. The following is a list, with their respective managers:—Goderich, R. Jeffrey; Varna, Wm. Beatty; Sebringville, E. E. Kastner; Watford, J. B. Wynne; Orangeville, A. L. C. Kirkwood; Cornwall, G. F. Ellis; Tamworth, C. R. Jones; St. Catharines, E. D. Voisard; Uxbridge, C. Urquhart; Parkdale, G. B. Brown; Wellandport, James A. Ross; Cookstown, S. R. Graham; Almonte, Edward R. Crombie; Maple, James Oliver.

* * *

A second branch has been opened in Brantford by the Bank of Hamilton. It is in charge of Mr. W. W. McGillivray.

MANILA ELECTRIC CORPORATION.

The accounts for 1905 of the Manila Electric Railroad and Lighting Corporation, the bonds of which were floated in Canada by John Mackay & Company in January last, have been issued. They show a total net revenue of $354,670. railway department has, however, only been in operation since the 10th of April last year; but the returns for the early months of this year show a continued increase. Raising the actual railway receipts to a twelve months basis, net annual earnings are arrived at, amounting to $424,701. The fixed charges for the whole twelve months were $195,109, so that the corporation is earning profits at the rate of more than double its fixed charges. The report of the president, Mr. Chas. M. Swift, states that the construction will be probably completed within two or three months, and that the proceeds of the bonds already issued will discharge all present construction obligations.

A franchise has recently been issued to the president, we are told, for the building of a suburban line to Fort McKinley and Pasig. Plans for financing this project have not been fully completed, but it is expected that all or a large majority of the stock of the company formed for the purpose of building the same will be acquired by this corporation. In connection with this grant the Manila Electric Railroad and Light Company has been given a revocable license to extend its tracks to the new port works and also to carry freight. The rights thus acquired, together with the earnings of the Fort McKinley-Pasig extension, will, it is expected, add substantially to the gross and net earnings of this corporation.

* * *

PELICAN AND BRITISH EMPIRE LIFE OFFICE.

The annual report of the Pelican and British Empire Life Office was submitted at the 109th annual general meeting, held in London on 26th April. The net new assurances amounted to almost four millions of dollars ($3,943,625) and the income of the year was $3,252,985. Of this income the large share of $999,530 was from interest, and $2,059,045 from net premiums. Claims to the aggregate of $1,425,586 were paid, as well as endowments matured to the extent of $330,509 and annuities.

The year last past closed a quinquennial period of this old and strong company, whose accumulated funds amount now to $26,038,000, having been increased by $860,000 by the transactions of 1905. By the quinquennial valuation just made the value of the company's securities was found to be in excess of the amount stated in the balance sheet, in spite of the decline in investments. Higher rates of bonus have been earned than were expected. In the Participating Fund the divisible surplus amounts to $611,105. The directors declare a vested bonus addition to participating policies with full bonus rights, in force at the 31st December last, of $16 per $1,000 for each complete year's premium paid in respect of the quinquennium, representing an addition of $80 per $1,000 assured for the five years. Payment of interim bonus at the same rate will also be made under endowment assurance policies maturing by survivance before the close of the year 1910, and at the rate of $10 per $1,000 under whole life and endowment assurances.

* * *

BANKING AND FINANCIAL.

The Bank of Toronto advises us that branches of that bank have been opened at Yorkton, Sask., and at Cartwright, Manitoba.

An office of the Crown Bank of Canada was opened in the town of Napanee on the 1st of May, with Mr. Burnett Laing temporarily in charge.

The Canadian Bank of Commerce has bought a lot in Saskatoon and is going to have a neat building for a branch at that place, which is shortly to be a railway centre with three roads where it has now only one.

Saskatoon, in the Province of Saskatchewan, has been chosen by the National Trust Company as a branch, it being a growing place, centrally situated, for the inspection of farm lands in the prairie country. By July they expect to occupy a new cement building, built on a corner of two thoroughfares.

A Montreal letter says that La Banque Provinciale intends to remove this month to the offices vacated by the Chambre de Commerce, as a temporary banking room. The offices of the bank in the east side of Place d'Armes are to be completely remodelled and enlarged. The basement will be fitted up for the new trust company, to be carried on in connection with the bank.

On Wednesday evening last, at the Hotel Vendome in Sarnia, a complimentary banquet was tendered to Mr. Mortimer Atkinson, who for the past four years has been manager of the Bank of Toronto at that place, and is now leaving to assume the management at Brockville. About fifty of the principal business men attended. Ex-Mayor Thos. H. Cook was chairman of the occasion. Mr. Atkinson was presented with a cut glass service.

The Home Bank of Canada has opened a branch at the village of Shedden, near St. Thomas, Ont., which will be under the supervision of Mr. W. B. Waterbury, with a competent staff. The office at St. Thomas, to which we have already referred as being managed by Mr. Waterbury, is occupying temporary premises at present, but we understand one of the best corner buildings in the city has been secured and will be occupied during the coming summer.

A correspondent of the Temiscaming "Herald," writing from Latchford, a village eighteen miles from Haileybury, says:—"Talking of building, for hustling in this particular line commend me to this Burg. The foundation for the Bank of Commerce office was laid one morning and the evening of the following day the premises were ready for occupation. The Traders Bank are opening in a part of Messrs. Howard & Hawkin's store during the building of an up-to-date branch."

The distress of the people of San Francisco has been enhanced by the burning of the banks. The chairman of the municipal finance committee, Mr. J. D. Phelan, said on Sunday: "The demands on the finance committee are very great, and we do not see how we can meet them if the conditions continue. There is not any money in circulation. The banks are closed because they do not dare to open the heated vaults." All the banks in the ruined city, forty-four in number, 32 commercial and 12 savings, were situated within the burned district. Inspection has proved that the vaults in every instance remain intact, but with probably two or three exceptions the fine bank buildings were destroyed. The money on hand in the commercial banks at the time of the earthquake was $16,551,454, while the savings banks have coin amounting to $3,088,804. With the $10,030,765 in specie in the vaults of the ten national banks, there is an aggregate of $30,571,023 in coin immediately available.

* * *

LIFE ASSURANCE ITEMS.

A link with the past was severed when F. W. Gates, for nearly thirty years vice-president of the Canada Life Assurance Company died in Hamilton on 30th April. Mr. Gates was 84 years of age. He was born in Montreal in 1822, and having meanwhile removed to Hamilton was elected to the board of the Canada Life in 1858, becoming vice-president in 1877. Universally respected throughout a long life in Hamilton, Mr. Gates leaves pleasing memories, to both relatives and friends, of a reputable business career.

With a view to the further development of the company's business in Canada, the management of the London and Lancashire Life have been lately extending their organization in the Canadian North-West on the one hand, and the Maritime Provinces on the other. Messrs. Fraser & Macdonald, formerly agents of the Mutual Life of New York, are appointed provincial managers for Alberta and Saskatchewan, with headquarters at Calgary. In Manitoba the affairs of the company are given attention by Mr. Laurence W. Hicks, provincial manager, with headquarters in Winnipeg. A local committee and board of reference has been appointed, consisting of Messrs. A. L. Johnson, C. C. Chipman, D. E. Sprague, M. Bull, and W. R. Allan, as chairman. In the Maritime Provinces Mr. George E. Dawes has been appointed provincial manager for New Brunswick and Western Nova Scotia, with headquarters at St. John. A local committee and board of reference has also been organized, consisting of Messrs. Walter Mitchell, Nelson B. Smith, J. C. O'Millin, H. R. Silver, and Hector McInnes as chairman, all of Halifax, with Messrs. Grant, Oxley & Company, general agents.

A periodical that was issued some years ago by the New Hampshire Insurance Company and ceased publication for a time has again made its appearance. Appropriately for a Down-East journal it is entitled "Whittlings." Here are some of its late definitions:

Boomerang—Unjust restrictive legislation.

Taxation—A legal method of increasing insurance rates.

Policy—A written excuse for paying another man's losses.

Inspection—[From inspec—to look inside, and shun; to keep off] see also cancellation.

Pyramid—A pointed product of practical prosperity peculiar to New Hampshire.

Salary—An excuse for living advanced by some people who have exceeded the age limit prescribed by Dr. Osler.

Protect.—A term sometimes used to indicate the retaining of business by selling one's stock-in-trade at less than the cost price. [See also Suicide.]

* * *

FIRE AND MARINE INSURANCE.

It is an illustration of the great strength of some of the old English fire underwriting companies when we read that, notwithstanding an estimated loss of about $1,600,000 net by the San Francisco conflagration, the Phœnix Assurance Company of London will have a surplus of assets over all liabilities exceeding $6,250,000. We learn, by the way, that the chief agents of the Phœnix for Canada, Messrs. Paterson & Son, of Montreal, have let contracts for the new office building of the company, nearly opposite the Stock Exchange, on St. Francois Xavier Street in that city. They will be, we are sure, handsome premises, for this company does not do anything in a small way. The ground floor is to be devoted to the use of the Montreal business and agents, and the 1st, 2nd, and 3rd floors will be required to accommodate the rapidly growing business of the company throughout Canada.

A letter of 20th April from Manchester says:—"Our papers contain nothing but 'Frisco news and the assurances of fire office managers that claims will be meet liberally. They are reported to say that the Pacific Slope has been the profitable region to them and that they will not quibble. The London and Lancashire, Royal and Sun offices are specifically mentioned as having heavy commitments."

Another English letter, dated London, 21st April, thus refers to the insurance situation in view of the San Francisco earthquake: "Since Wednesday insurance shares have been dropping like lead. I enclose one or two cuttings which may be of use. The Stock Exchange fall in other securities is explained by the fear that the hitten will have to realize quickly, and like good Christians our financiers are going to see that they sell at a bad price. But the Daily News says unctuously that the foreshadowed decision of the British offices to waive the earthquake clause "shows that a Christian spirit may prevail even in business." No calamity but has its consolation. Heaven and the main chance are very close together."

* * *

TRADE NOTES.

Telfer Brothers, Limited, Collingwood, have received an Ontario charter authorizing them to carry on a business of wholesale and general grocers and provision merchants, and to manufacture biscuits and confectionery.

The American Tobacco Company is understood to be preparing plans to build one of the largest tobacco factories in Canada in Montreal to replace the one which was recently burned. It is to be five stories high and 370 feet long, and will cost in the neighborhood of $250,000.

Northway Bros. & Winger, Limited, Toronto, capital $300,000, have been authorized by Ontario charter to manufacture and deal in dry goods, fancy goods and like merchandize by wholesale or retail.

The Bain-Wilson salmon cannery at Rivers Inlet, B. C., was a few days ago demolished by a small-sized "tornado," or windstorm from the mountains. Fortunately no one was injured. The cannery is to be rebuilt as speedily as possible.

The Ontario "Gazette" gives notice of the granting of a charter to the Maclaren Imperial Cheese Co., Limited, Toronto, which will as heretofore, manufacture, purchase, sell and deal in cheese and other dairy products, grocers' supplies, etc., and carry on a general business as manufacturers' agents.

The several grocery houses which amalgamated two or three years ago under the title of the Canada Grocers, Limited, have decided to dissolve and to carry on their businesses as individual enterprises. The combination was capitalized at $5,000,000, Mr. G. E. Bristol being president, and Col. J. I. Davidson vice-president. It is understood that differences of opinion had crept in among the firms composing the body and that it was thought better, therefore, to dissolve the agreement.

* * *

An illustration in the latest issue of the "Marine Review" shows pictorially the effect of a collision between two large steamers moving in different directions. On 16th April the steamer "Saxona," downward-bound from Duluth on Lake Mary River with the steamer "Zimmerman," upward bound Superior, with a cargo of flax-seed, collided in the Saint from Lake Erie with coal on her first trip. The latter was struck 20 feet from the stem, the bow and steel sides being crushed in as far as the pilot house. The "Saxona" was run ashore at Little Mud Lake, but the "Zimmerman" sank at once not far from the canal locks. A few dimensions will give an idea what such a disaster means in the way of expense. The smaller steamer was of 4,716 gross tons, length 416 feet, beam 50 feet, value $260,000; the larger boat cost $350,000, was 520 feet long, and of a proportionate tonnage. Advices of 26th ult. are that the "Saxona" reached Buffalo last week and delivered her cargo of flax.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ending with Thursday, May 3rd, 1906, as compared with those of the previous week.

	May 3.	May 26.
Montreal	$32,156,309	$26,616,545
Toronto	24,592,659	23,054,798
Winnipeg	8,151,545	9,002,993
Halifax	1,691,196	1,692,951
Hamilton	1,551,397	1,457,759
St. John	1,180,192	1,094,918
Vancouver	2,276,971	2,386,889
Victoria	767,267	757,466
Quebec	1,741,077	1,384,657
Ottawa	2,546,066	2,342,773
London	1,193,975	1,049,307
*Calgary	....	....
Total	$77,848,654	$70,841,056

---

*A Clearing House has been opened at Calgary, Alberta. This week's figures have not come to hand, but for the week ending April 28th the clearings were $886,000

NIAGARA ON EXHIBITION.

Impressed and pleased to a certainty were the two hundred or more guests of the Boards of Trade of the twin power cities of Niagara Falls in New York and Ontario with their reception on Saturday last, and with the wonders and delights exposed to them during what may be termed a fifteen-hour day-and-night jaunt. Steam and electricity seemed to be the watch-word of the time. Driven in electric trams to an electrically cooked breakfast at the Natural Food Factory on the United States side, we were zig-zagged about from one side of the great cataract to another. The Niagara Power Company, after showing us the wonders of their plant above and below ground, placed a steam locomotive and train at our disposal, to exhibit the great development which has ensued upon the completion of their power delivery. Factory after factory, from the aluminum plant to the carbide factory, the various lime works, and other establishments were overseen, and the industrial village which has been created close to the Falls as well as the great expanse—1,100 acres having been purchased by this company, not half of which is yet covered by industrial establishments—along the margin of the river which, if the motive force had been coal instead of electric power derived from the Falls, must have been as black and grimy as Sheffield itself. Lunch at the Ramapo Iron Works gave pause to our waiting appetites.

A striking thing it was to see the power houses of this great concern, the Niagara Falls Power Co., which has been supplying electric power to Buffalo for some eight years. It is generally supposed the first of the group of power companies which cluster about both sides of the Falls. But this belief is incorrect. The first was the Hydraulic Power & Manufacturing Co., which used power in the early seventies. It is said to command 30,000 horse-power. To be taken 160 feet below the surface to see at that depth the huge whirling spindles on which revolved the generators, capable of producing 105,000 horse-power was for us a stirring experience indeed. The larger proportion of this power is supplied to the industries on the eastern bank of the river, but a great proportion of it goes to the lighting of Buffalo and to the supplying motive force for various purposes in that city.

From great distances came the guests of this occasion. Boston, Worcester, Marlboro', Newark, New York, Albany, Cleveland, Montreal, Ottawa, Toronto, Brantford, Hamilton, Rochester, as well as Buffalo, and the twin cities gave their quota. And most effective were the officers of the day, marshalled by that marvel of energy, E. H. Taylor, of the Niagara Falls, N. Y., Board of Trade, chairman of the joint committee. Care had been taken to secure, among other requisites of a day's enjoyment, proper weather, and so there was no need to complain of "the uncertain glories of an April day." The skies were blue and clear, ozone plentiful, the physical and the moral atmosphere bracing, the great cataract was at every man's eye and ear. It was every body's chance; and if any one did not enjoy the day the fault was in himself or in his star.

Down the United States side we went, by the Gorge Route; across the most northerly bridge to feast our eyes and imaginations on the tossing rapids or the circling maelstrom; back by the Canadian Electric Railway. Too short was the time to absorb all the wonders of the cluster of stations of three electric companies, namely, the Ontario Power Co., the Canadian Niagara Power Co., and the Electrical Development Company of Ontario, built and building on the Ontario shore, intended to harness "Nee-a-gahra, Father of Waters," for the purposes of man. The array of stone and concrete walls above the waters and below, the power-houses and transforming stations, graceful as massive, the back-ground of green bank, with slopes and terraces, the expanse of foaming water beyond—such a sight as compels the man of fancy and the men of fact to pay tribute to the daring skill of the engineers and the enterprise of the men of capital who are, so to speak, "behind the gun."

The wondering and excited party scattered themselves over the various works, the fore-bay and gathering dam of the Ontario Power Company, the rampart-like retaining walls, the masses of new-laid concrete some day soon to be hidden forever from sight by rushing water; the huge steel conveyors, the great spaces of unwatered rock in the Electrical Development Company's property, unsunned for centuries, the cavern-like wheel-pits that looked like canal locks 100 feet deep, the cranes, dredges, engines, cars, and the pigmy-like workmen so insignificant among the larger and inanimate objects around them—all this scene of activity and promise filled the eye and filled the mind with wonder what all this industrial landscape would look like when the plans of all three companies should be completed, and the ideal of the Canadian Park Commmissioners be realized. The first-named of these companies has a power house (220,000 horse) under the cliff, below the Horse Shoe Fall, and a transformer station at top of cliff overlooking the landscape. The great walls, low arches, and curving white masonry of the gathering dams, the stateliness of the large buildings, the green terraces and sloping banks against which they were relieved, gave assurance that, as, indeed, one of the American visitors expressed it, Johnny Canuck will have a pleasing effect of art and nature to offer in contrast to the ragged and ugly defacements which Uncle Sam has permitted to exist these many years on the east bank below the cataract.

Very agreeable people were these visitors from the East, and one could learn a lot from them. On one occasion I sat beside a New Yorker of rapid utterance, whose language was as full of slang as Billy Baxter's Letters, decorated occasionally with phrases that suggested Chimmie Fadden's scarcely veiled profanity. On another my neighbor was a Massachusetts man, slow and precise of speech, so slow and oratorical, indeed, whether talking business or telling a story, that he recalled the down-east Alfred Jingle who, not having coin enough to pay for his lodging and drinks overnight, made the tavern-keeper a speech of thanks in which he regretted his empty pocket, but promised that : "When the Aurora of Morn shall again gild the eastern horizon, I will, with a suitable remuneration, reward your munificent hospitality." They were interesting people, however; one of them, a New Jersey man, most attractive in manner and a perfect mine of anecdote and quotation, besides being extremely well-informed in the field of industry and commerce.

It was a pretty notion to have the banquet held in that striking and unexpected building, formerly, "The Hospice" of the Carmelite Brethren, situate two miles up the river on the Canadian shore. This is to-day a well-appointed modern hotel, where more than two hundred of us sat down, under the effective chairmanship of W. German, M.P., for Welland County. We listened to addresses of an instructive kind: one upon "Technical Education," by Mr. Harold W. Buck, electrical director of the Niagara Falls Power Company; on "The Uses of Electricity in a Modern Plant," by Calvin W. Rice of the General Electric Company, and Paul M. Lincoln of the Westinghouse Company; and a "Review of the Growth of Manufacturing Interests in Canada," by Mr. Edward Gurney, of Toronto. The day's entertainment had been arranged by the Boards of Trade of the twin power cities to show the manufacturers all the advantages of Niagara Falls as a location for every kind of manufactory. And it must be said that this object was attained. This "Manufacturers' Day," as it was termed upon the menu, April 28th, will live long in the memories of those who were privileged to be of the party.

* * *

—It is pleasing to hear that a grant is to be given by the Dominion Government to an exhibition in Charlottetown, Prince Edward Island, during the coming autumn. The amount of the grant, we are told, is ten thousand dollars. In aid of the same project a sum of four thousand dollars will be given by the Government of Prince Edward Island. During the four months or more that will elapse before that event takes place we hope that many Ontario and Quebec people will make arrangements to visit that beautiful Province. They may take their automobiles as well as their fishing rods and bathing suits.

FIRE INSURANCE MATTERS.

It is learned from Canada "Gazette" that the Richmond & Drummond Fire Insurance Company has been granted license to do business in Canada. Head office of the company at Richmond, Que.

The council of Richmond, in the Province of Quebec, has passed a by-law for borrowing $25,000 to improve the town's water system, chiefly, it is stated, with the object of providing efficient fire protection.

A circular issued from Montreal by the Queen Insurance Company of America to its agents, says: "The loss of this company by the great conflagration at San Francisco will amount to $1,300,000 in round figures, and the individual losses making up this total are even now in process of adjustment and will be closed as speedily as possible and paid forthwith in accordance with the well-known traditions of the company. On January 1st, 1906, the Queen's net surplus to policyholders over all liabilities amounted to nearly $4,000,000, which surplus has been considerably increased since that date, and we can pay the above loss without appreciably reducing our net surplus."

The Chicago Board of Underwriters, realizing the frequency of spontaneous combustion in soft coal, are becoming nervous over the large stocks of that commodity that have been collected in anticipation of strikes among the operatives. They have sent the Building Managers' Association of that city a request that unusual precaution be taken if they store large amounts on their premises. It is suggested that perforated pipes be run at intervals through the piles, so that water can be forced to the seat of the trouble if fire should break out. The occupant of one large building, however, does not like this prosposal, holding that there are other ways, safer and more economical, of attaining the same result. He declares that a large part of the coal now being stored is not likely to cause a fire hazard, and that the flooding of the coal would be destructive to the steam value of the coal.

At the time of the great conflagration, 1877, in St. John, New Brunswick, which caused a loss of fifteen millions of dollars, San Francisco citizens subscribed $7,000 towards a fund for the relief of the Canadian city. All the money sent in on that occasion has not been used, not being needed. Now the proposal is made, and the proposal seems to us a proper one, that the unexpended balance of this distress fund be sent to the San Francisco sufferers.

* * *

—Judging from despatches we have seen from New York, the authorities of that city are becoming alarmed at the manner in which Montreal is forging ahead as a shipping port to the detriment of the former. Montreal shipping companies, with the co-operation of the railways, are enabled, they see, to use the dock system at practically no cost for their freight business. Mayor McClellan, of New York, has, at the request of the sinking fund commission, appointed a commission to consider the question of rates on pier privileges in the seven great freight piers, which the city has just completed at a cost of $20,000,000 on the North River front, between Charles Street and Twenty-second Street. He did this because the city dock commissioner declared that the business of the port was steadily growing less, and that the sea ports of Montreal, Norfolk, Boston and New Orleans were profiting because of the niggardly policy of the city.

The Fox Lumber Co., of Skagit county, Wash., has bought a saw-mill at Gibson's Landing, Howe Sound, B.C., and will make a specialty of cedar for interior finishing purposes.

Water was let in at the Lachine Canal, Montreal, for the first time this season on Saturday afternoon, and dozens of barges have passed through with freight for the ocean steamers leaving port this week. A good many repairs have had to be made to the canal during the past month or so, but in spite of that it was opened two or three days earlier than usual. The new Grand Trunk elevator, located near the Montreal entrance of Lachine Canal, and operated by the Montreal Warehousing Company, was formally opened on Saturday in the presence of a large gathering of prominent railway, steamship, commercial and public men, including Hon. L. P. Brodeur, Minister of Marine and Fisheries. This elevator is regarded as perhaps the most thoroughly equipped structure of the kind on the continent. It is absolutely fireproof, the materials of construction consisting entirely of steel and cement. The bins which contain the grain are rectangular in shape instead of cylindrical. There are 144 of them, and they vary in capacity from 2,750 bushels up to 11,000 bushels. The motive power throughout is electricity, with a total horse-power of 1,408, distributed over nineteen motors. There are ten elevator legs, five of which are used for receiving, and all can be used for delivering. There is also a marine leg for elevating grain from vessels in the Lachine Canal basin alongside, with

OUR HALIFAX LETTER.

Recent events indicate that the people of Halifax are beginning to realize the advisability of taking that piece of advice which has been so often tendered to them, namely, to depend on their own exertions rather than on outside assistance for the advancement of the city. About a year ago it was prophesied in this correspondence, as may be remembered, that the withdrawal of the navy and the army from Halifax, although involving an immediate loss, of considerable magnitude, would eventually work out for good by teaching the people to seek new sources of revenue-production of a more virile and helpful nature. Whatever is the impelling cause, this is assuredly being done now. There are a half dozen things of considerable importance now before the public in this city, which point to an entirely new spirit among the people. One of these is the interest shown in technical education, which the Board of Trade, the Mining Society, and other influential bodies are discussing and endorsing. Another is the excursion of merchants and manufacturers along the western shore of Nova Scotia. On May 7th a large number of the leading business men of the city will make a three days' tour along the Halifax and South-Western Railway, in order to meet, in a purely social and friendly way, the business people of that part of the country. No attempt will be made to solicit orders, although it is doubtless hoped and expected that orders may come of it.

For some time past there has been under discussion in the newspapers and elsewhere a plan to establish an Industrial Promotion Company in this city, to encourage small industries, and it is now an assured thing. The Council of the Board of Trade, before whom it was put for endorsement have after full consideration endorsed it unanimously. It contemplates a capital of $250,000, subscriptions payable not more than 20 per cent. each year for five years, the shares being of such moderate denomination as to enable the small capitalist to participate. Only such industries are to be aided or established as shall have received the endorsement of the committee of the company. The scheme is now being put into concrete shape and will be before the investing public shortly. Several large subscriptions have already been promised, and there appears, no doubt, that the whole capital will be secured without difficulty.

The Provincial Government has announced that it will give assistance to the proposed Nova Scotia Eastern Railway on the same terms as it did to the Halifax and South-Western, a loan of $12,000 a mile, secured by a first mortgage on the road. An Act has been introduced in the Legislature to incorporate the "Halifax and Eastern Railway Co," composed of H. A. Allan, Andrew A. Allan, and Charles J. Coll, to build this line, which is to run from Dartmouth (across the harbor from Halifax) to Guysboro' with a branch line at or near New Glasgow to Country Harbor. The company is capitalized at $2,000,000, and construction will be proceeded with at once.

The announcement that the Allans and the C. P. R. will divide the contract for the mails hereafter has caused great satisfaction here, as by providing the element of competition it is hoped we shall be given a more satisfactory service than in the past. The winter service has been very unsatisfactory, the mail boats usually taking from eleven to thirteen days from Liverpool to Halifax with the mails. There has been no reduction of time during the past twenty-five or thirty years, and the new turbiners, which were expected to make such an improvement, were put on only at the close of the season.

An effort is at last being made to divert to this Province a portion of the stream of immigration from Europe constantly passing through to the West. It seems remarkable that such an effort was not made long ago. Mr. Keefe. M. L. A. for Halifax, said in the House a few days ago that he thought it would be a good idea for the Government to have the different counties make up a register of vacant lands, and endeavor to induce some of the immigrants who now go directly West to remain in this Province. The Premier replied that he would ask the House for a small appropriation towards such a work.

The Midland Electric Company, Limited, of Truro, is seeking a charter for the purpose of furnishing light, heat, and power in Colchester County. It is the outcome of a move on the part of citizens of Truro, who are dissatisfied with the present service.

Halifax, N.S., 28 April, 1906.

* * *

OUR NORTH OF ENGLAND LETTER.

A new thing in English commercial life is the System Club, which has been formed lately in London. Its founders are heads of very large but dissimilar businesses, who found benefit from sharing experiences when only three or four met for exchange of ideas, and who foresaw that a richer harvest of suggestion would be reaped from a larger fellowship. So, in a quiet way, the club is enlisting leading members of each leading industry and trade and confining its membership to one representative of each. At a monthly dinner a particular problem is posed, and is discussed without too much ceremony, so that every one may be encouraged to contribute to the common stock. The club seems more American than British to our unaccustomed eyes, but as it arose out of a real want, and has already given satisfaction to its priviliged few, the inference is that the club is not entirely fantastic. As no guests are admitted and its transactions are secret, one cannot say how much intimacy is shown. No doubt the discussions go somewhere near the heart of affairs, for it would be difficult to picture some of the founders wasting time over the platitudes and rhetoric which characterize conventions we read of, that are held in the States.

An interesting stage has been reached in the conflict between the Proprietary Articles' Trade Association and the Co-operative Societies. The former is, of course, a league of manufacturers who insist that certain prices shall not be cut, and the latter are organizations which give a bonus on sales. Either you stop paying bonuses on purchases of these goods—say the manufacturers, in effect—or you stop selling our brands. So far as the Co-operative Wholesale Society is concerned the matter involves a turn-over of $100,000, and it is a nice point as to whether the association is not forming an illegal conspiracy in restraint of trade. We shall know better later.

But the point of the matter is that the co-operatives will have very little difficulty in providing passable substitutes for any of these brands under marks of their own. In this sleepy old country the art of substitution has been carried far. I can turn to the advertisements of "specialists" who announce their willingness to supply cough-mixture to match Barker's, of soft-soap to equal Saunder's, or almost anything to the pattern of anybody else. What they have not got ready the specialists will speedily compound, or supply a receipt for, after a day or two for careful analysis. We do not take these professors entirely at their own valuation, but in these days secrets are ill to keep, and there is considerable transference of them.

Dewsbury, in Yorkshire, from whence a fair proportion of Canada's imports of woolens come, is in arms against the new proposal of the German Government. This is no less than the application of an export tax on rags, equal to sixty cents per 112 pounds. Dewsbury is Rag Fair, and its rag buyers scavenge even in Siberia for the raw material for woolen goods. Between woolen and wool an important difference lies, which the least experienced may detect. Whether, having the rest of the wide world to draw from, the German action can have much effect on English prices remains to be seen. The proposal is one, however, that is worthy of note.

The worst of pension funds provided by employing firms or companies is that they tend to insolvency in a disturbing manner. A few months ago it was discerned that the Railways Clearing House fund, to which various of our railroads are tributaries, was a half-million or so to the bad. But the deficit actuarially ascertained on the superannuation fund of the Midland Railway appreciably exceeds four million dollars. Perhaps the workers will not lose, as the companies are distinctly solvent, yet the instances are not without their

The Manufacture of Satisfaction.

SATISFACTION is the secret of successlul business. It doesn't matter how large or how small your business may be, it takes satisfaction to run it—genuine satisfaction—your customers' satisfaction.

Thus every progressive retailer is in one sense a manufacturer. He is continually manufacturing satisfaction with which to carry on his business. Some retailers, like the drones in the hive, let the other fellows do the hustling. These soon lose what honey they might have had.

Now in order to manufacture anything substantial (and satisfaction certainly is substantial), it is necessary to know where to get the material at the closest price for a reliable article. That's where I come in, I supply you with the best that's made

IN FURS AND FUR GARMENTS

PAQUET Furs are manufactured from the best selected raw skins, right in my own actory, which is the largest in Canada and one of the largest in the world. I have always on hand a stock of raw skins, ready to cut at a moment's notice. I can make up special orders to please your customers' individual tastes. Could anything be more suitable for the production of good solid satisfaction? Paquet styles are "up to the minute."

Travellers are now on the road—wait for them.

significance. When the funds are in a bad way there is inevitably a certain temptation to prevent claims upon them. One ought not to make definite allegations without substantial evidence behind them and I name no names. But I have in mind the name of a particular police administration and a record of some occurrences in its working which lend vivid color to the belief that some parties are not too scrupulous in inventing means of disappointing elderly officers of a well-earned and long anticipated provision for old age.

All this is without prejudice to the statement which follows, and details the arrangements made by the benevolent Cadbury Bros., of Birmingham, for the benefit of their workpeople. Employees pay from 2½ to 5 per cent. of their weekly earnings to a fund to which the employers contribute an equal amount. The pension receivable is 1 per cent. of the total wages in respect of which he has made contribution. Thus the allowance is proportioned to length of service, and an employee who has paid for 30 years and has attained age 60 receives $30 for every $100 of wages. If he survives only 2½ years his heirs get back all that he has paid as contributions. Premature death brings the return of contributions with interest compounded at 2½ per cent. And if a pensioner dies without getting back the whole of his own, the balance with interest is payable to his relatives, Trustees appointed in part by the firm and in part by the employees manage the fund. None of it may be invested in the business, and as an initial capital it receives an advance of $300,000 from the company. One grows a little sceptical before this spread of good promises, but an eminent actuary vouches for the scheme as sound and likely to provide surplusages periodically. There is no fear of all employers doing the like or there might be sensations in the industrial life assurance world.

Extraordinary advertisements find their way into the English papers. One that ought to interest a farming community pleads for the assistance of capitalists to revolutionize farming, and to "rear up the spiral of this most honored industry once more." That is the unpremeditated humour of a German, but our own people can be funny unconsciously as well. The story is a classic one, which relates how a grocer boldly labelled his eggs "unapproachable." Like other items of tradition it may be untrue, but to-day I have seen the shop legend "our carpets cannot be beaten."

NORTH COUNTRY.

Manchester, April 18th.

* * *

SUBURBAN TRAIN AND ELECTRIC SERVICES.

No wonder that Toronto business men are bringing the matter of the entrance of the radial roads into the city to the attention of the mayor, and no wonder that they are asking that some plan may be settled upon promptly. It has been allowed to drag along far too long a time already. Hamilton and some other Canadian cities, as well as numbers of them across the line can give Toronto pointers on the great value, on the necessity, indeed, in these days, of having good and frequent access to and fro between themselevs and the town and villages within a radius of twenty or more miles. Business men recognize that it is a hard proposition to deal with in view of the grasping attitude on many occasions of the Toronto Street Railway. But this should not prevent the best legal brains of the city being put to work at a solution which shall protect itself as well as give its own people and those in neighboring communities the great boon asked for. Almost any settlement, so long as the city does not throw itself into the arms of local electric line, would be welcomed in place of this apparently everlasting delay.

The London City & Midland Bank, Limited

ESTABLISHED 1836.

Paid-up Capital $15,714,250
Reserve Fund $15,714,250

HEAD OFFICE: THREADNEEDLE ST., LONDON, ENGLAND.

The Traders Bank of Canada

Notice is hereby given that it is the intention of the Traders Bank of Canada, after publication of this notice for four weeks in the "Canada Gazette" and in a newspaper published in the City of Toronto, to apply to the Treasury Board for a certificate approving of the following by-law of The Traders Bank of Canada:

At a special General Meeting of the Shareholders of the Traders Bank of Canada, held at the Head Office of the Bank, in Toronto, on the 17th April, 1906, the following By-law was passed:

BY-LAW NO. 14

A BY-LAW TO INCREASE THE CAPITAL STOCK OF THE TRADERS BANK OF CANADA.

WHEREAS the capital stock of The Traders Bank of Canada is $3,000,000, divided into 30,000 shares of $100 each, the whole amount of which has been taken up;

AND WHEREAS the greatly increased business of the Traders Bank of Canada necessitates provision for a larger amount of money than is now at the command of the Bank;

AND WHEREAS the extending of the Bank's operations to Manitoba and the Western Provinces having been determined upon and premises opened, greater facilities are required on the part of the Bank for carrying on its business in these localities;

AND WHEREAS the future prospects of the Bank appear to warrant such reasonable increase of capital as will meet the present and immediate future requirements of the Bank's operations;

BE IT THEREFORE ENACTED by the shareholders of the Bank assembled at the Special Meeting held at the Head Office of the Traders Bank of Canada, the 17th day of April, 1906;

(1) THAT the capital stock of The Traders Bank of Canada be, and the same is hereby, increased by the sum of Two million dollars, divided into 20,000 shares of $100 each.

(2) When the directors so determine, and from time to time as they think fit, the said increased stock shall be allotted to the then shareholders of the Bank pro rata, and at such rate as is fixed by the directors, but no fraction of a share shall be so allotted; provided that in no case shall a rate be fixed by the directors which shall make the premium (if any) paid or payable on such stock so allotted exceed the percentage which the reserve fund of the Bank then bears to the paid-up stock thereof.

(3) Any stock allotted from time to time which is not taken up by the shareholder to whom such allotment has been made within six months of the time the notice of the allotment has been mailed to his address, or which any shareholder declines to accept, or, any shares which shall not be alloted by reason of the provision hereinbefore contained against the allotment of fractions of a share, may be offered for subscription to the public, at such time, in such manner, and on such terms as the directors may prescribe.

Around Montreal the Canadian Pacific Railway has inaugurated a comparatievly new form of service which might easily, we imagine, be followed in Ontario with advantage. It already has a motor car service, we understand, between Montreal and Vaudreuil. But the new accommodation to which we refer now is a special train service to the river resorts of Lachute and to St. Eustache. These trains, which leave at convenient hours morning and evening, will doubtless prove a great boon to business men desiring to avail themselves of country rest and recreations at the same time that they possess easy access to their daily labors. Within reach of Toronto there are many charming spots calculated to attract people in the same way if only they possessed a reasonably good train service. We commend the idea to the Grand Trunk and Canadian Pacific Railways.

* * *

ANSWERS TO ENQUIRERS.

Book-keeper, London.—According to the Blue Book of Loan Companies and Building Societies for the year 1904 there were at the close of that year twenty-nine such societies, having headquarters in Toronto. One of these, the York County Loan, is now in the hands of a liquidator. There were forty more in Ontario, and fourteen in various other provinces reporting to the Dominion Government. These 83 companies had $51,317,000 of paid up capital and $15,650,000 of reserve funds, making about $67,000,000 due to stockholders. Then they owed to depositors $21,353,000; to debenture holders in Canada $20,052,000, and in Britain $35,137,000, besides debenture stock, making in all about $80,000,000 due to the public. Their total assets were $176,885,000, of which $127,228,000 or say 72 per cent. consisted of loans on mortgage of real property. The value of real estate so loaned upon is given at $226,184,000, so that the margin of value in the realty was 43.75 over the amount loaned.

M. L., St. Gilles, Bruxelles.—Will consider your proposition and write you via New York by another mail. The position is so far unfilled.

J. E. B., Montreal.—We had not heard of the matter further than the original and very indefinite report. Would advise your writing to the Minister of Mines. The fact is that so many proofs accumulate, year by year, of the richness of Canada in minerals that we need hardly be surprised at any reported discoveries in this direction.

Agent, Toronto, asks if there are any life companies in the United States "which do a teetotal business like the United Kingdom Temperance and General," that is to say which give better terms to abstainers from beer, wine, and spirits than to those who drink them. We answer that we have heard of one such, the American Temperance Life, of New York, which so discriminates. In different years it has shown results that enabled it to write abstainers' lives from 20 to 30 per cent. less than the general class. It is not an old company, having been formed, we are told, about 1900, nor a large one, but it is said to be well conducted and to have good prospects.

* * *

STRATFORD BOARD OF TRADE.

The annual meeting of the Stratford Board of Trade was held last week, there being a fair attendance. The gentlemen whose names follow were re-elected officers for the ensuing year:—President, Ald. McIlhargey; vice-president, W. J. Mooney; secretary, James Steele; treasurer, Wm. Maynard; auditor, George Kay; council, D. M. Ferguson, George McLagan, T. Ballantyne, Jr., Wm. Maynard, I. W. Steinhoff, Wm. Preston, J. D. McCrimmon, Joseph Orr, E. T. Dufton, Andrew Tilley, J. R. MacDonald, John Whyte. At the meeting, the chair was occupied by Mr. W. Preston, the vice-president, in the absence of the president. The report of the latter gentleman, which was submitted, showed that the past year had been marked by continued growth and progress in the affairs of the city. Many municipal improvements had been made and, he said, a spirit of friendly rivalry created among the residents of the various streets, to secure creditable permanent roads and sidewalks. Another cause for congratulation was the supply of beautiful spring water for the waterworks. Large extensions of the water mains had also been made throughout the city. There is a comfortable feeling of optimism in the air of Stratford which gives a visitor a good impression. A great deal had been done in the way of railroad development work, and more is expected during the next year or two. The board has made renewed efforts to secure manufacturing industries for the city during the year, though on the whole these efforts had not been so successful as was hoped. The president expressed an opinion in favor of purchasing the lighting plant. He also favored the idea of a municipal electric power plant at Niagara Falls.

Shipments of ore from Rossland district, B.C., last week were as follows: Centre Star, 3,690 tons; Leroi, 24,730; Leroi, No. 2, 450; total for week, 6,870. For the year up to date, 107,065 tons.

We hear of the embarrassment of S. Gold & Co., doing business as manufacturers of clothing in a small way in Montreal. They are endeavoring to effect a compromise at 40 cents on the dollar, 25 cents payable in cash, and 15 cents in three months. Mr. Gold was formerly of the firm of Gold Bros. & Cohen, who became involved in May, 1905, when an arrangement was made with creditors at 50 cents on the dollar.

We have already given some stanzas of a poem by one of the sweet singers of the Great Clay Belt exalting the horn of the Cobalt district. Here are two more from H. R. H. in the "Herald":

From Temagami to Liskeard
  The mountain streams will sing
The wealth and fame of Cobalt
  That will herald in the spring.

The bloom is like the red rose,
  And Cobalt's sure to bring
The greatest band of miners
  Ever gathered in the spring.

No. 181. Office Chair. **$8.50**

JOHN KAY, SON & COMPANY, Limited.
36 and 38 KING STREET WEST, TORONTO.

—Since remarking, as we did, a fortnight ago upon the celebration by Vancouver of her twentieth birthday, we have received the latest pamphlet descriptive of that city, issued by the Tourist Association. It contains much information in small compass, and the facts of the city's growth and present status are emphasized in a striking way. Especially are the illustrations to be commended: they are delicately and at the same time clearly done. And very attractive scenes do some of them depict. Tourist Associations elsewhere might with advantage take pattern by the Vancouver body in paying close attention to the pictorial part of their publications, for pictures do much to attract the tourist, just as they do much to inform the man who has scant time to read lengthy prose descriptions.

The Merchants Bank of Canada

Notice is hereby given that a dividend of 3½ per cent. for the current half-year, being at the rate of 7 per cent. per annum upon the Paid-up Capital Stock of this Institution, has been declared, and that the same will be payable at its Banking House in this city, on and after

Friday the 1st day of June Next.

The Transfer Books will be closed from the 17th to the 31st day of May next, both days inclusive.

The Annual General meeting of Shareholders will be held at the Banking House, in the City of Montreal, on

Wednesday the 20th day of June

next. The Chair will be taken at 12 o'clock, noon.

By order of the Board,
E. F. HEBDEN,
General Manager.

As an . . . Investment

We believe our 5% **DEBENTURES** to be one of the safest and surest that you could possibly enter into. It is safer than a Bank, because you have all of our Permanent Capital Stock, and the whole of our Assets, consisting of first mortgages on improved real estate, as a guarantee behind the Debenture. It is the surest, because the half-yearly coupons are attached to the Debenture and can be cashed at any bank in the country. . . . .
Write to-day for our booklet, entitled, "An Investment of Safety and Profit."

"An experienced Canadian Banker would like to form a connection with any new Bank now being organized. A high executive position only desired or considered." Address Box No. 15, Monetary Times.

A report is current that a company is being formed by English and Canadian capitalists, and backed, it is said, by the White Pass and Yukon Co., to tap the rich mineral fields of Alaska. According to this report, the road is to run from Cordova Bay into the Tanana Valley, cutting out the proposed Alaska railroad, known as the Burleigh road, in that region. Close Bros., of London, and S. H. Graves, of Chicago, are said to be working in the new Canadian company's interests.

Mercantile Summary.

Messrs. Charles S. Warren and James Hay, of Woodstock, Ont., have organized a company to be known as the Warren Church Organ Co. to build a factory for the manufacture of the same at Woodstock.

Retired Publican (explaining details of his new mansion)—I'd like to 'ave two statues at the foot of the stairs. Architect—What kind of statues would you like? Retired Publican—I'd like Apollo on one side and Apollinaris on the other.—Tatler.

Mr. N. Wickett, of New Liskeard, has sold his general retail store and stock to Frank Heasman, of Barrie, who, the "Herald" says, is an experienced merchant and capable business man, an acquisition to Whitewood Avenue and district public, and to the Board of Trade.

An illustration of what comes of a "boom" is given by the "Herald," which relates the sale of the Vendome Hotel at Haileybury, on Lake Temiskaming, by Mr. Jake Gaudaur to Messrs. C. Wettlaufer, of Buffalo, and A. R. Newton, of Kansas City, for $40,000. The price paid for it by Gaudaur a few weeks before was $17,000.

A company has been formed under an Ontario Government charter, and called the Dominion Office and Store-fitting Co., Limited, for the purpose of manufacturing, selling and dealing in office and store fittings and articles of a similar nature. D. H. Gillies and C. R Somerville, of London, Ont., are among the provisional directors. The authorized capital of the new company is placed at $40,000.

The Hillcrest Railway Coal and Coke Company is applying to Parliament for power to construct and operate a line of railway from a point near Morrisey, B.C., through Crow's Nest Pass to somewhere near Hillcrest Junction, thence to Cardston, Alta., with branch lines to Pincher Creek, as well as to certain coal deposits in a neighboring township and to the oil fields situate near Little Kootenay Lakes, Alta.; also for authority to operate coal mines and oil properties and to construct pipe lines, etc.

The residents of Campbellton, N.B., are up in arms against what they are told is likely to happen on the Intercolonial Railway, namely, the reduction of the force of hands in the railway shops there. And the Board of Trade of that place has actually appointed a committee to make a protest against the reduction. Surely there must be some adequate reason for the contemplated move, and it is irrational to expect a railroad fifteen hundred miles in length to be conducted in detail with reference to the local conveniences of particular places. As well might St. Flavie, which is to be benefited by the transfer of some men to its shops, send a committee to Moncton to thank the general manager.

TRUSTEE AND ESTATE INVESTMENTS

WRITE US FOR BOOKLET AND LATEST LIST OF OFFERINGS.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

The premises of Granger & Freres, wholesale stationers, Montreal, collapsed early Sunday morning last. The stock is described as being completely ruined. The loss is estimated at over $100,000.

The steamer "Imur" arrived at San Francisco last Sunday from Victoria, B.C., with 500 tons of provisions, given by the people of British Columbia. The cargo was admitted duty free. This is one gift, at least, which the Cabinet of the United States, now feeling so wealthy and self-sufficing, has not been able to refuse. We are glad it reached the stricken city and fed the hungry.

From three o'clock on Saturday afternoon to five on Sunday five steamers entered the harbor of Montreal. They were the steamship "Marina," of the Donaldson Line, from Glasgow; steamship "Montfort," of the C.P.R. Line, from Bristol; steamship "Ontarian," of the Allan Line, from Glasgow; steamship "Turcoman," of the Dominion Line, from Bristol, and the steamship "Orthia," of the Donaldson Line, from Glasgow.

We hear from Montreal that the charter rights for gas for the city of Quebec, which were acquired by the Montreal Light, Heat and Power Company when they absorbed the Standard Light and Power Company, have been conveyed to Mr. Emerson McMillan, of New York, president of the American Light and Traction Company. The new gas plant, it is believed, will be operated by the Quebec Jacques Cartier Electric Company, which is a subsidiary company of the American Light and Traction Company.

We are interested in hearing that the publishers of the attractive monthly, "Canada First," have resolved to form a joint stock company, to be called the Canada First Publishing Company, Limited, in order to further improve and extend the field of their magazine. Of the total authorized $24,000 is being issued in ten dollar shares. There are probably many who will like to assist in the development of so promising a work by subscribing for five, ten or any other number of shares. The magazine, we are told, is already well distributed over Canada.

A point of difficulty has arisen in connection with the British Columbia Government's new Act regarding timber cut on ungranted lands of the Crown, and making it compulsory for it to be used in the Province. Mr. J. S. Emerson owned some $7,000 worth of logs which were seized by the Government on this count. If the word "cut" is prospective the Government loses, and if it is retrospective Mr. Emerson loses. It is the contention of Mr. Taylor that as the seized logs were cut before the Act was passed its terms are not applicable in this instance, and that they only hold good in respect to logs cut after the passage of the Act.

The Toronto General Trusts Corporation

ACTS AS

EXECUTOR

OR

ADMINISTRATOR

The officers of the Corporation will be pleased to consult at any time with those who contemplate availing themselves of the services of a Trust Company. All communications will be treated as strictly confidential.

Wills appointing the Corporation Executor are received for safe keeping FREE OF CHARGE.

Mercantile Summary.

The Canadian Pacific Railway has filed plans for the extension of its line between Port Burwell and Ingersoll, through the county of Oxford, to Stratford. Construction is to begin at once.

The failure is reported of George W. Knapp, of Smith's Falls, Ont. He was formerly a carter, and started to keep store in March, 1903. His trade was a small one, and liabilities are not estimated to exceed $1,500.

By way of Vancouver last week there was shipped over 1,000 tons of marble from Shakan Bay, Alaska. It is on its way to the Eastern States by the C.P.R. and Soo lines. It must be of uncommon attractiveness to be transported so far.

It is a question whether the yield of the maple sugar crop in the Eastern Townships is a good one. Many sugar-makers claim that the season was fully up to the average, while others complain that it was a poor and disappointing season. The sugar was good, however.

J. G. Routhier, a small dry goods retailer, of Quebec city, has made a judicial abandonment of his estate, and a meeting of his creditors is called for May 4th.—Gaspard Bernier, a saloon-keeper of the same city, has also assigned, with liabilities amounting to $1,900.

The compressor plant of the War Eagle mine, Rossland, B.C., is to be moved, we understand, to the Centre Star, and to the plant of the latter is to be added a 650 horse-power motor. The erection of a hoisting plant also is to be proceeded with, to be the largest in British Columbia.

An assignment has been made by Mrs. Benj. McLeod, of Harcourt, N.B. She is the wife of a local blacksmith, and opened on a small scale in dry goods on her own account about four years ago. She has apparently little talent for business, and has been more or less slow for some time past. She is said to owe as much as $3,000.

A hardware dealer and grocer of Harbor Grace, Nfld., H. H. Parsons, is applying to the court to be declared insolvent, and Thomas Smyth, of St. Johns, has been appointed trustee. Parsons was not a new beginner; he had been some ten years in business, and failed about 1901, his liabilities then being some $4,000.—Charles Moyles, a general dealer of Lewisport, Nfld., is also petitioning to be declared insolvent.

An assignment has been made by Joseph Lafrance, a Montreal plumber, who is said to owe $15,300. He has been actively in business for a number of years, but has been unsuccessful in the past, and for some time had to use another person's name as a cover.—A voluntary assignment has also been made by J. Albert Long, grocer, in Montreal. He started business just two years ago after a lengthy experience as a clerk. Liabilities are reported at about $3,500.

Mercantile Summary.

A handsome warehouse of nine stories is to be erected in Montreal by Messrs. Mark Fisher & Sons at the south-west corner of Victoria Square and Craig Street. The material selected for the building is Indiana limestone.

A meeting is to be held on May 4th of the creditors of Mrs. J. R. Morin, general storekeeper, at St. Romain, in the Lake Megantic district, south of Quebec. The liabilities are said to reach $24,800, and the assets consist of stock, $12,000, some $8,000 in book debts, a farm worth about $2,000, and several lots of land of uncertain value. For so small a place Mrs. Morin seems to have aimed at a very considerable business.

The steamship "Ontarian," of the Allan Line, from Glasgow April 14th, was the first trans-Atlantic vessel to reach Quebec this year, which she did on Friday last. The first arrival from the sea at Montreal last year was that of the steamship "Ionian," of the Allan Line, which came in on May 4th. The first arrival this season in Montreal harbor, the steamship "Marina," is thus four days ahead of last season.

Still more of Canada's lumber in the Far West is falling into the hands of American capitalists. Some 6,000 acres of timber land near Nanaimo have, we hear, just been purchased by a Seattle firm for $37,500. It is understood that the firm will erect a large lumber mill there. An American company has been formed in the Province, at the head of which is the Portland patentee of a system of rafting. The capital is $200,000, and the company will use the Robertson patent raft for transporting all kinds of lumber from British Columbia to Southern California and other markets. It proposes to construct these rafts in the Fraser River, then to have them towed to Chemainus and other lumber yards and loaded. Each raft is to cost $7 000, and will be towed by steam colliers. They will be 1,000 feet in length, 75 feet in breadth, and will draw 23 feet of water. The logs used will be from eight inches to two feet in diameter at the top. A deckload of 2,000,000 or 4,000,000 feet of sawed lumber will be received on the raft also. Spokane capitalists are said to have completed the purchase of seventeen square miles of coal lands in the Province for $100,000.

A saw-mill plant is to be erected in the Berkeley Valley district, one of the most fertile agricultural and richest mineral districts we believe in British Columbia. The difficulty of obtaining lumber has been one of the most aggravating obstacles to the growth of this section of the country heretofore. Now, settlers will be able to purchase lumber at Aldermere, almost in the centre of the valley.

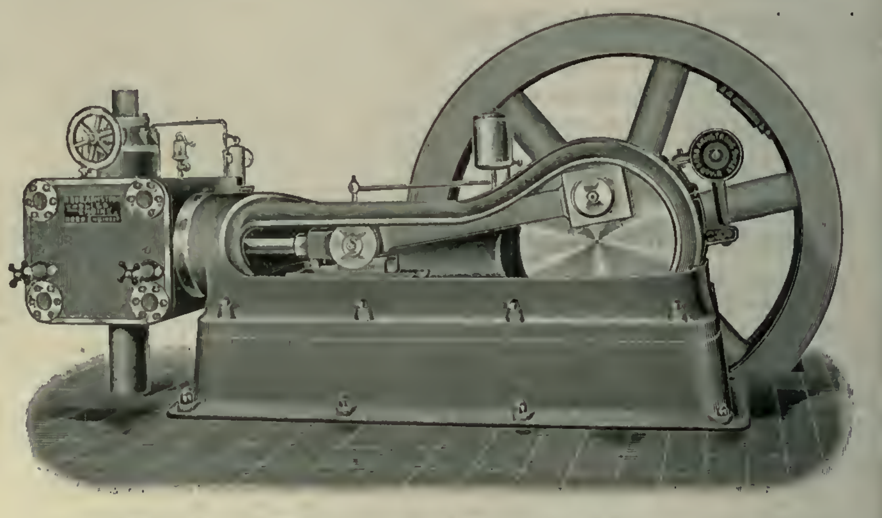
During the summer of 1905 W. S. Carruthers started as a boot and shoe retailer in Ottawa. He has already assigned to F. X. Laderoute. He was originally a purser on a steamer, and began general storekeeping at Barwick, in the Rainy River district, in the fall of 1903. He was unfortunate in being burned out the following year, with partial insurance, and then made a compromise arrangement.

A few days ago three hundred and fifty school teachers of a county in Pennsylvania were subjected to a test in spelling. Only thirteen words were given them, all common words in general use. Only one teacher passed the test successfully. The words were auxiliary, Tennessee, beefsteak, proceed, supercede, precede, picnicking, sieve, siege, cylinder, succotash, and dessicated. Upon which the Hamilton "Times" comments as follows: The "Times" has often said that the science of correct spelling is a gift, like that of music. No amount of education will make a person a good speller if he has not a natural aptitude for spelling.

Albert Fogarty, of Montreal, doing business as an electrical contractor under the style of Fogarty Bros., has assigned, and is stated to owe $7,750. He shows nominal assets of $11,400, the principal item being shares in the recently organized North River Power Co., Limited, of Lachute, Que., to the amount of $8,600, allotted to him for the transfer of his rights in the power and plant at Lachute.

At the Canadian Government Office, 17 Victoria Street, London, S.W., recent enquiries have been made in that city by a provision dealer and produce broker, who has asked for Canadian exporters of eggs. And a firm of coffee and tea merchants in London would correspond with Canadian firms about a buying agency for their special coffee essence. A correspondent in Russia has asked to be furnished with names of likely firms in Canada to undertake the erection of factories on special lines invented by himself for the manufacture of turpentine. A Bordeaux (France) firm, interested in the export of dried fruits, sardines, olive oil, preserved vegetables, etc., wants some Montreal firm who will act as agents for the sale of these goods to wholesale grocers and others.

NOT ONE CENT FOR REPAIRS



An experienced engineer has written us as follows: "After eighteen months of hard service, the 'Robb' engines are in excellent shape, running very smooth and without a bit of vibration. Up to this time, they have not cost one cent for repairs, the only expense being steam, oil, and packing, and this below the average. Perfect alignment, parts well machined and good design make the 'Robb' the most economical and labour saving engine that has ever come to my notice."

Mercantile Summary.

The Hamilton and Toronto Sewer Pipe Company's premises in Hamilton were destroyed by fire on Wednesday at a loss of $50,000, covered by insurance. On the same day there was a minor fire in the offices of the London and St. Thomas Rag and Metal Co., at London, but not very much damage was done.

It is reported from Charlottetown, P.E.I., that Ronald McDonald, for many years engaged in the coal and shipping business, has become insolvent, and that his affairs are likely to turn out badly. His troubles are said to be largely due to the purchase of a steamer several years ago, which netted him considerable loss.

A despatch from Cobalt, Northern Ontario, says that La Rose Company have purchased the old Wright mine on the Quebec side of Lake Temiskaming. This is said to be the oldest mine in Canada. The Wright mine is a galena proposition, and it is said to be possible that its ores may be used in a smelter to be erected for the treatment of Cobalt ores, lead being used as a flux. The company contemplate the erection of a concentrator.

An agent in Halifax would like to represent English firms exporting preserved fruits, jams, and kindred lines; and a manufacturer's representative at Toronto would like the Canadian agency of English manufacturers of hardware, novelties, laces and braids. Both these have been writing the Canadian Agency in London, where enquiry has been received from a Hamilton, Ont., firm for addresses of English makers of glass globes, which are used on enclosed arc lamps. It is also stated that a Nova Scotia firm desires to correspond with manufacturing chemists who buy seaweed ash or iodine made therefrom.

Messrs. Fetherstonhaugh & Co., patent agents, of Toronto and elsewhere, send us the following list of Canadian patents: G. F. Bishopric, Toronto, packing cases; P. Lord, Montreal, nut locks; G. F. Baguley, Toronto, broilers; W. R. Hampden, Toronto, heating stoves; H. H. Vaughan, Montreal, car structures and bolsters, bolsters for railway cars; T. J. Best, Montreal, hot water furnace; O. Higel, Toronto, metal piano action flanges; C. H. Vogel, Ottawa, digesters; A. E. Lugsdin, Toronto, apparatus for use in photo process work; W. A. Parkinson, Toronto, fenders; A. A. Crepeau, Drummondville, Que., steam engines; T. Hutchison, Montreal, cigarettes and boxes therefor; E. C. Overholt, Hamilton, Ont.; wire fence locks; J. E. Saucier, Montreal, trolleys; I. P. Doolittle, Toronto, cut-off valves; W. W. Marsh and C. H. Hackett, Waterloo, Ont., liners for centrifugal liquid; G. E. Clarke, Toronto, doors and gates; E. W. Evans, Marysville, B.C., rock drills; E. P. Lessard, St. Pierre, Que., sap-bucket cover fastenings; Whiteside, Lulu Island, B.C., solder cutting machines.

Debentures for Sale

The undersigned is prepared to receive tenders for the purchase of debentures of Drainage District No. 5 in the Province of Manitoba to the amount of $162,000.00 and of Drainage District No. 15 in the said Province to the amount of $22,000.00, said debentures being in denominations of $1,000.00 each, dated July 1st, 1906, payable in thirty years from the date thereof at the Union Bank of Canada, in the City of Montreal, and bearing interest at the rate of 4% per annum, payable half-yearly. These debentures are issued under the provisions of "The Land Drainage Act," and are guaranteed by the Province of Manitoba.

Tenders will also be received for debentures of the Central Judicial District in the said Province to the amount of $22,000.00, dated July 1st, 1906, payable on January 1st, 1924, at the Union Bank of Canada in the City of Montreal, and bearing interest at the rate of 4% per annum payable half-yearly.

All offers must be addresed to the undersigned, and marked "Tender for Debentures," and must reach this office not later than the 1st day of June, 1906.

Delivery and payment of debentures to be made in Winnipeg.

J. H. AGNEW,
Provincial Treasurer.
Provincial Treasurer's Office,
Winnipeg, Man.

A syndicate of Boston, Toronto and Orillia capitalists has, we hear, taken over the Dickson Lumber Company's interests in Peterborough and Lakefield, Ont., and their timber limits in Anstruther and Cavendish.

The street car lines of Pueblo, Mexico, owned by Warner, Beit & Co., of London, Eng., have, we understand, been purchased by a Canadian syndicate, who will put in electric power and add considerable mileage to the line.

So greatly is the traffic of the Montreal Street Railway Company growing that the Canadian Westinghouse Company, Limited, has been awarded a contract by that company for a large amount of apparatus. The order included twenty quadruple equipments of 101-B railway motors, complete with controllers and details; also a 1,000 kw. 600 volt, direct-current engine type generator for installation in their main power house, and three 500 kw., three-bearing, motor-generator sets.

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

Work is being resumed at the Bruce copper mines in Algoma district after a close down of four years. The present owners are the Copper Mining and Smelting Co. of Ontario, composed largely of English capitalists. A large quantity of machinery is installed at the mines, and it is said to be in good condition, besides which there is a large concentrating mill. It is stated also that a smelter is to be built.

A serious fire of the week was when the Toronto General Post-office was, early Sunday morning last, partly destroyed, the main floor being practically gutted. The loss is estimated at over $25,000, and, as the Dominion Government provides a special fund to recoup such losses, there was no insurance. The fireman of the building, named George Le Tray, was killed by suffocation. Mr. George Ross, the chief superintendent, and several members of his family only barely escaped with their lives. A temporary post-office has been fitted up opposite the Queen's Hotel. The destruction or detention of mail matter has been surprisingly light.

In last week's issue of the "Colonial Standard" we find notice of a company incorporated in Nova Scotia last month for the manufacture of fertilizer, under the name of "The Old English Fertilizer Co., Limited," whose works and offices are to be situated at Pugwash, N.S., capital $100,000. It purposes to make the old English fertilizer. Machinery is being imported from England, and the services of James W. Buckley, a famous English expert, have been secured to operate the mixing plant. A great advantage is that the main constituents used in the manufacture of fertilizers are found in the Provinces. Bone, gypsum, lime, and other material from the Maritime Provinces "are at present being shipped from the Provinces to New York and Philadelphia, to be used in the manufacture of fertilizer, which is shipped back here for the use of the farmers." Dog fish, fish offal, etc., can be used in this factory. The enterprise should prove a good one for our Pictou county district and beyond.

The first boat from the Dominion Coal Company's mines in Cape Breton for the season arrived in Montreal last week with a full cargo of coal. A heavy season's business is expected, and the coming summer will see general activity. It is estimated that a fleet of thirty-five boats will be engaged in carrying coal during the open season. The outlay this season in operating the mines, it is said, will be considerable, as the company is determined to rush matters so as to be in a position next autumn to show an unprecedented year's delivery. The accommodation and equipment in Montreal for the rapid handling of cargoes have been greatly augmented by the erection of two additional coal towers, while special facilities for delivery have also been provided.

* * *

TORONTO MARKETS.

Toronto, May 3, 1906.

Breadstuffs.—Not very much business is passing either in flour or grains, and prices remain much as last quoted. Bran and shorts are still high, but a little easier than they were. The usual quotation for ninety per cent. patent flour is $3.10, in buyers' bags.

Dry Goods.—Since last report no new feature has developed under this heading, but it may be said that the trade continues in a generally satisfactory condition, with a good, brisk demand and prices steady. Travellers report that there is a buoyant feeling in the air which is bound to help in making the season's trading a good record. Woolen and cotton staple goods continue very firm indeed, and linens even more so. The call for dress goods of a seasonable nature bids fair to be larger than usual, while the sales of millinery have been certainly larger than usual up to date.

Fruits and Vegetables.—Not much has been done in this line since Easter, though prices have continued good. Oranges have been in fair demand, especially California navels. Lemons are scarce. Bananas are firm, and quite high. Not many tomatoes are coming in just now, and prices keep high. Apples are almost out of the market, some holders refusing to sell at any price.

Live Stock.—Exporters' cattle were in only moderate supply at this week's market, but the demand was not over brisk. For choice butchers' there was a fair demand, and all those offered sold readily enough. More activity is to be noted in the call for stockers and feeders, though prices as yet are unchanged. Milch cows are quiet. Sheep hold steady, and there is a pretty brisk trade in lambs. Hogs are firm.

Provisions.—An easier tone is discernible in butter. New cheese is coming in in larger quantities. Eggs are steady at 15½ to 16c. for new laid. Poultry is not coming in in large quantities, but prices are steady.

In the Great-West Life Assurance Company the cost of Life insurance is reduced to a minimum, for the very obvious reason that all available funds are invested at an unusually high rate of interest on absolutely safe security.

(Vide Annual Report for 1905.)

So extensively have the benefits of Great-West Life Insurance been recognised that over $25,000,000 of business is now in force.

The Great-West Life Assurance Company,

MONTREAL MARKETS.

Montreal, May 2, 1906.

Ashes.—Though there is as yet little evidence of any special revival in the demand, the market is rather firmer, owing to the opening of navigation, and dealers are disposed to concede better figures. We quote: No. 1 pots at $5.25 to $5.30; seconds, $4.75 to $4.80. A couple of small sales of pearls have been made lately at about $6.75, and we quote $6.75 to $7 per cental.

Dairy Products.—Values in these lines show further marked decline. Especially is this the case with butter, large receipts of new fodder goods being reported, and fine creamery is now down to 18½ to 18¾c. In cheese there is a fair demand for white, but values rule easy at 10¾ to 11c. for fine makes.

Dry Goods.—The 4th of May is a pretty heavy day for retail payments, but up to the moment of writing there have been few applications for renewal indulgence, and general collections are coming in very well. Sorting business continues fair, but the late chilly and damp days have not been favorable to city retail trade. Values of textile wares all continue firm, and late advices from linen manufacturing circles predict a strong advance in prices.

Flour, etc.—There is an improved demand for flour, now that navigation is in full swing, and the market has a firm tone, prices of Manitoba spring wheat grades showing some advance. We quote: Manitoba spring patents, $4.40 to $4.60; strong bakers', $4 to $4.10; winter wheat patents, $4.10 to $4.30; straight roller, $3.90 to $4. Bran is in light supply, and quotes at $18.50 to $20 a ton. Rolled oats, $1.95 per bag.

Groceries.—The river lines of steamers are now in commission, and improvement is noted in the distribution of general groceries. Sugars have recovered the last decline of 10c. a cental, owing to a stronger market in New York, where some considerable speculative buying of raws is reported, but if the sowing of beets is as large as figured it is considered hardly likely that much material advance will be witnessed. The demand for teas is more active, and there is a real scarcity of Ceylon greens. Prices for new crop Japans are not yet to hand. Canned goods are excellent property to hold, and tomatoes have now advanced to $1.30; strawberries are hard to get, and stocks of pears and peaches are running low. Gallon apples are quoted at $2.50, and for evaporated apples, 12 to 12½c. is now asked. Good red salmon is getting scarce and dear, $5.60 being now asked for same. Currants are advanced ¼c., and selected Valencia raisins are firm at 5c.

Hides.—There is a general firming up in the market. Lambskins are advanced this week to 15c. each. Calfskins are also higher at 14c. per lb. for No. 1, and 12c. for No. 2. For No. 1 beef hides dealers are quoting 11 to 11½c. as

Metals and Hardware.—New supplies of pig iron are now to hand, and No. 1 Summerlee is quoted at $21.50, ex-wharf, net terms, and No. 3 Cleveland at $18; domestic brands are quoted at about $21. Bars are unchanged at $2 to $2.05, and nails at $2.10 for cut, and $2.15 for wire. Boiler plate is easier at $2.30 for quarter inch and thicker; iron pipe is unaltered. There has not as yet been any change in tinplates, $4 being the figure for cokes, and $4.25 for charcoals of standard weight and brand; Canada plates, $2.60; black sheets, $2.40 for 28 gauge; galvanized sheets, $4.20 to $4.45; Ternes, $6.85. Ingot tin in firm at 43½ to 44c.; copper, 20½ to 21c.; lead, a little easier at $4.25 to $4.35; sheet ditto, $5.25 to $5.50; zinc, 6¾ to 7c.; of antimony, stocks are completely exhausted.

Oils, Paints, etc.—Business in these lines holds very good. Turpentine is easier at 93c. per gallon, in single barrels. Linseed oil is pretty firmly held at 55c. for raw and 58c. for boiled. Fish oils are little asked for; castor, 8 to 9c. New supplies of glass are near at hand, and prices are unaltered. Leads and putty are also as last quoted.

* * *

THE TEXTILE CENTRES.

A correspondent in Yorkshire states that there seems to be very little that is really new in connection with the textile trade of the West Riding, and things are proceeding apace. An air of activity pervades everything, and in every direction the clatter of spindles and looms can be heard. In Batley, Dewsbury, Huddersfield, and up the Colne Valley scores of mills are running day and night, but that cannot be said for Bradford and the worsted trade in general. Naturally, when woolens are in fashion worsteds are slack, and there is not that call for fancy worsted dress goods that Bradford manufacturers desire to see. There is a fair quantity of dress goods being sent abroad, but shippers say, as well as distributing houses, that fancy tweeds still hold the field. Evidence keeps accumulating of the extending use of cotton yarns, and if it were possible to get any reliable data as to the quantity of cotton yarns being consumed in Bradford and within a radius of ten miles, the amount would be appalling. Bradford finishers are months behind their deliveries of cotton goods, and dyers hardly know which way to turn.

Dealers in tops or combed wools in both merino and coarser fibred or crossbred Australian sorts are extremely confident that, in the near future, values of both these classes will show still further advance, and are, therefore, quite content to await the issue of events without trying to push their stocks on to the market. As there is certainly more merino going into consumption, both in this country and on the Continent, there is no reason to expect any

posted authorities seem to think that we may see still higher rates in the near future. Users of such goods as fine Amazon cloths, fine coatings, delaines, and other soft dress goods materials may, therefore, prepare themselves to pay distinct advances for any new purchases, and there is little likelihood of any material change in wool values before the latter part of the year.

A news item from Chemnitz, appearing in the "Dry Goods Economist," stated recently that numerous buyers for large importers had already arrived in this market. This is earlier than usual, and the reason of their presence at this time is more on account of the delays in deliveries of goods due in December and January, rather than for placing new orders. Notwithstanding large shipments are being made every week manufacturers simply cannot keep their promises. It will not be before July or even August before the last of the old orders are shipped. No cancellations are being received, however, owing to the fact that since the original orders were placed prices have gone much higher. On the contrary, everybody is clamoring for goods.

From Manchester comes word that a steady business continues to be done in the home trade houses, but it cannot be said that any particularly new event has occurred during the last week or two. It is reported by some people that the demand has hardly come up to expectations, but travellers state that the requirements of customers are considerably greater than at the same time twelve months ago, and clearances generally from the distributing houses are of a satisfactory character. Employment in most industries is keeping well up, and, of course, a matter like this is encouraging for people engaged in the home trade houses. The weather during the week has not been favorable for good clearances in the retail shops of spring materials. However, a better state of things may be looked forward to within the near future. Makers of fustians are very busy with orders booked some time ago. The demand, however, is chiefly for the poorer qualities. Most of the orders booked are for shipment abroad. Makers of waste goods are also busy, and have plenty of work to go on with.

The "Wool and Cotton Reporter," in a broad review of the woolen situation in and around Boston, says that the demand is unmistakably for wools grading quarter blood, and below rather than for the wools grading above quarter blood. Large quantities of these wools are going into dress goods and men's wear worsteds. One large Rhode Island manufacturer of men's wear worsteds has bought freely of wools of 46s. count, and one well-known dress goods mill took South Americans of 40s to 44s count; another bought freely of New Zealand. Wools which are just a trifle higher in grade than the Lincoln wools sell well. The New Zealand wools which are being shown are very tempting to dition, well grown, of strong staple and silky feel. One of the largest operators in these wools, in looking over an extensive pile of this kind of stock, in company with the writer, remarked that he had never seen the New Zealand wools in such good condition as they are this year. One reason why they are attractive, also, to the consumer is the fact that they are cheap, as compared with what it now costs to import such wools from London. There is little doubt among those who are ordinarily best posted with reference to the London market that prices at the next auctions will be fully sustained.

Were it not necessary the silk manufacturers would not buy a pound of silk at existing prices, for it is generally felt by the majority of buyers that prices are abnormally high, considering the status of manufacturing in this country and the demands from buyers. But it must be taken into consideration that the market has not by any means been dependent upon transactions in the local market. European consumption has been large and continues good. Were it not for this it is prophesied that radical declines would have been noted ere this. The local situation is healthy in one respect, and that is that manufacturers generally have practically no raw silk in hand, and, although many may have only a meagre supply of orders, and may be compelled to shut down, yet they will not be handicapped by any large supply of raw material in which a good deal of money can easily be locked up. Another factor, however, which causes firmness in the Japanese market is the growing scarcity of suitable material for this market.—New York Dry Goods Examiner.

UNITED STATES FINANCES.

The stock market begins to feel the San Francisco disaster more keenly than at first anticipated. Following the first shock there was a natural bracing together for resisting its consequences, but as the appalling extent of the calamity became more generally known values in a highly inflated market gradually began to yield. It is now estimated by good authorities that the toal destruction of property will approximate about $300,000,000. Probably not more than half this amount, or $150,000,000, will be covered by insurance; and of the losses which will have to be paid by the insurance companies more than half of that sum, about $70,000,000 or $80,000,000, will fall upon American companies, the balance being sustained by foreign concerns. Added to the actual destruction of property will be the disorganization and loss of business for weeks and months to come; so that it is yet impossible to calculate the real damage to trade and industry resulting from this catastrophe. By no process of intellectual juggling can such a wholesale destruction of property be turned into a bull argument. The loss is actual and tremendous, and must exert a depressing effect which, however widely distributed, will have to be endured. So far as Wall Street is concerned, its chief influence will be felt in the money market, which has been overtaxed by numerous insistent demands. High-priced stocks and high rates for money are utterly incompatible. Since there is little prospect of cheap money for some time to come it is inevitable that readjustment must be effected through liquidaion and lower prices for securities. Many of our railroads which have important improvements already under way are in urgent need of funds. A few of the shrewder corporations have already provided for themselves in advance but there are others which are not so prepared, and must come into the money market upon the best terms which they can secure. In this connection the reappearance of short-term railroad notes is a significant indication of monetary conditions.

The present tendency of the market is naturally downwards. Values are too high, and until money becomes easier stocks must decline. It is problematical whether or not the market is not on the edge of another fit of indigestion resulting from the enormous flotation of new stocks and bonds, a good portion of which are still awaiting buyers. There is a growing short interest in the market, which is an element of safety, and

will undoubtedly check any serious decline, and may, in fact, soon become large enough to induce sharp rallies. The fact that many of the big traders are turning proves a division of opinion which should become strong enough to stimulate further activity. A reasonable decline will be beneficial in various ways, not only checking reckless speculation and further inflation, but encouraging a return to normal conditions, more favorable to sustained activity than the recent speculative mania which upset all calculations based upon either good judgment or customary precedents. Any material addition to the present short interest will probably soon induce a temporary recovery.

RURAL CHANGES IN ENGLAND.

A correspondent's letter in "Commercial Intelligence" reminds the editor of that journal of the mighty upheaval there has been in the rural life of England—particularly in East Anglia—during the last thirty years. Gone are the old-fashioned farmers of our boyhood's days, the ancient gigs, the bins of port, the five-year-old wethers, and the huge rounds of beef. Gone are the days when the whole aim and object of the system of agriculture was to ensure a good wheat crop every fourth year; there is no four-course system now; few leases contain covenants preventing tenants from selling hay and straw; and no one dreams of digging up the corners of the headlands. Dozens of young men could put you up a barbed wire entanglement, not one could "make a fence" of blackthorn bushes. King Wheat is dead, the land is largely given over to pleasure farmers from the towns who have a competency and choose this way of spending it amid their incubators and barbed-wire fences. The labors have changed as their masters have done, the shoddy suit takes the place of the corduroy, and the insidious brown leather shoe displaces hobnails. No doubt there is much real improvement in the lot of the laborers; no doubt the new-fangled farming has much to commend it, but we country-born townsmen cannot mark without a pang the passing of the old time manners and customs that we knew so well. There will come a day when there will be nothing left to remind us of Victorian England save the ancient landmarks.

And yet with all the changes that have come over the countryside there has been very little progress made towards a state of things that would hold out more hope for the future than anything else. We refer to the desirability of co-operation among the farmers for mutual assistance and profit. In other countries the collection of milk, the making of butter, and marketing it are undertaken by societies in co-operation. There is nothing of that sort here. The American fruit-grower can get his fruit canned at a fixed price; here the unfortunate grower finds himself completely at the mercy of the salesmen in the market. If only farmers would unite they might, working together, undertake much that is entirely unprofitable to the individual now. The system under which the produce of the farm is handed about between the middlemen—each taking his profit—until reaches the consumer is one of the most disgraceful economic blunders in the whole social fabric. The private market, the privileged porters, and the unscrupulous salesmen ought to be swept away for ever. We want not less Government interference but a good deal more. Agriculturists have too long been crushed under the iron heel of their many taskmasters, and as a class they are not in the least likely to help themselves unless they are absolutely pushed in the right direction by a strong Government Department.

CYCLES AND MOTORS.

In its Birmingham correspondence of 18th April "Commercial Intelligence" has the following: "There has been, and still is, unprecedented activity in the factories, and at many of them a long spell of overtime. Large stocks have been accumulated in anticipation of the season's demand. In addition there has been two very good orders under execution—one for the Post Office and the other for the War Office. As far as manufacturing is concerned, the season is a long way in advance of the last one. Most firms have already increased the number of machines produced as compared with a year ago, and at the present rate of progress the final total should be well ahead of that for the whole of last year. There is a very fair demand, indeed, for motor cycles, and several firms are engaged upon European and Antipodean orders. That the tri-car trade is not defunct, as was prophesied not so long ago would be the case, is shown by the fact that Coventry firms, especially the producers of those from 6 to 10 h.p., are experiencing very satisfactory business. The motor-car trade is very brisk. The problem of the small car appears to have been satisfactorily solved, and the weekly output of all kinds of self-propelled vehicles is considerable. One establishment is busily engaged on orders for motor delivery vans."

FRESH FROZEN PORK SHIPPED TO BRITAIN.

It is much more difficult to ship fresh frozen pork to Great Britain from Australia than from Canada, yet the following shows what was recently done by the latter. The account is in the form of a letter from the consignees in Glasgow:

"The frozen pigs ex 'Waimate' have arrived, and we are glad to tell you that we consider them absolutely perfect in every respect. It was a genuine surprise to us to find that pigs could come such a distance and arrive here in such fine shape. We feel very enthusiastic about the whole business, and urge you to strongly recommend steady, regular shipments. The quality is really fine. The pigs are of a specially good breed and very suitable for the British markets. We brought the little shipment up to Glasgow, but we find that the sizes of this particular parcel were just rather light for this port, as the trade here chiefly use them for cutting up and

The FIVE per cent. Debentures issued by this Company afford the following advantages:

The investment can be converted into cash at any time after two years by giving sixty days' notice.

The issue of Debentures is limited to an amount not exceeding 75 per cent. of the Paid-up Capital of the Company.

The total amount of Debentures to be issued will not exceed 20 per cent. of the value of properties under Mortgage to the Company.

The Debentures issued by the Company will be a first charge upon the assets.

mincing purposes. We would advise your friends to send us along about 100 per week in all. We could do with, say, 30 to 50, averaging from 140 lbs. to 180 lbs. These we could dispose of up here in the north, and we are sure we would always get top prices for them. The lighter weights, running from, say, 70 lbs. to about 140 lbs., are more suitable for the south, and we would dispose of them in and around London, and also the other English markets. Some of our buyers at first objected to them being so hardly frozen. The result is that when thawed out the meat becomes very soft and does not stand well up to the knife when being cut out in small portions in the retail shops. If it were possible to send them along in good condition, only chilled sufficiently to keep them right, we think there would be a great big trade for this class of meat. You might have this matter thoroughly discussed, and perhaps it would be, in any case, worth your while to risk sending us, say, four or five pigs treated in the manner described, that is, only chilled, not frozen hard, and we could then see after they arrived here whether or not the experiment would be safe to extend."

DEBENTURES
FOR SALE.

Sealed tenders marked "Tender for Debentures" will be received by the undersigned up to 5 o'clock p. m. on Friday May 18th next, for the purchase of $132,410.26 of City of London four per cent. Local Improvement Debentures.

Forms of tender giving full particulars of the debentures can be secured on application to City Treasurer.

The highest or any tender not necessarily accepted.

JOHN POPE,
City Treasurer.

BE PERSISTENT.

There is no luck, for all practical purposes, to him who is not striving and whose senses are not all eagerly attent. What are called accidental discoveries are almost invariably made by those who are looking for something. A man incurs about as much risk of being struck by lightning as by accidental luck.

There is, perhaps, a seeming element of luck in the amount of success which crowns the efforts of different men, but even here it will usually be found that the sagacity with which the efforts are directed and the energy with which they are prosecuted measure pretty accurately the luck contained in the results achieved. Apparent exceptions will be found to relate almost wholly to single undertakings, while in the long run the rule will hold good.

Two pearl divers, equally expert, dive together and work with equal energy. One brings up a pearl, while the other returns empty handed. But let both persevere, and at the end of five, ten or twenty years it will be found they have succeeded almost in exact proportion to their skill and industry.

Stick to the thing and carry it through. Believe you were made for the place you fill, and that no one else can fill it as well. Put forth your whole energy. Be awake—electrify yourself—go forth to the task. Only once learn to carry a thing through in all its completeness and proportion, and you will become a hero. You will think better of yourself. Others will think better of you. The world in its very heart admires the stern, determined doer.—Success.

⁂

The net earnings of the Canadian Pacific Railway for the nine months ending with March 31st last amounted to $16,505,041, or an increase of no less than $5,452,626, or over 50 per cent., compared with the similar period a year previous.

⁂

The Canadian Pin Company, Limited, Toronto, has been organized to manufacture toys, fancy goods, notions, novelties, merchants' specialties, and to deal in them, both wholesale and retail, and act as commission agents. The capital of the new company is $100,000. George Morton, of St. Louis, Mo., and Herbert A. Clark, of Toronto, are among the provisional directors of the concern.

An Improvement in Silver Plating

How The **Toronto Silver Plate Co.,** Limited, increases the thickness of Silver on the wearing points of Spoons and Forks. A scientific test showing its practicability.

WHY? Because more Silver is deposited upon the wearing parts.

This sketch illustrates a Plating Vat, and explains how we deposit more silver, on the wearing parts. D represents rack loaded with spoons, suspended from rod C. A represents silver; 2 and 3 the backs of spoons, where the most wear comes. The backs being nearest the silver receive the deposit of plate faster than other parts, thus insuring a heavier plate than the same grade of goods plated in the usual methods by other manufacturers.

Goods plated by this patent process give you 20 per cent. more wear.

In buying Silverware insist on it being stamped
"TORONTO SILVER PLATE CO."
as the name guarantees the quality.

SCOTT & WALMSLEY,
ESTABLISHED 1858
Managers and Underwriters.

The Calgary Milling Company is making rapid progress with its new flour mill at Calgary, the largest, it is said, west of Winnipeg. The Western Milling Co. recently completed a 500-barrel mill at the same place.

The absence of ice in the Gulf is a feature of conversation among the captains and officers of the various vessels which have thus far arrived at Quebec and Montreal. This spring is quite uncommon in this respect.

At five o'clock on Monday last the steamship "Bellona" reached Montreal with a cargo of 56,000 packages of oranges and lemons. She came from Sorrento (April 6th) and other Mediterranean fruit ports. Her cargo is to be auctioned off in the course of a few days, as is the custom.

An increase of $211,527 over the same month of last year is shown in the amount of customs duties collected in the port of Montreal during the month of April. The duties of the month were $1,003,192, an unprecedented sum in the month of April. A year ago duties to the amount of $791,664.79 had been received.

The Crown Life Insurance Company

Head Office: Toronto, Canada.

Offers These Advantages to Insurers:

Lower Premium Rates than those charged by most other Companies.
Policies Indisputable from Date of Issue.
Loan Values Guaranteed after Two Years.
Cash Surrender and Paid-up Values Guaranteed after Three Years.

CANADIAN LIVE STOCK IN AUSTRALIA.

The establishment of the line of steamers running from Vancouver to New Zealand and then to Australia may afford an opening for thoroughbred Canadian stock, says Mr. J. S. Larke. The calm passages characteristic of the Pacific from the month of May to October should enable animals to be carried much safer than they can be brought around the long Atlantic passage. If the Canadian Live Stock Association would make an effort, and thus the possibilities of the Canadian market to furnish high-grade horses, cattle, pigs and sheep become known there would be, I believe, a steady demand for these animals. In the past there has been one or two propositions to attempt the trade, but the mail line of steamers had no facilities for carrying stock other than sheep, of which they carried some number of Merinos from Vermont. In New Zealand there should be a market for high-grade sheep of the mutton breeds. I am afraid that the trade will have to be begun by Canadian exporters, as Australians are not likely to seek the market until the stock of Canada are better known here.

⁂

The James Bay Railway Company (or Canadian Northern) has filed plans for its proposed lines from Montreal to Georgian Bay and from Toronto to Ottawa. The latter will strike easterly in a fairly straight line through the counties of York, Ontario, Durham, Northumberland and Hastings, at a distance north of the Grand Trunk varying from three to twelve miles until it strikes Lime Lake, in the north-east corner of the township of Tyendinaga. It will pass close to Tamworth, across the Kingston and Pembroke Railway at Reynold Station, run through Westport, pass a little north of Smith's Falls, and thence follow a northeasterly direction to the capital. The line from Montreal to Georgian Bay will follow the north shore of the Ottawa River to Grenville, and will cross the river in the neighborhood of Hawkesbury, continuing along the south shore to Ottawa. Ottawa River will be crossed near Arnprior, and again at Portage du Fort, and the Pembroke Southern half way between the Grand Trunk line to Parry Sound and the C.P.R. From here the railway will run straight as possible in a northwesterly direction to Key Inlet, on the Georgian Bay, from ten to twelve miles south of the French River.

The Metropolitan Life Insurance Co.

(INCORPORATED BY THE STATE OF NEW YORK)

The Company OF the People, BY the People, FOR the People

ASSETS, $151,663,477.29

Nearly three hundred thousand Canadians of all classes are policyholders in the Metropolitan. In 1905 it here in Canada wrote as much new insurance as any two other life insurance companies—Canadian, English or American.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec, Ottawa.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1905.

395	per day in number of Claims Paid.
6,972	per day in number of Policies Issued.
$1,502,484.00	per day in New Insurance Written.
$123,788.29	per day in Payments to Policy-holders and addition to Reserve.
$77,275.94	Per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave., New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $3,0000,00.00

More Than $7,000,000.

Over and above premiums received, more than $7,000,000 has already been paid or credited to its policyholders by the

LONDON & LANCASHIRE FIRE INSURANCE COMPANY

ESTABLISHED A.D. 1720
THE LONDON ASSURANCE.
Head Office, Canada Branch, Montreal.
TOTAL FUNDS, - - $20,000,000
FIRE RISKS accepted at current rates.
Toronto Agents
S. Bruce Harman, 19 Wellington Street East.

SUN INSURANCE OFFICE FIRE
Founded A.D. 1710
Head Office, Threadneedle St., London, Eng.

Transacts Fire Business only, and is the oldest purely Fire Office in the world. Surplus over Capital and all Liabilities exceeds $7,000,000.

Canadian Branch—15 Wellington Street East.
TORONTO, ONT.
H. M. BLACKBURN, - - Manager
J. A. STEWART, - - - Inspector
TORONTO AGENTS:
HIGINBOTHAM & LYON, Telephone M. 488.
IRISH & MAULSON, Telephone M. 178.
Agents Wanted in all Unrepresented Districts.

A Policy-Holder's Company

The North American Life Assurance Company has a Guarantee Fund of $300,000, of which $60,000 is paid up in cash. Interest is allowed on this paid up portion only. Policyholders thus obtain **additional security of $300,000** and what is of greater importance, are **assured of careful and conservative management** as the Guarantors are liable for this amount. By the Company's Act of Incorporation, every holder of a participating policy in the Company, upon which all premiums due have been paid, shall have one vote in person for each $1,000 of insurance held by him. Policyholders are thus given a **voice in the management** of the Company's affairs. In short, it may be said that the North American Life is neither a Mutual nor a Stock Company yet **possesses the advantages of both.**

Home Office - Toronto, Ont.

THE ROYAL-VICTORIA LIFE INSURANCE COMPANY
has on deposit
$267,000.00
with Dominion Government as Security for Policyholders.

New Business in 1905 increased 37% over previous year.

Expenses 5% less on Income

THE POWER BILL.

The Ontario Government's "power" bill, which has been looked forward to with so much interest, has at length been presented to the House. As was fitting, it was introduced by the Hon. Mr. Beck, and was styled "an Act to provide for the transmission of electrical power to municipalities." An important feature of the minister's speech was the statement that he had been assured by certain prominent capitalists that they stood prepared to construct works and deliver power at the prices mentioned in the report of the Hydro-Electric Commission, dealing with Niagara Falls. The general object of the bill, as its name implies, is to provide means by which the Government may associate itself with municipalities in order to obtain power and transmit it to the latter. The means by which it is hoped to attain this end is the establishment of a commission of the same name as that now existing, which would fix the rates of light, heat, and power companies in all parts of the Province. It would also have power to expropriate existing development plants and transmission lines on municipal account, and the undertaking of such works by the commission with money raised by the Government, but for which the municipalities thus supplied with power would pay eventually. It is not considered likely that these drastic clauses would be deemed necessary, but they are inserted in order that no obstacle shall be placed in the way of furnishing the people of Ontario with cheap power. Indeed, it has been stated that already one at least of the existing development and transmission companies has expressed willingness to enter into agreement with municipalities and distributing companies at rates to be fixed by the Commission. A feature worth noting in the new bill is that municipalities in receipt of power developed by the Government may distribute that power subject to conditions as to rates and otherwise, such as the Commission may from time to time prescribe.

When power is supplied by the Commission to railways and distributing companies, the net profit (if any), after making due provision for the cost of the works through which the power is supplied shall be applied in payment of the cost of maintaining any works that may have been acquired or constructed and operated by the Commission for that purpose.

So much for what may be termed the paternal feature of the proposed measure. That is to say, the attitude of the Government as a defender of the municipality or the manufacturer from possible excessive charges by the power-producing companies already, or shortly to be, in operation at Niagara Falls. Now as to its position towards the corporations whose stock has been subscribed and bonds issued, based upon earnings estimated in 1904 or 1905 on a certain cost of producing power. A strong current of opinion antagonistic to these corporations as so many monopolistic grabbers has arisen, largely, it may be said, as a result of certain *estimates* of cost of Niagara electric power laid before the Legislature this year. It is proper for a Government to take steps to prevent any set of capitalists from grinding the faces of their poorer brethren, but it is not wise to assume without absolute grounds—and no such grounds have ever been fairly stated—that these so-called rich barons are really unrighteous plunderers.

It has already been shown, (see "Monetary Times," 20th April), that the low estimates of the price of Niagara power given in the report of the Hydro-Electric Power Commission, are not justified upon full consideration of the circumstances. Mr. Stanley Richmond, an English electrical engineer, has given it as his opinion that, to take one example, instead of $16.53 per horse-power per year delivered at Toronto, the cost of Niagara electric energy would be 27.73 at that city. The report of the Commission, this gentleman says, has neglected in its estimate of $16.53 to allow sufficient for several elements of cost, in providing a 50,000 h.p. competitive line.

If it be true that the Government can get responsible men to agree to furnish power at any figure, based upon the cost last quoted, ($16.53 per h.p. at Toronto), instead of at a cost forty per cent. greater, there is ground for demanding that existing companies modify their intended rates. But it would be an unpardonable mistake to lead people all over the Province to expect power at a price for which it cannot be furnished. And it seems to us to be an injustice to the companies which have spent such enormous sums in preparing to furnish Niagara power to create an impression that they will exact from their customers forty, fifty, sixty per cent. more than a true statement of cost—never yet really ascertained—will disclose.

Finality in the cost of electric power, has not yet been reached. It varies with circumstances. The possibilities of successful transmission to great distances are not known; they are still in the experimental stage. It is premature, therefore, to say what can and cannot be done in this direction, but it is at least significant that one of the best plants in Europe, namely, that at Milan, charges over only a thirty-mile radius from 23 to 44 dollars per horse-power per annum, with manufacturers glad to get it at that. But the Ontario Government's advisers think, or hope, they can deliver power to points *ninety to a hundred* miles away for half the above average. We are not aware that it has ever been proved that this can be successfully done. And while uncertainty exists it is the part of wisdom to await what developments science may bring rather than insist upon terms that it may be impossible to exact. In the meantime, we may profitably rest awhile until certain things are demonstrated rather than hastily assume that what is hoped for can be accomplished in the domain of science or economics. To so legislate as to create a fear in the minds of investors that bonds or shares they have bought on the faith of a contract made with a former government may be insecure in value, is no light thing. And yet this very feeling of insecurity has been already engendered by some of the proposals of the present bill. The proposed unsettling legislation is injudiciously and needlessly hurried.

* * *

WESTERN ENTERPRISE.

A letter from a friend in Winnipeg speaks of the conspicuous loyalty to western institutions and western development which is practically universal, not only in Winnipeg but in all parts of the Great Canadian North-West. Each and every man out there seems to realize that the chances for complete success of that great country depend largely on his own efforts, and the consequence is that the people are working unitedly towards a common goal. It is a case of all for each and each for all; the smallest mite of effort is regarded as of value, because it goes to make up the huge aggregate of a million other efforts in the same direction. One can see the force of this belief working in Vancouver as well as in Winnipeg; in little hamlets of six frame buildings and a store, equally with the homesteads dotting the wide-spread prairies.

The idea now seems to be fast taking root in the western mind that not only rapid settlement of the land is good, but a bringing in of capital to invest in a thousand and one other enterprises. The people are becoming imbued with the aim of developing the waterpowers, of starting great manufacturing enterprises, of making the West a producer, not only of food, but of clothing, and of a dozen other products of human skill. They want to be able to buy the things they require in every-day life, manufactured in western factories by western labor, and by means of western capital; by capital that is being put to productive use right in their own midst. The selling and settlement of lands has lost none of its old hold, but westerners want their other capabilities to be taken advantage of. This they are working for in the typical capable, western way, and who shall say the aim will not be achieved to the full?

If, while they are thus earnestly and properly exemplifying their love for the West by working to make it great, they would try to remember that the East has also some share in and some pride in "our far-flung province line," they would be only doing justice to their perhaps more staid fellow-countrymen. With due humility we dare to remind our strenuous brethren of the prairie and the mountain that the West, however big and rosy, and potentially rich, is not "The Whole Thing."

* * *

THE CATTLE TRADE.

Cattle have been considerably easier in tone this week, taking the business as a whole, at the Toronto and Junction Stock Yards. In Montreal prices seem to have been maintained with less difficulty. The cause of the weakness in price would appear to be that dealers have come to the conclusion that they have been paying too high for ordinary animals. Drovers claim to have lost more money in the past month than they have made. The values realized in Great Britain for Canadian cattle are not sufficient to recoup exporters for freight, and expenses plus the purchase value of their stock. In Montreal the export season opened last week, when no less than six vessels left the harbor bound for English or Scotch ports; and having cattle and sheep on board. Prospects are not very encouraging, however, it is believed, for a good season's trade. In that city choice beeves have been selling for 5 1-4 to 5 1-2c. per pound; choice at 4 3-4 to 5c.; good at 4 1-4 to 4 1-2c.; fair at 3 3-4 to 4c., down to 2 1-2c. for really inferior. Supplies of sheep and lambs have been on the short side. The former have sold at 6c. per pound, and spring lambs at $3.50 to $6 each.

At the Toronto yards this week, the receipts of cattle, considering those of previous weeks, were somewhat liberal, and prices, as we have said, adopted an easier tone, and in a few cases went a little lower. This was particularly so with the medium and commoner grades of butchers' animals. The choicer sorts kept up fairly well, but few were offered. Buyers seem to have reached the conclusion that they can afford to wait a while for lower values. Local exporters are fairly well stocked, and trade in that line also was on the slow side. One or two choice animals for export purposes fetched as high as $5.25, but as a rule $5.15 was the highest limit, and the generality sold for materially less. Some stockers and feeders were disposed off for butchers' purposes, but not many were offered on the market. Sheep and lambs kept steady at $4.75 to $5.25 for export; and $3 to $6 for spring lambs. Hogs are quite firm, and in some country points, higher prices are being obtained. The prevailing price is $6.00 per hundred. On last market day at the Union Stock Yards, Toronto, some offerings were fairly good in quality, but many others were scarcely in as good condition as they should be. Practically all sold, however, though both butchers' and exporters' sold a few cents lower than last week.

Advices from Old Country centres state that the demand for cattle is not very active, good ordinary qualities of beef fetching from 9 to 9 1-2c. The sheep trade has ruled slow, but with good prices, young sheep bringing 14 1-2c., and lambs 15 1-2c. A Glasgow report of May 1st, speaks of some 750 United States and Canadian cattle being put on sale when business was very much slower, the number offered being much greater than the demand. The average top figure was 11 3-4c., while seconds and middling animals were hard to dispose of at 10 1-2 to 11c., with cows and bulls down to 9 1-2c. A report by the superintendent of London Central Markets, shows that the butcher bill of that city, or rather the quantity of meat passing through that institution, was in the first fifteen weeks of the present year 125,589 tons, compared with 122,837 tons last year; and of this 53,707 tons came from North and South America this year, compared with 48,580 tons in the same period of 1905. This enormous total would appear to indicate ample margin for the continued development of a large trade from Canada.

* * *

APRIL FIRE LOSS.

The fire loss for last month alone in Canada and the United States aggregated, according to the "New York Journal of Commerce," considerably more than the total of the whole of last year, or the year previous, the cause being, of course, the frightful calamity in San Francisco, which is now estimated to have been responsible for a wastage of $225,000,000. The total recorded losses this year up to April 30th, were $282,202,050, of which the values destroyed last month were represented by $237,501,150. Thus the loss of four months in 1906 greatly exceeds the loss of any recent twelve months of which there is record. Here are the figures in detail:—

	1904.	1905.	1906.
January	$21,790,200	$16,378,100	$17,723,800
February	90,051,000	25,591,000	18,249,350
March	11,212,150	14,751,400	18,727,750
April	23,623,000	11,901,350	237,501,150
Total 4 months.	$146,676,350	$68,621,850	$282,202,050
May	15,221,400	12,736,250	....
June	10,646,700	11,789,800	....
July	11,923,200	13,173,250	....
August	9,715,200	11,435,600	....
September	14,387,650	13,715,250	....
October	12,866,200	12,267,000	....
November	11,515,000	16,178,200	....
December	19,422,350	15,276,600	....
Total 12 m'ths.	$252,364,050	$175,157,800	....

Referring to the conflagration on the Pacific Coast, the "Journal" says:—"It has overshadowed all other losses and means the retirement or bankruptcy of two or three dozen insurance institutions, and an enormous amount of litigation. The fire insurance companies are not liable for the loss by earthquake, being responsible for fire damage only, and it will doubtless be found that many property owners will claim their buildings were damaged by fire only and uninjured by the earthquake. Disputes over the facts in such cases will be taken into the courts and hundreds of lawsuits are likely to clog the coast calendars for years."

* * *

FIRE INSURANCE IN CANADA IN 1905.

The business of fire insurance produced but cheerless results in the year of grace, 1904, which was a year characterized by great conflagrations, notably at Baltimore, Rochester, and Toronto. All the money that the companies operating in the Dominion took by way of Canadian premiums in that year was swept away, and the companies were "out" the amount of their management expenses, and something more. The total of the premiums taken by some forty companies in the calendar year 1904 was $13,169,882, but the losses were $14,191,847, leaving an underwriting loss of more than a million, besides expenses of from three to four millions more.

It was some compensation for such ill-fortune that the succeeding year proved a good one, since, allowing thirty per cent. for conducting the business there was left, after paying losses, close upon four millions of dollars to the good from the fire underwriting of 1905. The total net premium receipts for fire underwriting were $14,298,750; the losses incurred $6,200,664, which is 43.36 per cent.—a favorable proportion. Distinguishing between the different groups of companies, Canadian, British, and American, the first-named suffered the greatest ratio of loss, as the following table will show:—

Companies.	Premiums taken.	Losses incurred.	Loss per cent. of Premium.
Canadian	$3,026,436	$1,474,228	48.71
British	8,583,203	3,697,409	43.07
American	2,689,111	1,029,027	38.26
Totals	$14,298,750	$6,200,664	43.36

The bulk of the business done by the British companies, seventeen in number, their share of premiums being slightly more than 60 per cent. Next came the thirteen Canadian companies, which took in rather over 21 per cent. The share of the ten American companies was say 19 per cent. of the total premiums and their ratio of loss, (38.26 per cent.), was less than either of the other groups of companies. The aggregate of policies at risk at the close of the year was $1,340,057,000, the proportions held by the various groups not differing greatly from the ratios shown by premiums, though the Canadian companies exhibited an increase from 21 to 26 per cent. of the total, whereas the others had decreased to about 59 and 15 per cent. respectively.

In the extract from the advance abstract received from the Insurance Superintendent, which we print to-day on page 1,520, an extra column will be found added to the 1905 table giving the percentage of losses paid by companies in proportion to their premiums. This is a different ratio from that employed above in comparing groups of companies. It is something remarkable that with all the policies issued, many hundreds of thousands in number, no doubt, there are only seventeen cases in which payment of claims was resisted; these reaching $55,000 aggregate only.

—Hudson Bay continues to attract attention elsewhere, even if Ontario people seem scarcely alive to the possibilities of this great salt water sea which is within 300 miles, as the crow flies, of Lake Superior, closer indeed to Toronto than Montreal now is. A writer in the "New York Herald" of Saturday last, describing his recent travels over the Temiskaming Railway and the Algoma Central, speaks of the many charters granted to different companies to build railways connecting the lake cities with Hudson Bay, the supposed intentions of Wm. Mackenzie and James J. Hill, and adds that "throughout the British North-West it is regarded as one of the mighty probabilities of the future." The article, which is written from Winnipeg, after showing the difficulties of sending Canadian prairie grain at some future day by rail to Fort Churchill, and thence through Hudson Straits (navigable only 3 1-2 to 4 months in the year), says:—"The probability is that we shall have railroad connection with Hudson Bay within a couple of years, and that a large part of the game for Chicago, New York, Toronto, will come down over these roads. The country will then be filled with tourists, and the Hudson Bay region may be a favorite summer resort for the North American continent."

* * *

THE ANNUAL ASH HEAP.

Taking as his text the terrible conflagration in San Francisco, Mr. F. W. Fitzpatrick, consulting architect and secretary of the International Society of Building Commissioners, Washington, B. C., makes a strong plea for really fire-proof construction in congested centres. In the Pacific city it is true that the water protective service was ruined by the earthquake, and that to this extent the fire started and spread by means beyond human control. But even so, had the buildings been better constructed and more in conformity with what is actually known of the requirements by up-to-date builders and by city authorities, the loss might have been almost infinitely smaller.

The same lesson is to be learned from Baltimore and from other cities where there have been great conflagrations in the last few years. Sufficient strictness has not been exercised in having buildings of thoroughly fire-proof materials. The result is the enormous yearly waste by fire on the American continent. Insurance premiums are high, but notwithstanding this, even in years which may be called normal, the amounts the companies lose yearly are sufficient to stagger one. And a disheartening feature of the matter is that, whatever care we may take from this time forth, the proportion of buildings in the congested portions of great cities, which are properly constructed is so small compared with those which are hazardous that we can look for little improvement for years to come. The experience of Baltimore or San Francisco is, in the opinion of Mr. Fitzpatrick, quite likely to be repeated in New Orleans, or New York, or Boston, or any one of a dozen other cities on this continent at any time in the near future.

For this state of things he thinks the architects are to blame, and that the insurance companies share in that blame. All we can now do is, to put it, in his own words:—"To build well, to absolutely eliminate wood from the structural parts of buildings, to bar everything but entirely fire-proof structures in congested districts and to throw such safeguards about the old buildings as we can. For instance, if a roof requires shingling, don't shingle it with wood; use abestos shingles. If the sides of a house are rather dingy, the wood work rotted out, don't repair with wood, put on some form of metal lath and stucco the thing. As repairs become necessary, do the repairing even in highly inflammable buildings, with non-inflammable materials and thus little by little, less and less fuel will be offered for fire. When painting is necessary, use something that has been proved fire-retardant to at least a slight degree. In your new buildings close up your stair and elevator wells in fire-proof partitions; in your old ones use wire glass and metal. Minimize the fire risk everywhere you can. It is simply a matter of using less inflammable stuff and more intelligence."

* * *

SHEEP RAISING AND WOOL GROWING IN NOVA SCOTIA.

A sheep-raising conference was held at the Board of Trade rooms in Halifax the other day. Influential men from every part of the Province were in attendance; farmers, woolen manufacturers, members of Parliament, agriculturists, in fact, a general representation. It was a surprising response to a call for a meeting to consider the causes of the decline of sheep-raising and wool-growing in Nova Scotia, and to discuss means of restoring that industry to its former position. In the last decennial census period, the decline in sheep-raising amounted to 15 per cent., and in wool to 25 per cent. The output of wool in the Province in 1901 was 872,544 pounds as compared with 1,072,234 in 1891; whereas it was pointed out that we should be raising from three to six million pounds of wool annually. A number of reasons were advanced for this decline, all of which were reasonable. The dog nuisance was the cause of decline most insisted on, farmers having given up in despair after seeing their flocks repeatedly wiped out by marauding irresponsible dogs. The decline in the price of wool some years ago was another cause advanced; as was also the reason that has operated with the same effect in Australia, namely, the advanced price for meat, making it more profitable to raise sheep for the butcher than for the cloth-maker. As a result of the conference a strong committee was formed to attempt to remedy existing evils. They will disseminate information regarding the profits of sheep-raising in all parts of the Province, and endeavor to secure legislation dealing with the nuisances complained of. Almost the whole of the Province of Nova Scotia is eminently suited to the raising of sheep, and with proper attention it could be made one of our most important industries. It does not appear to have occurred to the farmers that one way of protecting sheep from dogs is folding them at night. There is a constant demand for domestic wool from the different woolen factories in the Province, and their proprietors are taking hold of the present movement and encouraging it in every way.

* * *

BELL TELEPHONE COMPANY.

An interesting discussion came up in the Parliamentary Committee meeting on Wednesday with reference to the Bell Telephone Company's bill to increase its capital stock from the present sum of $10,000,000 authorized ($9,000,000 paid up) to $50,000,000. This increased capital is deemed necessary by the directors in order to provide for the many improvements and extensions which may, some of which will, have to be made during the next ten years. It is explained that for new exchanges and subscribers' equipment $2,500,000 will be required this very year, for conduits and cable system, $900,000; for long distance, $700,000; for buildings and real estate, $400,000. As an illustration of the widespread investments made by the company throughout Canada it may be stated that its property in Ontario is valued at $5,500,000, in Quebec $4,500,000, in Manitoba $2,000,000, in the North-West $300,000. The company's proposals came in for some criticism on the part of several members of the committee. Mr. Lancaster expressed the view that such an increase in capital would make an enormous wall against any move for Government telephones in future and would create a great monopoly, while Mr. Cockshutt urged that no such increase ought to be made unless the company should stand to surrender its monopoly of municipal streets. Mayor Coatsworth, of Toronto, who was also present, spoke along similar lines. He asked that such an increase in capital stock should only be allowed under restrictions that would give the municipalities control of their own highways. Mr. Hartley Dewart, K.C., speaking on behalf of the city of Toronto, asked the committee to recognize the fact that the conditions which existed in 1880 when the Bell Company obtained its charter had changed, and a new set of conditions of a totally different character had arisen. The increase of $40,000,000 capital now asked for would make the Bell Company practically a new company, and the municipalities asked that the principle of municipal control of streets which was adopted and embodied in the bill chartering another telephone company in 1903 and confirmed in several charters for telegraph and telephone companies granted since should be embodied in the bill as a condition upon which the increase in capital was allowed. The discussion was quite lengthy, but no conclusion was reached by the time the meeting adjourned.

* * *

OUR AUSTRALIAN LETTER.

Since my last letter the rains then falling have been continued, till Australia, as a whole has been better covered than any time during the last ten years. Prices of its export commodities continue to be exceptionally high. The producers are happy and trade is expanding. The imports of the first three months of the year have not grown as rapidly as the exports, but still are slowly growing. Unfortunately Canada is not sharing in the advance of trade. In agricultural implements the Canadian exporters are enjoying a very good season, as there is a larger demand for cultivating machinery, which is now in season, than for a long time past. Last year they carried over a good many harvesters and reapers, and consequently the importations declined. This year there is no such stock to work off, and there are better prospects. The Canada Bicycle Company has closed its offices in all the States except at Melbourne in Victoria, and its trade has materially declined. The cotton companies are not supplying more than a third that their agents here say they could sell, but as they have a more profitable market in Canada and only send their surplus here, complaints cannot reasonably be made if they do not meet all the requirements of this country.

The Eastern Extension Company took the full limit of time for accepting or rejecting the agreement with the Australian Government as modified by the Commonwealth Senate, and then rejected it. This will lead to their abandonment of their offices in the Provinces of Victoria and Queensland, but offices will be retained in the other States through the agreements made with the Governments of those States prior to Federation. Mr. Deakin proposes to compel them to close their offices in Victoria and Queensland after a short shrift. This will give the Pacific Cable Company a better chance for fairly dividing the cable business, but it will be requisite for it, even now, to make a better fight than it has yet done. Mr. Reynolds is inspecting the cable stations in the Pacific, but is expected back in a short time, when he will determine the policy that is to be pursued.

A general election is to follow the next session of the Commonwealth Parliament, to begin a few weeks hence. It must take place not later than December and may a month or two earlier. The situation is unique until recently in a British country. The Premier, Mr. Deakin, asserts that the issue will be protection and free trade. The leader of the Opposition, Mr. Reid, declares that it will be no such thing, but will be Socialism and Anti-Socialism, with himself as leader of the Anti-Socialistic party. The leader of the Labor party, which is the mainstay of the support of Mr. Deakin, differs with the Premier, and he states that the issue will be old age pensions and progressive land tax and the nationalization of monopolies. Some of these gentleman are at the head of a united party. A section of the Protectionists—and a very influential one—has refused to follow the lead of Mr. Deakin, asserting that while they want protection they will not accept it at the price he proposes to pay for it to the Labor Party. Mr. Reid has two classes of opponents. He proposes to sink the fiscal question for the present, and to down Socialism, but the ultra-freetraders of the party declare that the fiscal question shall not be sunk, and they will make the election upon the question of freetrade and protection. Another section, while agreeing to a certain extent to the sinking of the fiscal question, have not agreed to accept Mr. Reid as the Anti-Socialistic leader, and want a much bolder programme than he proposes as the policy of the party. Two of these are commonly credited with the ambition to displace Mr. Reid for the leadership, and as one of them is Mr. Irvine, who achieved reputation as a strong man while Premier of Victoria, the displacement may possible take place later if not now. Mr. Watson is the leader of the Labor party, and is in no better plight than the other chiefs. He is a man who unquestionably showed good judgment in the leadership of the House when he was for a short time Premier, and as leader of his party since has given satisfaction to his following in the House, but he is unable to frame any policy. He and his party in the House had an understanding, if not a positive agreement, that they would not oppose the re-election of the members of the Deakin Government or the few followers that it has in control, but the Political Labor League, which controls the situation so far as labor politics are concerned, at its recent annual conference, repudiated this agreement, and told Mr. Watson that he would not be allowed to carry it out, that he must make no entangling alliances whatever and be governed by instructions from the League. Unfortunately the masses of the people are not very greatly interested in the squabble. The man on the land is content with good yields and good prices and he looks on with comparative indifference to the political struggle, even though the ascendency of the labor party might involve a progressive land tax, which the land owner believes means the confiscation of his property. The situation is French rather than British, and there promises for the next few months, to be a scrimmage which will be unequalled outside of Tipperary.

The Government of Queensland has secured a small quantity of Manitoba hard wheat through the Department of Agriculture of Canada. It is a curious thing that for a number of years efforts have been unsuccessfully made to secure clean seed wheat from Manitoba for this country. Why, it is difficult to ascertain, as letters to firms who have agreed to undertake it have remained unanswered. A little Manitoba hard wheat flour has come to Sydney via New York. More has been sent to West Australia than comes to the eastern side of the continent, and this flour took the route it did, because it was under option either to West Australia or Sydney. The price paid is £14 10s. per ton (about $7.25 per barrel), while local can be had at just half the figure. This high price, largely due to the duty, prohibits its use to any great extent.

The Governor-General of Canada has shown a good deal of tact in ordering samples of wine from Australia, with a view, if satisfactory, of using them in his household. Samples are being selected by the Commonwealth Government, which will likely go forward this month. This is a very small matter, but it is one of the small matters that carry a good deal more with it than appears on the face and this friendly act is appreciated here.

The unpleasant disagreements between the three Railway Commissioners of New South Wales has been under investigation by a Royal Commission, which has reported, condemning the acts of the three, but particularly that of the Chief Commissioner. This must lead to reconstruction. There may be room for a Canadian railway man here.

The last ship from Vancouver brought a number of vehicles from Messrs. Gray & Son, of Chatham. They came out in excellent condition, and will be exhibited at the coming Royal Society's Show. There is a probability that they will be handled in a much better manner than previous shipments of Canadian vehicles have been.

The reports of the Canadian Commissioner in Sydney must have something in them, because newspapers refer to one of which official notice was taken in London, and to another heard of through official reports from Washington.

The Commonwealth Government of Australia entered an action against the Comstock Medicine Company, of Canada, claiming £6,481 penalty for under-valuation of pills. The company entered them at the value of the pills as produced in America. The Customs Department claimed that they should be entered in proportion to their value as sold. The company reasonably held that a very large portion of the retail value was in the advertising done in Australia. The High Court gave judgment in favor of the Commonwealth Government so far as the valuation of the pills was concerned, but inflicted a penalty of only £5 upon the company, as there was clearly no evidence of any criminal intent to defraud, and further that the original entry by the company was justified by a decision of the Supreme Court of New South Wales in a similar case. The High Court of Australia and the Supreme Court of the State of New South Wales seem rarely to agree upon a decision. The £5 penalty is not an important sum, but unfortunately it carries with it very heavy law costs. There is a well-known opinion regarding the law; but even in that time it was unknown that a person making a Customs entry in accordance with the decision of a Superior Court should be penalized by another court for doing so. F. W.

Sydney, N. S .W., 9th April, 1906.

OUR NORTH OF ENGLAND LETTER.

Matters of finance have brought three distinguished Canadians, other than Lord Strathcona, to this side. Mr. E. S. Clouston, of the Bank of Montreal, heralded by our papers as the ablest banker in Canada is one. Mr. R. B. Angus, director of the same bank and of the C. P. R., is another. The third is the eminent engineer, Mr. James Ross, whose work on the Birmingham tramways and the Central London Railway has shown us the capabilities of the man whose name is linked with the Canadian Electric Company and the Electrical Development Company, of Ontario.

Amongst the articles Canadian buyers most persistently seek in Manchester are linen goods from the mills of Northern Ireland and Eastern Scotland. Embroidered linens especially are in vogue and deliveries of these are most difficult to get now that New York is buying heavily also. For the benefit of the disappointed I give some particulars of the distribution of linen exports last year. They will show that out of 166 million yards exported, 126 millions went to North America and the north Atlantic islands. There were 103 million yards for the United States and 11 million for Cuba in despite of high tariffs. Canada got 11 millions and the British West Indies one million. The Dominion is the third best market for our linens and Australia is the good fourth.

Smart work on the part of the Dominion's immigration agents is recorded. Trouble arose on Lord De Ramsey's estates in respect of allotments granted to villagers. Access to a few yards of land of their own appears to have aroused the farm laborers from their wonted state of servility to a truculent independence very distasteful to his lordship's larger tenants. Accordingly, the allotment-holders received notice to quit, and—fancying themselves very astute, indeed—the Australian immigration authorities sent round a lecturer with a magic-lantern to capture these desirable settlers for the Commonwealth. But Canada has its own motor-van and this vehicle laden with specimens of all manner of farm produce enabled Canada to get its invaluable "blow in fust." When the Australian was to appear in the evenings the enterprising boomster from Canada appeared in the preceding afternoon. No doubt the laborers enjoyed the spectacle—did not the late Lord Salisbury assure us that what agricultural England sincerely wanted was more circuses?—but we others have a point of view. Men with stamina enough to resist the feudal tyranny of unenlightened farmers, and with the skill and desire to work are folks we would like to make useful at home.

The Hon. John Dryden—none other than the ex-Minister of Agriculture for Ontario—is the man our Government has pitched on to assist the commissions of enquiry into the parlous state of agriculture in Ireland. It is entirely as it should be that Canadian advice is to be rendered to a country that has given the Dominion so many sons. Mr. Dryden is sanguine. He thinks, "of course, the practical principles applied to Ireland will yield the same results as in Ontario." We all hope so, but perhaps the ex-Minister has yet to experience fully the fatal vis inertiae of the Irishman at home. For some obscure reasons Irish sums will not come right in the Irish atmosphere, and Irish pupils are more teachable anywhere in the world than in their own country.

At last an English railway company follows Canadian precedent to the extent of opening a "bureau of facilities." From that department of the North-Eastern Railway Company, manufacturers and others will be able to learn all that they need to know of the localities along the system. The directors will hold the balance true between districts, not favoring one to the detriment of others, but according credit to each for its special fitness to become the homes of some particular sort of enterprise.

All the modern schemes for destroying the very roots of thrift, usurp thrift's name, and it is satisfactory to reflect that one of these came to an end before it could do any damage. The Birmingham & District Mutual Trading Co. issued cheques. Poor people were to buy cheques for £1 at a cost of 21 weekly payments each of a shilling. When five instalments were paid the purchaser was to be enabled to spend the cheque at certain specified stores. The loan was to be convertible into medical attendance, dentistry, furniture, clothes, cycles, pianos, photographs, and most other goods. Of course, if storekeepers will tolerate the intervention of third parties between themselves and their customers, and will take the risk of giving credit to such concerns as this doomed one, they must take the consequences. But why stomachs that reject trading-stamps should accept this aggravated form of the same evil is hard to imagine. The greater its business the greater the capital, or the credit, the "thrift" organization must require, and the greater the fall when something interrupts the steady flow of repayments.

Months must elapse before definite details of the losses of English offices in San Francisco are available. A semi-authoritative estimate assesses the potential loss at 130 millions of dollars, and the actual at 90 millions. Meantime, policyholders are deriving a little satisfaction from a parade of the sums of uncalled capital which constitute an important reserve. They are telling each other that the business of directors is to be just before being generous, and shareholders are not unanimously in favor of waiving earthquake clauses in policies in which those were operative. In the fervour of the moment, commentators who have really nothing to do with the business at all, seemed to propose that San Franciscans ought to be treated better than English losers would have been. Second thoughts provoke the suggestion that they should come off no better, and no worse than their level Englishmen. Time must be left to tell, and with a little difficulty we are realizing that time must be left, also, to pronounce on those vast demands for steel and for cement that are reported as sighted on the commercial horizon.

In another of their circulars to policy-holders the distinguished London committee who are advising their brothers in the Mutual Life of New York show a firm attitude. They cannot see how business in this country is to be successful under the present New York management. They anticipate heavy trading losses and the degradation of the entire concern into an agency for collecting current premiums. Their faith is pinned to the policy-holder's movements in America and England, and, failing that, to the separation of the British business from the parent organization. Adhesions are asked for, and the nominal subscriptions of 60 cents for each $2,500 of insurance. Though differences are many, on one point there is impressive unanimity. A settlement is wanted immediately.

Transferences of immigrant's funds to Canada are perhaps oftenest determined by the settler's own bankers, who transfer to their Canadian correspondents, whoever they may be. One Toronto bank, with a London house and Manchester agents, advertises its readiness in Manchester papers to take care of such sums. Room exists for considerable ingenuity in reaching and persuading the miscellaneous folk who venture abroad with funds to deposit, and bankers catering for such custom set themselves a knotty problem in settling the best way to reach the moneyed farmer economically.

North Country.

Manchester, April 27th.

INSURANCE INSTITUTE OF TORONTO.

On Tuesday, 8th instant, was held the annual meeting of the Insurance Institute of Toronto. The results of the examinations recently held by the Institute were announced at that gathering. The names of the sucessful candidates and the companies in which they are employed will be found below:—Manufacturers' Life—S. J. N. Glazier (Owen Sound), E. J. Howson, F. K. Howson, H. R. Lyne, G. B. Pattison, F. E. Pegler, E. T. Showler, D. A. Sinclair. Canada Life—J. H. Domelle, M. M. Keachie, C. C. Macklin, H. A. Parker, V. E. Reynolds, C. E. Robertson, R. Salmon. Imperial Life—C. Elvins. British America Fire—J. R. Addison, L. T. Carlisle, T. F. Charlton, W. E. Fudger, W. E. Hawkins, P. C. R. Keys, J. L. Noble. G. R. W. Thomas. Western Fire—Geo. Gresham, F. W. Hall, R. R. Martin, G. L. Moore, W. G. Thomson. Norwich Union Fire—Chas. Dowling, H. A. Joselin, F. E. Roberts. London & Lancashire Fire—E. M. Macrae. Atlas Fire—W. R. Purves. Manitoba Fire—P. Von Szeleski.

In the prize essay competition L. K. File, B.A., A.I.A., one of the staff of the Imperial Life Assurance Co., was awarded the prize of $25 for his essay on "The Past, Present and Future of Life Assurance."

The officers for the ensuing session were elected, and are as follows:—Honorary President, J. K. Macdonald, Confederation Life; vice-president, Percy C. H. Papps, A.I.A., Manufacturers' Life; vice-president, E. Williams, Imperial Guarantee & Accident; secretary, F. D. Macorquodale, Manufacturers'; treasurer, E. J. Harvey, North American; curator, H. W. Crossin, C.F.U.A.

Council—T. Bradshaw, Imperial Life; W. E. Fudger, British America Fire; C. H. Fuller, Continental Life; L. Goldman, North American Life; W. H. Gould, Sovereign Life; John B. Laidlaw, Norwich Union Fire; F. J. Lightbourn, Ontario Accident; W. C. Macdonald, Confederation Life; G. P. Payne, C.F.U.A.; A. H. Rodgers, Norwich Union Fire; F. Sanderson, Canada Life; H. A. Sherrard, Western Fire; A. Wright, London & Lancashire Fire.

* * *

NEW BUILDING METHODS AND NEW CONDITIONS.

The demand for speed, combined with efficiency, in building construction is daily becoming more and more of a requisite among owners, architects and engineers in Canada. The Dominion Engineering and Construction Company, Limited, recently organized with headquarters in Montreal, proposes to meet this need through the adoption of the "Gilbreth Cost-Plus-a-fixed-sum system" in contracting, and by being able to place an admirable organization at the disposal of any municipality, firm or man who employs it. The personnel of the company contains some well-known names in the Canadian engineering and building field. Randolph Macdonald, the president, is widely known as a contractor, and is also president of the Sovereign Bank of Canada. Henry Holgate, the vice-president, is one of the foremost hydraulic engineers in the Dominion, an authority on concrete, and its uses. Frank B. Gilbreth, the second vice-president, is known as an engineer and contractor of large experience, and as the exponent of the system under which the company will operate. Robert A. Ross, the secretary-treasurer of Ross & Holgate, consulting engineers, is an authority in matters relating to electrical engineering, and J. A. Aylmer, C.E., the fifth member of the board of directors has been identified with many large railway and canal constructions.

We are told that the Dominion Company has met with much success from the start; and the readiness with which Canadians have endorsed the Cost-plus-a-fixed-sum system has shown that the desire for progressive methods is fast supplanting the adherence to the old lump-sum form of contract. Speed in construction, coupled with low cost, and first-class work are the essentials on which the company bases its claims to confidence, and it professes willingness to undertake business only under the Gilbreth system, because it feels that only under this system can the best results be obtained.

* * *

BANKING AND FINANCIAL.

An addition will shortly be made to the building of the Ottawa Bank branch at Renfrew.

It is the intention of the Merchants Bank of Canada to erect a building for their branch at Ingersoll.

A branch of the Dominion Bank has been opened in Calgary, Alberta, under the management of Mr. E. W. Hamber.

A branch of the Traders' Bank of Canada has been opened at Edmonton, Alberta, under the management of T. F. S. Jackson.

A branch of the Metropolitan Bank is opened this week on the corner of Dunn Avenue and Queen Street West, Parkdale, Toronto.

The Home Bank of Canada has opened a branch in Shedden, near St. Thomas, Ont., with Mr. H. C. Ferguson, formerly of Glencoe, in charge.

A branch of the Bank of Montreal is now open for business at Mexico City, with Mr. T. S. C. Saunders as manager, and Mr. J. Forsyth as accountant.

The Bank of Montreal has bought, we are informed, a lot on the corner of Bank and Somerset Streets in Ottawa and will before long erect a branch office building thereon.

This week, a branch of the Imperial Bank of Canada was opened at London, Ont., under the management of Mr. Robert Arkell, formerly manager of the bank at Listowel. We also learn that Mr. H. C. Secord, formerly accountant at St. Thomas, has been appointed manager of the Listowel branch of the Imperial.

The City and District Savings Bank has already begun the erection of a new building on the north-east corner of Ontario and Maisonneuve Streets in Montreal, for the better accommodation of its branch there. There is no truth in the story of its proposed establishment of branches in St. Henry and St. Cunégonde.

It is the intention of the Eastern Townships Bank to erect a building on its property at the corner of St. James Street and Victoria Square in Montreal, and the management is awaiting plans which are being prepared. It is quite to be expected that the building when completed will be a credit to the bank and to the city.

The head office of the Sterling Bank of Canada, which opened its doors to the public on Tuesday of last week, at 50 Yonge Street, Toronto, is most artistically fitted up. The woodwork is the product of Jones Bros. & Co., of Toronto, and reflects great credit on the company, both in respect of good taste and excellence of workmanship. The effect is a most pleasing one.

Mr. Lyman J. Gage, former Secretary of the Treasury at Washington, has resigned as president of the United States Trust Company, of New York, and has been succeeded by E. W. Sheldon, for many years the company's attorney. James S. Clark, second vice-president of the bank, also resigned, and was succeeded by William M. Kingsley. Mr. Gage retires altogether from active connection with banking, and will enjoy a well-earned rest.

A plan is said to be under discussion in New York whereby certain bankers will establish a bank with a capital of $50,000,000, whose primary object will be the regulation of money rates and prevention of money stringency, with its accompanying high rates of interest. It is believed that such an institution might exercise considerable control over the foreign exchange situation by regulating imports and exports of gold.

What we believe is the first importation of British gold direct to Canada, is being made by the Royal Bank of Canada, per C. P. R. Royal mail steamship "Empress of Britain," now on the ocean from Liverpool on her maiden trip. She is said to carry in her specie room, the first consignment, amounting to $1,000,000, in sovereigns. Heretofore such imports have been made through New York, owing to the superiority up to the present time of ships running to that port.

According to a recent issue of Consular and Trade Reports of the United States, the six principal banks of Tokyo and Osaka, Japan, show fine profits for the last half of 1905. The capital of the Mitsui banks is $2,500,000, in addition to $3,200,000 reserves, and $130,000 surplus from previous account. Their six months' profits were at the rate of thirteen per cent. per annum. The Yasuda Bank's capital, including reserves, is $1,630,000, on which they earned fourteen per cent. The Mitse Bishi Bank has $1,572,000 capital and reserves, on which they cleared nineteen per cent. The Sumitomo Bank cleared seventeen per cent. on $1,810,000 capital and reserves. The Konoike Bank made ten per cent. on its $1,346,000. Finally, the Yamaguchi Bank cleared eleven per cent. per annum on $759,000 capital, reserves, and surplus. But it is generally believed that the actual banking profits are far greater than declared.

* * *

INSURANCE ITEMS.

Last week we noted that the Richmond and Drummond Fire Insurance Company, of Richmond, Quebec, had received a Dominion license. We now learn that Mr. J. H. Ewart, formerly Ontario manager of the National Assurance Company of Ireland, has been appointed chief agent for the Province of Ontario, with headquarters at Toronto. Mr. Judson G. Lee represents the company in Montreal. The company has been in existence since 1879, and has deposited $54,000 with the Ottawa Government.

As was to be expected from the severity of the effects of the San Francisco's calamity on the resources of the old country insurance companies, the stocks of many of them have dropped very considerably in value on the market. Among instances may be quoted the Commercial Union, quoted in London on April 1th last at 92-93, two weeks later stood at 77-79; Liverpool, London & Globe, fell from 52½, 53½ down to 45-47; London Ass. Corp, 73½, 74½ to 51-54; London & Lancashire Fire, 35-36 to 22-24; Norwich Union, 126-129 to 105-110; Phœnix, 41½-42½ to 35-37.

Burglary is getting to be too much like an exact science in the city of New York, according to "Harper's Weekly." Families that have been robbed are much dissatisfied with their experience. Families that have not been robbed dislike the feeling that they must perch at home like pigeons waiting to be potted. Insurance against burglary is getting to be as common among householders as insurance against fire. Possibly relief may come from this very practice of insuring against burglary. The board of underwriters is compelled by its business to be systematically alert to diminish the chance of fire losses. If burglary insurance becomes prevalent enough there may be a board of burglar fighters. whose business it is to abate house-breaking.

In the principality of Lippe-Dettmold, Germany, says the "Western Architect and Builder," record has been kept for eleven years of all trees struck by lightning. These showed that trees standing near water seemed to be most likely to be hit. and gave this table of comparative danger: Oaks, 100; els, 77; pines, 33; firs, 10; fir trees in general, 27; beeches, by far the safest of all forest trees, only, 2. It is a well-known truth to old farmers in the United States that oak trees are more frequently struck by lighting, and, therefore, are the most dangerous to seek refuge under. This is due to the fact that the oak has a deep root, which runs into the ground, while the beech has surface roots, scarcely covered by the soil.

LIFE INSURANCE MATTERS.

A paper was read before the Chicago Life Underwriters' Association recently by H. D. Wright, superintendent of a branch of the Metropolitan in Chicago, on "The Educational Value of Industrial Insurance." His paper gave in detail the history of industrial insurance from its start in England, and proved of great interest to his auditory. The association received and adopted a resolution from executive committee, condemnatory of rebating premiums. It reads: "The membership of the Chicago Life Underwriters' Association, recognizing the evils attendant on the practice of rebating, and desiring to promote among life insurance salesmen that high standard of business conduct for which most of the companies and associations stand, pledge ourselves to employ all reasonable means to suppress the pernicious practice wherever found. We take this action in recognition of our responsibility to our individual companies and to the beneficent instituton of life insurance, which now forms so important a factor in our social and economic life."

The Insurance Commission is still looking into the affairs of the Union Life Assurance Company, and of what has been called its patent attachment, the National Agency Company. From his replies to the enquiries of counsel it appears that what Mr. H. Pollman Evans does not know about certain Ontario unlisted stocks held by these companies would make a pamphlet of considerable size. His ideas of the value of shares are most peculiar. Questioned as to how and why certain shares in minor building and loan companies were acquired by his directors he explained that it was by way of exchange or swapping, most often at par. His measure of the value of these unlisted stocks seemed to be the dividend they paid; and he did not know, apparently, that there was any way, other than a Stock Exchange bulletin, of getting at the estimate placed upon unlisted stocks by the financial public. He was the man supposed to know more about such matters than any man in his office, and yet he paid par (not in cash, however, but in "trade") for shares that were valued outside, and sometimes quoted in newspapers at 80, 85, or 90. His illustration of his innate faith was something like this: If a stock paying six per cent. dividend was worth 85, one that paid seven per cent. must be worth 95. The character of its business and the quality of its directors did not occur to him, it seems, in coming to a conclusion as to its value.

* * *

—The municipality of Langford, Manitoba, rejected in a very conclusive manner a by-law providing for the establishment of a municipal telephone service under the Act passed at the last session of the legislature. This is the first test of public opinion since the legislation in question, but whether the result means that the people of that municipality are adverse to public ownership or merely to the form of it shaped by the Manitoba Government is not clear.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ending with Thursday, May 10th, 1906, as compared with those of the previous week:

	May 10.	May 3.
Montreal	$30,486,688	$32,156,309
Toronto	26,319,326	24,592,659
Winnipeg	8,486,179	8,151,545
Halifax	1,758,118	1,691,196
Hamilton	1,380,543	1,551,397
St. John	1,134,794	1,180,192
Vancouver	2,318,485	2,276,971
Victoria	851,658	767,267
Quebec	1,976,716	1,741,077
Ottawa	2,830,232	2,546,066
London	1,340,094	1,193,975
Calgary	973,257	....
Total	$79,856,090	$77,848,654

"The Gilbreth Cost-plus-a-fixed-sum System"

DOMINION ENGINEERING AND CONSTRUCTION CO. LIMITED,

Sovereign Bank Building, - - - - - - MONTREAL

DIRECTORS:

RANDOLPH MACDONALD, Contractor, President.
HENRY HOLGATE, Civil Engineer, Vice-President.
FRANK B. GILBRETH, Engineer & Contractor, 2nd Vice-President.
ROBERT A. ROSS, Mechanical & Electrical Engineer, Secretary-Treasurer.
J. A. AYLMER, C. E., Contractor.

The Dominion Engineering & Construction Co., Limited, has been organized to undertake the construction of all kinds of buildings, public works and industrial establishments throughout Canada.

It is prepared to accept Contracts for the construction of:

Office Buildings **Canals**
Factories **Railways**
Dams **Concrete Bridges**
Docks **Viaducts**
Complete Steam & Hydraulic Power Plants

The Company has unequalled facilities under the Gilbreth cost-plus-a-fixed-sum system of operation to insure the most rapid execution of its work consistent with economy and efficiency.

The Company solicits correspondence from municipalities, owners, engineers and architects.

A STRANGE VIEW OF LIFE INSURANCE.

Many wrong-headed ideas of the purport and meaning of life insurance have been promulgated, and not a few of them during the course of recent revelations. But for downright misapprehension and perversion of its first principles commend us to a little circular which, we understand, has been broadcasted by a certain New Jersey clergyman named Blanchard. His starting point is that the business of life insurance is "unethical on first principles, unnatural in methods and of no benefit to the large majority of policyholders" its chief motive being the enrichment of a few promoters and not the greatest good of the greatest number. His argument is in the main a resurrection of the old taunt that "you must die to win." True, in some measure, the man who insures his life and then dies young reaps in proportion a larger reward from his insurance (or rather his family does) than the man whose life is prolonged. But what is that but an incisive illustration of the fundamentally moral aspect of the business, namely, that the strong help to bear the burden of the weak. Mr. Blanchard also considers as "unnatural" the endowment plan whereby a man receives a fortune at a certain age, though in this, as in other expressions of opinion, he is rather difficult to follow. He claims that such a system is as though a person were required to attain a certain age before he could enjoy life. How so? Because a person puts away a certain portion of the surplus of his earnings not required now in order to have something in reserve when his earnings are liable to be less or perhaps nothing, how does that prevent his present happiness. One would imagine it would have the opposite effect by tending to make the future free from shadow and anxiety. But probably the reverend gentleman is beyond being persuaded by argument.

MINERALS IN EAST SASKATCHEWAN.

A good deal of attention lately has been attracted to the mineral resources of Cedar Lake, which is on the Saskatchewan River, north of Winnipegosis, and connected with Lake Winnipeg by a waterway at about longitude 53 degrees. The neighborhood abounds in a black sand from which, it is claimed, a fine grade of steel can be produced, gold and platinum, and other metals are also reported. Not only this, but Cedar Lake possesses some measure of fame from its amber deposits, which are said to be the only ones of any size outside of the Baltic. Mr. G. L. Dodds, who has been talking on the subject in Winnipeg, sees a great future for the northern part of Western Canada. West of the great lakes, he says, there is cobalt enough to supply the world. An exchange of that city tells us he "has samples of silver, of copper that can be beaten without smelting, of asbestos, of white quartz, hard enough to cut glass; and he grows enthusiastic in talking about coal in unlimited quantities between the Hudson Bay and the Peace River."

A proposal of Mr. Dodds is to get together a company of prospectors to be left by a whaling ship on the shores of Hudson Bay during the absence of the vessel on its expedition. The party would include an expert mining engineer, provincial land surveyor, and a geological expert. These would do their prospecting during the season and return with the whaling ship the following summer, when not only the proprietors of the whaler would be rich in whalebone, seal oil, etc., but also the prospectors would have made their fortunes by their discoveries of sources of mineral wealth. At least, this is a picture painted by Mr. Dodds.

* * *

The Bank of Toronto advises us that a branch of that bank has been opened at Merritton, Ontario.

Vault doors in Bank of Montreal and Royal Trust Company, Montreal
Three times larger and heavier than any other in Canada Doors and Vestibules weigh **60 tons**. Total weight of lining and doors **260 tons**
Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

J. & J. TAYLOR, Toronto Safe Works, Toronto.

Established 1855.

THE BACKBONE FORGOTTEN.

In the rush and excitement of the mining boom the agricultural possibilities of the Temiskaming district are being to a certain extent overlooked. The get-rich-quick idea has a powerful fascination for the human race and probably no better field for the cultivation of the appetite was ever opened than the spectacularly rich silver beds of this north country. The mining industry is here, and here to stay. It has been, and will continue to be, a profitable business, but that is no reason why the thousands of acres of fertile soil in the clay belt should be forgotten. The vast district surrounding and lying north of New Liskeard is fast filling up with farmers, it is true. It is difficult to estimate how many thousand settlers the country can boast, but certainly there is room and a good living, too, for many times the number. The clay belt is settled for thirty or forty miles north of this town and for twenty miles on either side of the railroad, but at the same time the available farming territory is scarcely scratched. So continuous and extensive has been the Dominion's advertisement of the Canadian West that the prairies are being rapidly settled. Why could not the Government agents now give some attention to the advantages offered in the fertile north?—Temiskaming Herald.

* * *

The London Street Railway Company intends, we understand, to increase its capital stock and bonds to $750,000 each. It is now engaged in constructing a new belt line in the southern part of the city.

STOCKBROKERS AND CLIENTS.

In the financial and commercial supplement to the London "Times" of recent date we find the following interesting article under this caption:—

Probably the earliest association that most of us connect with the Stock Exchange and its mysteries is the recollection of doing difficult sums in the arithmetic book which were described as "Stocks," and of wondering, while endeavouring to unravel their intricacies, how the broker could make a living out of the beggarly ⅛ per cent. that was given him for carrying out all the transactions that were set out for our torture. Later on in life, we are apt to regard the problem from a quite different point of view; the intricacy of the sum dissolves into comparative simplicity when we have a practical example of investment or realization before us, and the broker's modest commission is too often regarded by clients as a charge which is a good deal too high for the services rendered. The error of our youth, of course, is produced by the fact that the arithmetic book generally, for the sake of the pupil's calculative faculty, deals in comparatively small and intricate amounts, with the result that an hour's labor apparently leaves the broker with about seven and sixpence in his pocket, and that it also clings to its ⅛ per cent. for the sake of simplicity, regardless of the fact that brokers often charge more for certain kinds of transactions.

The Question of Commission.

The more grudging view that a great part of the investing public takes with regard to the charges incidental to purchases or sales of stock is generally based on a misapprehension of the expensive machinery and plant that a stockbroker has to maintain, and the amount of technical detail that is involved by the simplest transaction. The average client who has read books or magazine articles about the machinery of the Stock Exchange is apt to conceive his broker as lounging elegantly in the house or his office, or indulging in uproarious tomfoolery, until such time as his leisured chat, or schoolboy skylarking, is interrupted by the receipt of an order, when he strolls across the floor to a jobber who does the business for him in the course of twenty seconds conversation, and then returns to the serious work of amusing himself. This popular picture of the stockbroker and his business has a just sufficient connection with the facts of the case to make it interestingly misleading as a caricature. There are times when business is so slack and the orders received so unimportant that any work that a broker has to do may be compassed without much more effort than is described above; but then, in times such as these, it is safe to assert that the broker is not earning his office expenses. And this brings us to a point which has an important bearing on the question of commissions.

Clerical Work Involved:

For it must be remembered that the office expenses of a stockbroker are necessarily heavy in proportion to the amount of work done. When he has, as pictured above, booked his bargain with his jobber, the clerical work of the matter is only just at the beginning. First of all the contract has to be made out and checked, and the transaction has to be entered with the due solemnity and repetition involved by the system of Stock Exchange bookkeeping. Next morning the bargain has to be checked with the jobber's clerk, and when the account day approaches the client has to be written to, in many cases, so that his wishes may be learnt with regard to the bargain, as to whether it is to be completed or continued. As we are here dealing with matters of investment we will assume that the business is "real," that the stock if bought will be taken up and paid for, or if sold will be delivered. Either of these processes requires a great deal of complicated clerical work. In the case of a purchase the name and occupation of the buyer have to be written out on a form and sent through to the seller's broker, by means of the Clearing-house, or by passing the "name" through, if the security is not one dealt with by the Clearing-house, the transfer deed has to be made out, sent to the client for signature, and registered, and finally the certificate has to be despatched to the investor, due care being exercised to see that he receives any dividends or "rights" to which he is entitled at the time of purchase.

The Broker's Staff.

The above rough sketch of the clerical work involved by a simple purchase or sale indicates sufficiently the mass of detail that is involved by the working of a stockbroker's office. But this clerical work by no means exhausts the operations that have to be covered by a well-organized firm. An enormous amount of correspondence has to be carried on, much of which may or may not lead to business, and in big offices the mere correspondence apart from the bookkeeping work takes the whole time of a staff set apart for it. Then there are some clients—especially provincial brokers—who expect to be kept posted concerning the hourly fluctuations of markets, and this is a business which involves constant patrolling of the house and a steady stream of telegrams, chronicling prices and tendencies. Finally, some well-found offices, in which the partners pride themselves on having all available information on financial matters pigeonholed for production at a moment's notice, keep a regular statistical staff, whose sole business it is to keep company reports, traffics, and other matters properly recorded, so that if a client asks a question concerning any company or security, a full and accurate answer may be immediately forthcoming.

Unpaid and Thankless Tasks.

And be it remembered that all this correspondence and statistical work is only indirectly remunerated. The lawyer who charges for every letter that he signs—even those making an appointment or acknowledging the receipt of a document—may well consider with commiseration the position of the stockbroker, who may correspond for a week for nothing, if the client finally decides that a change of investments concerning which he has been writing and receiving reams of suggestions and replies, is on the whole undesirable. For the broker charges only for business actually done, and unless his labor ends in a contract he has lost his time and energy. And perhaps worse than the correspondence that he has to conduct without remuneration, is the tax involved on his time and patience by endless interviews with garrulous clients who come to his office and palaver for hours, with no definite notion as to what they want to do except that they expect to be made aware of stock and shares yielding impossibly high rates of interest, and yet backed by unimpeachable security and absolutely certain to improve in capital value.

Financial Omniscience Expected.

All this, as we have said, is done for nothing by the broker, and yet clients seem to take it as a matter of course and to suppose that his time and energy are at their service to an unlimited extent, as long as they occasionally give him an order. They also have a habit of expecting him always to be able to deal at the middle price, robbing his jobber of the "turn" which is his due, and to know, with unfaltering exactitude, the future course of markets, and the movements to which the prices of all kinds of securities will be subjected during an indefinitely extended future. It does not seem to occur to clients of this type—who are quite common—that any broker who was really possessed of this knowledge would inevitably cease to trouble himself with other people's investments, and would by merely backing the knowledge with which he is credited as a matter of course, rapidly acquire the fortune to which its possession would certainly entitle him. This consideration never seems to strike the client, who expects certain knowledge of the future to be at his or her service gratuitously, and feels hurt and aggrieved when securities that are recommended decline, and is only too apt to forget to be grateful if they improve in value.

The Speculative Client.

Clients who speculate give their brokers less trouble, in some respects, than the real investor, and are more profitable, as long as they pay their differences when markets go against them. Less clerical work is involved by a bargain that is opened and undone than by one which is carried through to a genuine purchase or delivery of stock, and the

The Merchants Bank of Canada

Notice is hereby given that a dividend of 3½ per cent. for the current half-year, being at the rate of 7 per cent. per annum upon the Paid-up Capital Stock of this Institution, has been declared, and that the same will be payable at its Banking House in this city, on and after

Friday the 1st day of June Next.

The Transfer Books will be closed from the 17th to the 31st day of May next, both days inclusive.

The Annual General meeting of Shareholders will be held at the Banking House, in the City of Montreal, on

Wednesday the 20th day of June

next. The Chair will be taken at 12 o'clock, noon.

The Agency of Colonial and Foreign Banks is undertaken and the Acceptances of Customers residing in the Colonies domiciled in London, retired on terms which will be furnished on application.

amounts dealt in are generally larger, and the dealings are naturally more frequent. On the other hand, the speculative client often expects to be told continually all about everything that is happening or is going to happen, and his habit of finding it inconvenient to meet his differences when his speculations go awry is a frequent cause of disaster to his broker, who has to find the money himself, or declare himself a defaulter. A great source of danger is the client who opens speculative accounts with several brokers at once, with the result that they all of them believe that he is fully able to meet the liabilities involved by his speculations, until they suddenly find themselves all closing commitments for the same account. With all these anxieties and responsibilities, expected to render many important services gratuitously, and to deal, when business finally results, for commissions which are cut to the bone by the stress of competition, the stockbroker can hardly be regarded as a member of the community whose labor is not worthy of its hire.

* * *

B. C. LUMBER FOR SAN FRANCISCO.

The United States Government has decided, in spite of opposition from Oregon and Washington lumbermen, to rebate the duty of $2 per thousand on British Columbia lumber shipped to San Francisco, and this, together with the great demand which lumbermen believe will soon begin for rebuilding purposes in that city, is likely to cause an advance in Western prices. Many of the large mills in the Province are already so "full up" with orders that they will not be able to ship to California, but others, it is said, are making rapid preparations to do so, and as they have the advantage over their Puget Sound competitors in not being bound to ship by vessels of any one nationality they may be expected to do quite a large business.

The Sound lumberman can only ship his product to San Francisco on American bottoms, because the United States coasting laws prevent foreign vessels trading between two ports on the American coast. American tonnage is not available in any great quantity, and the Sound millmen will find it almost impossible to secure transportation. British Columbia lumbermen are cabling to Europe in an endeavor to find steamers or sailing vessels on the Pacific open to charter for this lumber trade.

* * *

—The continued growth of the Canadian West is shown by the figures of homestead entries filed at the Regina office. In April they numbered 1,518. This, we believe, is the largest number of homesteaders ever filed at the office in one month, and is ahead of the record for April, 1905. The total for the ten months from June 30th, 1905, is 8,786, compared with 7,968 for the whole of the previous year.

* * *

—The railway tunnel beneath the river Detroit is assuming definite shape. Construction may be said to have begun. An 18 x 58 foot shaft has been sunk on the United States side of the river to a depth of 67 feet, and one the same size has been sunk 84 feet on the Canadian side. A number of bids for the construction have been received, but it is not yet decided whether it will be done by day work or by contract. The actual tunnel construction will cost approximately $7,000,000, and the electrical equipment about $2,000,000 more, as it is definitely decided to use electrical power transmission. The time to complete the tunnel will be about three years. The annual meeting of the Michigan Central Railroad Company stockholders was held in Detroit last week, when the following directors were elected: William K Vanderbilt, Frederick W. Vanderbilt, Chauncey M. Depew, Henry B. Ledyard, Samuel F. Barger, Hamilton McK. Twombly, William H. Newman, J. Pierpont Morgan, William Rockefeller, James Stillman, George F. Baker, William K. Vanderbilt. Jr., William C. Brown. All are New York men except Messrs. Ledyard, who lives in Detroit and Brown in Chicago. The International Tunnel Company directorate has practically the same personnel.

The Traders Bank of Canada

Notice is hereby given that it is the intention of the Traders Bank of Canada, after publication of this notice for four weeks in the "Canada Gazette" and in a newspaper published in the City of Toronto, to apply to the Treasury Board for a certificate approving of the following by-law of The Traders Bank of Canada:

At a special General Meeting of the Shareholders of the Traders Bank of Canada. held at the Head Office of the Bank, in Toronto, on the 17th April, 1906, the following By-law was passed:

BY-LAW NO. 14

A BY-LAW TO INCREASE THE CAPITAL STOCK OF THE TRADERS BANK OF CANADA.

WHEREAS the capital stock of The Traders Bank of Canada is $3,000,000, divided into 30,000 shares of $100 each, the whole amount of which has been taken up;

AND WHEREAS the greatly increased business of the Traders Bank of Canada necessitates provision for a larger amount of money than is now at the command of the Bank;

AND WHEREAS the extending of the Bank's operations to Manitoba and the Western Provinces having been determined upon and premises opened, greater facilities are required on the part of the Bank for carrying on its business in these localities;

AND WHEREAS the future prospects of the Bank appear to warrant such reasonable increase of capital as will meet the present and immediate future requirements of the Bank's operations;

BE IT THEREFORE ENACTED by the shareholders of the Bank assembled at the Special Meeting held at the Head Office of the Traders Bank of Canada, the 17th day of April, 1906;

(1) THAT the capital stock of The Traders Bank of Canada be, and the same is hereby, increased by the sum of Two million dollars, divided into 20,000 shares of $100 each.

(2) When the directors so determine, and from time to time as they think fit, the said increased stock shall be allotted to the then shareholders of the Bank pro rata, and at such rate as is fixed by the directors, but no fraction of a share shall be so allotted; provided that in no case shall a rate be fixed by the directors which shall make the premium (if any) paid or payable on such stock so allotted exceed the percentage which the reserve fund of the Bank then bears to the paid-up stock thereof.

(3) Any stock allotted from time to time which is not taken up by the shareholder to whom such allotment has been made within six months of the time the notice of the allotment has been mailed to his sddress, or which any sbareholder declines to accept, or, any shares which shall not be alloted by reason of the provision hereinbefore contained against the allotment of fractions of a share, may be offered for s bscription to the public, at such time, in such manner, and on such terms as the directors may prescribe.

OVER A MILLION D A

THE RISE AND DEVELOPMENT OF WHAT IS NOW THE LARGEST PUBLISHING BUSINESS IN THE WORLD

Reprint from "Profitable Advertising," Boston.

The Harmsw

The history of journalism includes no more startling story of rapid progress than that afforded by the rise and development of the gigantic newspaper combination founded and controlled by Lord Northcliffe.

Eighteen years ago—on June 12th, 1888—appeared the first number of a small penny weekly entitled, "Answers to Correspondents." It was managed and published in one small upstair room at 26 Paternoster Square, London. Alfred Harmsworth was proprietor, manager, editor and publisher, combined in one. His capital was the very modest sum of £1,750, and the circulation of this new venture for the first week was 13,000 copies.

Mammoth Total Circulation.

From this small beginning has grown with unexampled rapidity the business of the Amalgamated Press, Limited, owning forty weekly and monthly papers and magazines, with a circulation which the week before writing amounted to 6,033,320 copies, in spite of the fact that the present season is an exceptionally dull one in the English publishing world.

The net profits of this business have grown by leaps and bounds, from the first annual report in 1890, when they amounted to £1,097, 3s. 1d., until they have reached the gigantic amount of £270,012 8s. 5d., in a single year. It must be borne in mind that these figures do not include any of the daily newspapers controlled by Lord Northcliffe.

Ideas That Won.

"Answers" owed its continual existence to a series of most brilliant journalistic efforts. Free trips to Paris were offered as prizes to its readers, and the English public was startled by a series of original and unprecedented offers culminating in a prize of £1 a week for life, which was won by a soldier. "Answers" was soon placed on a permanent footing, and then the founder began to set in operation the principle of combination which has since been so largely followed and imitated throughout the publishing world.

One of the secrets of the gigantic success of the Amalgamated Press has been that as soon as a periodical is well established it shall nurse a daughter paper. When this has gained its footing the two combine to introduce and carry on a third, and so on. It will be readily seen that this system of co-operation and inter-advertising is capable of almost infinite development, and that the otherwise inevitable enormous cost of "booming" a new publication—which has been the secret of the premature death of so many journalistic ventures—is very largely avoided.

More Harmsworth Papers.

After the establishment of two comic journals, in November, 1891, was published the first number of "Forget-me-Not," the leader of a series of highly successful papers devoted to women's interests, among which are included "Home Chat," "Home Circle," the "Woman's World," the "Girl's Friend," and the recently issued monthly magazine, the "World and His Wife."

In 1892 after two enlargements of premises a large printing works was founded under the name of the Geraldine Press. This was the first of the seven huge establishments, fitted with the most up-to-date plants, which are now engaged in printing the various Harmsworth publications. The same year saw the commencement of a series of weekly papers for boys.

Religious Papers.

In July, 1894, the firm published the first number of the "Sunday Companion," a religious journal, made interesting to the general body of the people. Its success was immediate, and it is now the largest circulated religious journal in the world. The new department thus founded has subsequently produced the "Sunday Circle," "Sunday Stories," the "Home Companion," "Golden Stories," "Horner's Weekly," "Horner's Pocket Library," and took over an old established weekly, "Horner's Stories."

A Phenomenal Success.

In July, 1898, Lord Northcliffe founded the "London" Magazine, which reached a circulation of 1,100,000 copies with its second number, a success without an equal in the history of magazine production.

A special edition of the "London" Magazine for Canada and the States has been ordered by the Toronto News Co., for all the branches of the American News Company, and will be published here by C. H. Murray.

Other monthly magazines issued by the firm include the "Connoisseur"—the leading illustrated magazine devoted to art and collecting—and the "World and His Wife." This last, which was first issued in November, 1904, was conceived on entirely novel lines, and at once attracted widespread interest.

In October of last year the Harmsworth Self-Educator was published in England, and has already found its way into more than half a million British homes. On December 14th, a special edition for Canada was published here by C. H. Murray, and met with a sensational success. So great has been the demand that arrangements are now being made to supply orders in the States that will reach half a million copies every month.

These are but a selection of the publications of the Amalgamated Press, Limited.

Profitable Mediums.
